when you buy our LEED-Green-Associate simulating exam, our website will use professional technology to encrypt the privacy of every user to prevent hackers from stealing. We believe that business can last only if we fully consider it for our customers, so we will never do anything that will damage our reputation. Hope you can give our LEED-Green-Associate Exam Questions full trust, we will not disappoint you. And with our LEED-Green-Associate study materials, you are bound to pass the exam.

USGBC LEED Green Associate Exam Sample Questions (Q127-Q132):

NEW QUESTION # 127

The purpose of a life-cycle assessment in LEED is to evaluate the potential:

- A. Environmental impacts of a building through its life-cycle
- B. Human impacts of a material through its life-cycle
- C. Cost impacts of a building through its life-cycle
- D. Safety impacts of a material through its life-cycle

Answer: A

Explanation:

LEED defines Life Cycle Assessment (LCA) as:

"Life Cycle Assessment (LCA) analyzes the environmental impacts of a service, material or product through its entire life cycle." This makes LCA distinct from Life Cycle Costing (LCC), which evaluates economic impact.

NEW QUESTION # 128

Which of the following strategies help improve daylighting in an office building?

- A. Provide individual occupant task lighting
- B. Locate private offices toward the building core and organize cubicles at the perimeter
- C. Locate private offices toward the building perimeter and organize cubicles toward the building core
- D. Work with the project glazing contractor to specify low argon windows

Answer: B

Explanation:

Daylighting is a strategy that uses natural light to illuminate the interior spaces of a building, reducing the need for artificial lighting and improving the visual comfort and well-being of the occupants. One of the strategies that can help improve daylighting in an office building is to locate private offices toward the building core and organize cubicles at the perimeter, so that more people can benefit from the access to windows and views. This can also increase the daylight penetration depth and reduce glare and contrast¹².

NEW QUESTION # 129

A new project is being built adjacent to a park with a 1/8 mi. (0.20 km) trail leading to an urban business district, which includes several retail shops and restaurants. This project qualifies for Location and Transportation Credits by

- A. maintaining open space
- B. encouraging physical activity
- C. providing pedestrian access
- D. reducing heat island effect

Answer: C

Explanation:

The Location and Transportation (LT) category addresses the location and accessibility of a project site, as well as its impacts on transportation, land use, and community connectivity. One of the credits in this category is LT Credit: Surrounding Density and Diverse Uses, which rewards projects that are located in areas with high density and a variety of land uses, such as retail, residential, and civic facilities. This can reduce vehicle miles traveled, greenhouse gas emissions, and infrastructure costs, as well as promote

walkability, livability, and social interaction. A new project that is built adjacent to a park with a trail leading to an urban business district qualifies for this credit by providing pedestrian access to diverse uses within a 1/2 mi. (0.80 km) walking distance .

NEW QUESTION # 130

What do team members enhance by collaboration during the integrative process?

- A. Construction costs
- B. Life-cycle costs
- C. Project duration
- D. Efficiency and effectiveness of systems

Answer: D

Explanation:

The integrative process involves collaboration among all project team members, from initial planning through design and construction, to enhance the efficiency and effectiveness of systems. This process allows for better coordination among disciplines, leading to more efficient use of resources, improved environmental performance, reduced project costs, and enhanced occupant satisfaction.

NEW QUESTION # 131

Which of the following interior items contributes to a comfortable acoustic environment?

- A. Glass cubicle partitions
- B. Hollow metal doors
- C. Soft surfaces
- D. Wood cabinets

Answer: C

Explanation:

Soft surfaces contribute to a comfortable acoustic environment by absorbing sound waves and reducing noise levels. This can include items such as carpets, upholstered furniture, and acoustic ceiling tiles. In contrast, hard surfaces (like wood cabinets, hollow metal doors, or glass partitions) can reflect sound waves and increase noise levels.
