Pass Guaranteed Latest SAP - C_BCBDC_2505 - SAP Certified Associate - SAP Business Data Cloud Vce Torrent

Are you aware of the importance of the C_BCBDC_2505 certification? If your answer is not, you may place yourself at the risk of be eliminated by the labor market. Because more and more companies start to pay high attention to the ability of their workers, and the C_BCBDC_2505 Certification is the main reflection of your ability. And our C_BCBDC_2505 exam question are the right tool to help you get the certification with the least time and efforts. Just have a try, then you will love them!

The authority of SAP C_BCBDC_2505 exam questions rests on its being high-quality and prepared according to the latest pattern. SAP Certified Associate - SAP Business Data Cloud is proud to announce that our SAP C_BCBDC_2505 Exam Dumps help the desiring candidates of SAP C_BCBDC_2505 certification to climb the ladder of success by grabbing the C_BCBDC_2505 Exam Questions.

C_BCBDC_2505 Test Prep is Effective to Help You Get SAP Certificate - VCEDumps

Getting the SAP C_BCBDC_2505 certification exam is necessary in order to get a job in your desired tech company. Success in the SAP Certified Associate - SAP Business Data Cloud (C_BCBDC_2505) certification exam gives you an edge over the others because you will have certified skills. The SAP C_BCBDC_2505 certification exam badge will make a good impression on the interviewer. Most of the people planning to attempt the C_BCBDC_2505 Exam are confused that how will they prepare and pass C_BCBDC_2505 exam with good grades. Many don't find real C_BCBDC_2505 exam questions and face loss of money and time.

SAP Certified Associate - SAP Business Data Cloud Sample Questions (Q73-

Q78):

NEW QUESTION # 73

In an SAP Analytics Cloud planning data model, which dimensions are included by default? Note: There are 2 correct answers to this question.

- A. Entity
- B. Organization
- C. Date
- D. Version

Answer: C,D

Explanation:
When creating a planning data model in SAP Analytics Cloud (SAC), certain dimensions are included by default to facilitate common planning scenarios. The two key dimensions automatically present are Version and Date. The Version dimension is crucial for distinguishing between different planning scenarios, such as "Actual," "Budget," "Forecast," or "Plan 2025," allowing users to compare and manage various iterations of their planning data. The Date dimension, on the other hand, is essential for time-based planning and analysis, enabling data entry, aggregation, and reporting across different time granularities like years, quarters, months, or days. These default dimensions provide a robust framework for financial and operational planning, serving as foundational elements around which planning activities are structured, and ensuring consistency and comparability across different planning versions and time periods.

NEW QUESTION # 74

Which entity can be used as a direct source of an SAP Datasphere analytic model?

- A. Business entities of semantic type Dimension
- B. Remote tables of semantic type Text
- C. Tables of semantic type Hierarchy
- D. Views of semantic type Fact

Answer: D

Explanation:
An SAP Datasphere analytic model is specifically designed for multi-dimensional analysis, and as such, it requires a central entity that contains the measures (key figures) to be analyzed and links to descriptive dimensions. Therefore, a View of semantic type Fact (B) is the most appropriate and commonly used direct source for an analytic model. A "Fact" view typically represents transactional data, containing measures (e.g., sales amount, quantity) and foreign keys that link to dimension views (e.g., product, customer, date). While "Dimension" type entities (A) provide descriptive attributes and are linked to the analytic model, they are not the direct source of the model itself. Tables of semantic type Hierarchy (C) are used within dimensions, and remote tables of semantic type Text (D) typically provide text descriptions for master data, not the core fact data for an analytic model. The Fact view serves as the central point for an analytic model's measures and its connections to all relevant dimensions.

NEW QUESTION # 75

What are the three primary access levels you can assign when sharing files?
There are 3 correct answers to this question.
Response:

- A. Read/Write
- B. Edit
- C. Full Control
- D. View
- E. Read Only

Answer: B,C,D

NEW QUESTION # 76

Why would you choose the "Validate Remote Tables" feature in the SAP Datasphere repository explorer?

- A. To detect if remote tables are defined that are not used in Views
- B. To test if data has been replicated completely
- C. To identify structure updates of the remote sources
- D. To preview data of remote tables

Answer: C

Explanation:
The "Validate Remote Tables" feature in the SAP Datasphere repository explorer is primarily used to identify structure updates of the remote sources. When a remote table is created in Datasphere, it establishes a metadata connection to a table or view in an external source system. Over time, the structure of the source object (e.g., column additions, deletions, data type changes) might change. The "Validate Remote Tables" function allows you to compare the metadata currently stored in Datasphere for the remote table with the actual, current metadata in the source system. If discrepancies are found, Datasphere can highlight these structural changes, prompting you to update the remote table's definition within Datasphere to match the source. This ensures that views and data flows built on these remote tables continue to function correctly and align with the underlying source structure, preventing data access issues or incorrect data interpretations.

NEW QUESTION # 77
You want to combine external data with internal data via product ID. Although the data may be inconsistent, such as the external data contains the letter "O" where the internal data contains the digit 0, you still want to combine them. Which artifact should you use for matching?

- A. Entity Relationship Model
- B. Graphical View
- C. Analytic Model
- D. Intelligent Lookup

Answer: D

Explanation:
When faced with the challenge of combining data from different sources where the matching keys (like "Product ID") are inconsistent or contain variations (e.g., "O" vs. "0"), the recommended artifact in SAP Datasphere for such fuzzy or approximate matching scenarios is an Intelligent Lookup. An Intelligent Lookup (D) leverages machine learning capabilities to identify and map records that are semantically similar but not exact matches. Unlike standard joins in graphical views or SQL views which require precise key matches, Intelligent Lookups can handle data quality issues, typos, and variations, allowing you to successfully link disparate records that would otherwise be missed. This is particularly valuable when integrating data from external systems or legacy sources where perfect data standardization is not feasible, ensuring a more comprehensive and accurate combined dataset for analysis.
