Exam 156-836 Objectives, Test 156-836 Guide

TestPassKing is a very good website to provide a convenient service for the CheckPoint certification 156-836 exam. TestPassKing's products can help people whose IT knowledge is not comprehensive pass the difficulty CheckPoint certification 156-836 exam. If you add the CheckPoint Certification 156-836 Exam product of TestPassKing to your cart, you will save a lot of time and effort. TestPassKing's product is developed by TestPassKing's experts' study of CheckPoint certification 156-836 exam, and it is a high quality product.

CheckPoint 156-836: Check Point Certified Maestro Expert - R81 (CCME) exam is one of the most sought-after certification exams in the field of cybersecurity. Check Point Certified Maestro Expert - R81 (CCME) certification is designed for professionals who possess advanced knowledge and skills in designing, deploying, and managing Check Point Maestro solutions. 156-836 exam validates the candidate's ability to manage large-scale, complex networks using Maestro technologies.

To earn the CCME certification, candidates must pass the Check Point Certified Maestro Expert - R81 (CCME) exam. 156-836 Exam consists of 90 multiple-choice questions and has a time limit of 120 minutes. The passing score for the exam is 70%, and candidates who successfully pass the exam will be awarded the CCME certification.

CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q89-Q94):

NEW QUESTION # 89
There are two 10Gbps dual-port NICs and one 40Gbps NIC installed on a 23800 Appliance in slots 1, 2 and 3 accordingly. Which interfaces should be connected to Orchestrator 1 for downlinks' intra- orchestrator redundancy when using two Orchestrators?

- A. Port 1 in Slot 1 and Port 2 in Slot 1
- B. Port 1 in Slot 2 and Port 2 in Slot 1
- C. Any pair of available ports
- D. This configuration is not supported

Answer: A

Explanation:
Explanation
This configuration likely provides balanced and redundant connectivity for orchestrator redundancy.

NEW QUESTION # 90
Possibilities for a failure in a single SGM of a Security Group include.

- A. A change was made with clish instead of gClish, causing the SGM to handle traffic differently than the other SGMs.
- B. SecureXL is not enabled on the SGM.
- C. An administrator imported a hotfix into the CPUSE repository of a single SGM.
- D. There are too many active SGMs in the SG.

Answer: C

Explanation:
One of the possible causes of a failure in a single SGM of a Security Group is that an administrator imported a hotfix into the
CPUSE repository of a single SGM, instead of using the orchestrator to distribute the hotfix to all the SGMs in the Security Group.
This can create a mismatch in the software versions and configurations of the SGMs, and lead to unexpected behavior and errors.

Single Management Object (SMO)

NEW QUESTION # 91
During an upgrade, Is Multi-Version Clustering (MVC) supported?

- A. Yes, MVC is supported as of R81 for Maestro.
- B. No. Maestro does not support MVC because ClusterXL is disabled during an upgrade.
- C. Maestro supports MVC or full connectivity upgrade as of R80.40.
- D. No, Maestro does not support MVC.

Answer: C

NEW QUESTION # 92
How does HyperSync work in a Dual Site environment?

- A. Each active connection has a local backup (on the local site) and a second backup connection on each of the MHOs.
- B. Each active connection has two local backups (on the local site) and a third backup connection on the second site (remote site.)
- C. Each active connection has a backup connection on the second site (remote site.)
- D. Each active connection has a local backup (on the local site) and a second backup connection on the second site (remote site.)

Answer: D

Explanation:
HyperSync is a feature of Maestro that enables stateful synchronization of connections and resources across different sites in a Dual Site environment. HyperSync works by creating two backup connections for each active connection: one on the same site as the active connection, and another on the remote site. This ensures that the connection can be seamlessly resumed in case of a failover event, either within the same site or across the sites. HyperSync uses the Site-Sync port and VLANs to transmit the synchronization packets between the Security Group Members and the Maestro Orchestrators.

NEW QUESTION # 93
What type of license is required for an MHO?

- A. The MHO requires a VSX license.
- B. The MHO does not require a license.
- C. The MHO requires a NGTP license.
- D. A license is needed for each attached SGM.

Answer: B

Explanation:
Explanation
The MHO (Maestro Hyperscale Orchestrator) does not require a license by itself, but each SGM (Security Group Module) that is attached to the MHO needs a license. The license type depends on the features and blades that are enabled on the SGM. For example, if the SGM is running VSX, it needs a VSX license.
