Quiz Amazon - Valid Exam AWS-Certified-Developer-Associate Details

Are you still hesitating about how to choose excellent AWS-Certified-Developer-Associate exam simulations? Our company Itcerttest is engaged in studying valid exam simulation files with high passing rate many years. If you want to find valid AWS-Certified-Developer-Associate exam simulations, our products are helpful for you. Stop hesitating, good choice will avoid making detours in the preparing for the real test. Our AWS-Certified-Developer-Associate Exam Simulations will assist you clear exams and apply for international companies or better jobs with better benefits in the near future. Go and come to us!

The Amazon AWS-Certified-Developer-Associate Exam consists of 65 multiple-choice and multiple-response questions, which must be completed within 130 minutes. The questions are designed to test the candidate's knowledge of AWS services, programming languages, and best practices for developing applications on AWS.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q135-Q140):

NEW QUESTION # 135

Given the source code for an AWS Lambda function in the local store.py containing a handler function called get_store and the following AWS CloudFormation template:

```
Transform: AWS::Serverless-2016-10-31
Resources:
    StoreFunc:
        Type: AWS::Serverless::Function
        Properties:
            Handler: store.get_store
            Runtime: python3.6
```

What should be done to prepare the template so that it can be deployed using the AWS CLI command aws ? cloudformation deploy

- A. Use aws cloudformation compile to base64 encode and embed the source file into a modified CloudFormation template.
- B. Use aws cloudformation package to upload the source code to an Amazon S3 bucket and produce a modified CloudFormation template.
- C. Use aws lambda zip to package the source file together with the CloudFormation template and deploy the resulting zip archive.
- D. Use aws serverless create-package to embed the source file directly into the existing CloudFormation template.

Answer: D

NEW QUESTION # 136

A company is building a scalable data management solution by using AWS services to improve the speed and agility of development.
The solution will ingest large volumes of data from various sources and will process this data through multiple business rules and transformations.
The solution requires business rules to run in sequence and to handle reprocessing of data if errors occur when the business rules run.
The company needs the solution to be scalable and to require the least possible maintenance.
Which AWS service should the company use to manage and automate the orchestration of the data flows to meet these requirements?

- A. AWS Glue
- B. AWS Step Functions
- C. AWS Lambda
- D. AWS Batch

Answer: C

NEW QUESTION # 137

A developer is building a serverless application hosted on AWS that uses Amazon Redshift as a data store.
The application has separate module for read/write and read-only functionality. The modules need their own database users for compliance reasons.
Which combination of steps should a security engineer implement to grant appropriate access? (Choose two.)

- A. Configure cluster security groups for each application module to control access to database users that are required for read-only and read-write.
- B. Create local database users for each module.
- C. Configure an IAM policy for each module. Specify the ARN of an IAM user that allows the GetClusterCredentials API

call.
- D. Configure an IAM policy for each module. Specify the ARN of an Amazon Redshift database user that allows the GetClusterCredentials API call.
- E. Configure a VPC endpoint for Amazon Redshift. Configure an endpoint policy that maps database users to each application module, and allow access to the tables that are required for read-only and read/write.

Answer: A,B

NEW QUESTION # 138
A nightly batch job loads 1 million new records into a DynamoDB table. The records are only needed for one hour, and the table needs to be empty by the next night's batch job.
Which is the MOST efficient and cost-effective method to provide an empty table?

- A. Use DeleteItemusing a ConditionExpression.
- B. Write a recursive function that scans and calls out DeleteItem.
- C. Use BatchWriteItemto empty all of the rows.
- D. Create and then delete the table after the task has completed.

Answer: A

NEW QUESTION # 139
A Developer has implemented a Lambda function that needs to add new customers to an RDS database that is expected to run hundreds of times per hour. The Lambda function is configured to use 512MB of RAM and is based on the following pseudo code:

```
def lambda_handler(event, context):

db = database.connect()

db.statement('INSERT INTO Customers (CustomerName) VALUES
(context.name)')

db.close()
```

After testing the Lambda function, the Developer notices that the Lambda execution time is much longer than expected. What should the Developer do to improve performance?

- A. Replace RDS wit Amazon DynamoDB to implement control over the number of writes per second.
- B. Move the database connection and close statement out of the handler. Place the connection in the global space.
- C. Increase the size of the RDS database to allow for an increased number of database connections each hour.
- D. Increase the amount of RAM allocated to the Lambda function, which will increase the number of threads the Lambda can use.

Answer: B

Explanation:
Explanation
Refer AWS documentation - Lambda Best Practices
Take advantage of Execution Context reuse to improve the performance of your function. Make sure any externalized configuration or dependencies that your code retrieves are stored and referenced locally after initial execution. Limit the re-initialization of variables/objects on every invocation. Instead use static initialization/constructor, global/static variables and singletons. Keep alive and reuse connections (HTTP, database, etc.) that were established during a previous invocation.
