What ensures that architecture documentation is aligned with business capability goals?

- A. Capability Mapping
- B. RACI Grid Builder
- C. Fact Sheet Owners
- D. Lifecycle Milestones

**Answer: A**

Explanation:
Capability Mapping links business capabilities to applications, interfaces, and technologies. This mapping ensures that architectural artifacts remain connected to strategic business objectives. By organizing IT components according to the business capabilities they support, organizations can validate whether their architecture aligns with transformation goals and identify redundancy, gaps, or misalignment. Other options may support governance tasks, but only capability mapping directly assures alignment with business capabilities.

## NEW QUESTION # 20
What is the RISE with SAP Methodology Dashboard used for?

- A. Displaying ERP licensing data
- B. Showing clean core status and extensibility KPIs
- C. Managing project methodologies
- D. Displaying SAP S/4HANA roadmaps

**Answer: B**

Explanation:

The RISE with SAP Methodology Dashboard, also known as the Clean Core Dashboard, provides a centralized view of how closely a customer's SAP S/4HANA system adheres to clean core principles. It monitors system characteristics such as configuration quality, extensibility usage, custom code volume, upgrade readiness, and adherence to recommended SAP development patterns. This dashboard enables project and IT teams to identify potential risks, unnecessary modifications, and areas where the system may diverge from SAP's cloud-readiness standards.

By monitoring extensibility usage-such as in-app extensions, side-by-side development, and classic enhancements-the dashboard helps ensure the transformation project remains aligned with SAP's modern cloud principles. This is critical in safeguarding system longevity, reducing technical debt, and preparing systems for continuous innovation.

The dashboard does not display licensing data (A) or roadmaps (B). While it supports methodology enforcement, it does not "manage" methodologies directly (D). Instead, it provides visibility and governance around clean core adherence, helping ensure transformation activities remain within SAP-recommended boundaries.
