NEW QUESTION # 15

Which component of SAP AI is responsible for automating routine business tasks? Please choose the correct answer.

- A. SAP Conversational AI
- B. SAP AI Core
- C. SAP S/4HANA Cloud
- D. SAP Intelligent RPA

Answer: D

Explanation:
SAP Intelligent RPA is the primary component of SAP AI responsible for automating routine business tasks, combining robotic process automation with AI capabilities. The correct answer is SAP Intelligent RPA, as it is explicitly designed for this purpose. SAP documentation states: "SAP Intelligent RPA automates repetitive business tasks such as data entry, document processing, and workflow execution by combining robotic process automation with AI capabilities." This solution enables organizations to "streamline routine tasks like invoice processing, order management, and data validation," reducing manual effort and improving efficiency. For example, SAP Intelligent RPA can "extract data from invoices and update financial systems automatically," as seen in SAP S /4HANA integrations.
The incorrect options are not focused on routine task automation. SAP Conversational AI handles natural language interactions, such as chatbots, not routine tasks. SAP AI Core is an infrastructure platform for AI model development, not task automation. SAP S/4HANA Cloud is a broad ERP system, not a specific automation component. SAP Intelligent RPA's role in automation, as evidenced by its use in SAP Business Technology Platform, confirms its suitability.
