- C. rwxrws---
- D. rwSrwx-rw-
- **E. rwxrwxrwt**

Answer: E

Explanation:

The sticky bit is a special permission that prevents users from deleting or renaming files that they do not own in a shared directory. The /tmp directory is used for storing temporary files that may be created by different users and processes, so it needs to be accessible and writable by all, but also protected from unauthorized deletion or modification of files. The rwxrwxrwt permissions can be set by using the chmod command with either the octal mode 1777 or the symbolic mode a+trwx. Reference: : [File system permissions] : [Sticky bit] : [chmod]
