EMC Dell Midrange Storage Solutions Design 2023 Sample Questions (Q48-Q53):

NEW QUESTION # 48

Which parameters can be selected when sizing a Dell Unity XT 480F using the System Design method?

- A. Drive count and RAID level Percentage of random writes and reads
- B. One of four workload types Drive count and RAID level
- C. Data reduction ratio Percentage of sequential writes and reads
- D. One of two block sizes Application type

Answer: B

Explanation:
When sizing a Dell Unity XT 480F using the System Design method, you can select one of four workload types and Drive count and RAID level. This workload type selection will take into account the specific IOPS and capacity requirements of the environment. The drive count and RAID level will determine the overall capacity and level of data protection required.

NEW QUESTION # 49

What does the Storage Performance Saturation field show in the Configurations tab of the PowerStore sizing tool in a Multi-Appliance solution?

- A. Maximum Performance
- B. Aggregate of all capacity
- C. Maximum usable capacity
- D. Aggregate of all workloads

Answer: D

- A. 1 minute
- B. 60 minutes
- C. 5 minutes
- D. 20 minutes

Answer: C

Explanation:
Recovery Point ObjectiveWhen you set up an asynchronous replication session, you can configureautomatic synchronization based on the RPO. You can specify an RPO from a minimum of 5 minutes up to a maximum of 1440 minutes (24 htours).

NEW QUESTION # 52

The CPU utilization in a Dell Unity XT system is currently at 68%. What is the level of CPU utilization?

- A. Normal Utilization
- B. Low Utilization
- C. High Utilization
- D. Extremely High Utilization

Answer: A

Explanation:
The Dell Unity XT storage systems have defined thresholds for various resource utilizations, including CPU utilization. According to the Dell Unity XT Best Practices and Performance Guidelines (DELL UNITY:
BEST PRACTICES GUIDE, Dell Technologies, Dell Unity OE version 5.x), the typical CPU utilization levels are classified as follows:
Normal Utilization:CPU usage under typical operating conditions generally ranges from 40% to 70%. This is considered optimal and normal for Unity XT systems.
High Utilization:CPU usage between 70% and 85% is considered high but generally still within operational norms.
Extremely High Utilization:Above 85% utilization may lead to performance impacts and should be investigated.
Low Utilization:Utilization below 40% may indicate under-utilization of resources or low system activity.
Since the CPU utilization in this case is68%, it falls in the range of normal utilization. It suggests that the system is performing well and efficiently handling the workload without strain.
This categorization ensures that administrators can quickly assess system health and identify potential bottlenecks or underutilization issues. The Dell Unity XT storage system's management interface and performance monitoring tools (like Unisphere or CloudIQ) also align with these utilization thresholds.
