## JN0-232 Valid Test Practice - JN0-232 Real Dumps

If you are ready for the exam for a long time, but lack of a set of suitable JN0-232 learning materials, I will tell you that you are so lucky to enter this page. We are such JN0-232 exam questions that you can use our products to prepare the exam and obtain your dreamed JN0-232 certificates. We all know that if you desire a better job post, you have to be equipped with appropriate professional quality and an attitude of keeping forging ahead. Our JN0-232 exam questions will be your best ally to get what you wanted.

## Juniper Security, Associate (JNCIA-SEC) Sample Questions (Q36-Q41):

### NEW QUESTION # 36

Which two statements are correct about the Junos OS architecture? (Choose two.)

- A. Restarting a single software process causes synchronization issues until other processes are restarted.
- **B. Individual software processes can be restarted without impacting the others.**
- **C. Junos is built using independent software processes.**
- D. Junos is built using a collection of interdependent software processes.

**Answer: B,C**

Explanation:

Junos OS uses a modular architecture composed of independent software processes (daemons), each handling specific functions such as routing, management, or forwarding. Because these processes operate independently, any single process can be restarted individually without affecting the operation of the others, improving stability and fault isolation.

### NEW QUESTION # 37

Click the Exhibit button.

The exhibit shows a table representing security policies from the trust zone to the untrust zone. In this scenario, which two statements are correct? (Choose two.)

- A. SSH requests from the source IP address of 172.25.11.10 are permitted to the destination IP address of 10.1.0.10.
- B. FTP requests from the source IP address of 172.25.11.11 are denied to the destination IP address of 10.1.0.10.
- C. Ping command requests from the source IP address of 172.25.11.100 are denied to the destination IP address of 10.1.0.10.
- D. FTP requests from the source IP address of 10.1.0.10 are permitted to the destination IP address of 172.25.11.100.

**Answer: A,B**

Explanation:

Juniper SRX evaluates security policies sequentially from top to bottom. Once a policy match is found, no further policies are evaluated. In this exhibit:

\* First Policy (FTP, deny):

\* Source: 172.25.11.0/24

\* Destination: 10.1.0.0/16

\* Application: FTP

\* Action: deny#Any FTP traffic from 172.25.11.0/24 to 10.1.0.0/16 is denied.

\* Second Policy (SSH, permit):

\* Same source/destination but application = SSH

\* Action = permit#SSH traffic from 172.25.11.0/24 to 10.1.0.0/16 is permitted.

\* Third Policy (HTTPS, permit)#HTTPS from the same source/destination is permitted.

\* Fourth Policy (Ping, permit):

\* Source: 172.25.11.0/24 to any destination

\* Application: ping

\* Action: permit#ICMP echo requests (ping) from 172.25.11.0/24 to any destination are permitted.

\* Fifth Policy (any # any, deny)#Serves as a default deny all at the end.

Now checking each option:

\* Option A: SSH from 172.25.11.10 # 10.1.0.10 matches the SSH permit rule (second policy).#Correct.

\* Option B: Ping from 172.25.11.100 # 10.1.0.10 matches the ping permit rule (fourth policy). This traffic is permitted, not denied.#Incorrect.

\* Option C: FTP from 10.1.0.10 # 172.25.11.100 is reverse traffic (untrust to trust). The table applies only trust # untrust, so this policy does not apply.#Incorrect.

\* Option D: FTP from 172.25.11.11 # 10.1.0.10 matches the first policy (FTP deny rule).#Correct.

Correct Statements: A, D

Reference: Juniper Networks - Security Policies Evaluation Order, Junos OS Security Fundamentals, Official Course Guide.

### NEW QUESTION # 38

You plan to use unified security policies to identify and control nested HTTP applications.

In this scenario, which two actions must you perform on your SRX Series Firewall? (Choose two.)

- A. Create all the unified security policies in the global zone.
- B. Disable the default security policy.
- C. Install the application identification (AppID) feature license on the SRX Series Firewall.
- D. Include dynamic application objects in your security policies.

**Answer: C,D**

Explanation:

The AppID license must be installed and active to enable application identification, which is required for unified security policies to recognize and control nested HTTP applications.

Dynamic application objects must be included in the unified security policies to match and control specific applications identified through AppID, such as Facebook within HTTPS traffic.

### NEW QUESTION # 39

The exhibit shows a table representing security policies from the trust zone to the untrust zone. In this scenario, which two statements are correct? (Choose two.)

- A. FTP requests from the source IP address of 10.1.0.10 are permitted to the destination IP address of 172.25.11.100.
- B. FTP requests from the source IP address of 172.25.11.11 are denied to the destination IP address of 10.1.0.10.
- C. SSH requests from the source IP address of 172.25.11.10 are permitted to the destination IP address of 10.1.0.10.
- D. Ping command requests from the source IP address of 172.25.11.100 are denied to the destination IP address of 10.1.0.10.

**Answer: B,C**

Explanation:

FTP traffic from 172.25.11.0/24 to 10.1.0.0/16 matches the explicit FTP deny rule, so a session from 172.25.11.11 to 10.1.0.10 is denied.

SSH traffic from 172.25.11.0/24 to 10.1.0.0/16 matches the explicit SSH permit rule, so a session from 172.25.11.10 to 10.1.0.10 is permitted.

### NEW QUESTION # 40

Which statement is correct about exception traffic?

- A. Exception traffic is only handled on the Packet Forwarding Engine.
- B. Exception traffic is anything that is rejected by security policies and requires additional processing.
- C. Exception traffic refers to malformed IP packets received on the Packet Forwarding Engine.
- D. Exception traffic is rate-limited on the connection between the Packet Forwarding Engine and the Routing Engine.

**Answer: D**

Explanation:

Exception traffic refers to packets that require special handling by the Routing Engine (RE) rather than being processed normally by the Packet Forwarding Engine (PFE). To protect the RE from overload, this traffic is rate-limited on the internal connection between the PFE and RE.

### NEW QUESTION # 41

.....

The Prep4cram JN0-232 exam software is loaded with tons of useful features that help in preparing for the exam efficiently. The JN0-232 questions desktop JN0-232 exam software has an easy-to-use interface. Prep4cram provides Juniper certification exam questions for desktop computers. Before purchasing, you may try a free demo to see how it gives multiple Juniper JN0-232 Questions for Juniper certification preparation. You may schedule the Juniper JN0-232 questions in the JN0-232 exam software at your leisure and keep track of your progress each time you try the Juniper JN0-232 questions, which preserves your score. However, it is only compatible with Windows.
