## Free PDF Quiz 2026 Snowflake First-grade ADA-C01: New SnowPro Advanced Administrator Test Notes

If you don't want to waste much time on preparing for your exam, Snowflake ADA-C01 exam braindumps files will be a shortcut for you. Good exam materials make you twice the result with half the effort. Our Snowflake ADA-C01 exam braindumps cover

many questions and answers of the real test so that you can be familiar with the real test question. When you attend Snowflake ADA-C01 Exam, it is easy for you to keep good mood and control your finishing time.

# Snowflake SnowPro Advanced Administrator Sample Questions (Q51-Q56):

## NEW QUESTION # 51
What SCIM integration types are supported in Snowflake? (Select THREE).

- A. Duo Security Provisioning Connector
- B. Amazon Web Services (AWS)
- C. Okta
- D. Google Cloud Platform (GCP)
- E. Custom
- F. Azure Active Directory (Azure AD)

**Answer: C,E,F**

Explanation:
Explanation
According to the Snowflake documentation1, Snowflake supports SCIM 2.0 to integrate Snowflake with Okta and Microsoft Azure AD, which both function as identity providers. Snowflake also supports identity providers that are neither Okta nor Microsoft Azure (i.e. Custom). Therefore, the SCIM integration types that are supported in Snowflake are Okta, Custom, and Azure AD. Option A is incorrect because Amazon Web Services (AWS) is not a SCIM identity provider. Option B is incorrect because Google Cloud Platform (GCP) is not a SCIM identity provider. Option F is incorrect because Duo Security Provisioning Connector is not a SCIM identity provider.

## NEW QUESTION # 52
What access control policy will be put into place when future grants are assigned to both database and schema objects?

- A. An access policy combining both the database object and the schema object will be used, with the most permissive policy taking precedence.
- B. Database privileges will take precedence over schema privileges.
- C. Schema privileges will take precedence over database privileges.
- D. An access policy combining both the database object and the schema object will be used, with the most restrictive policy taking precedence.

**Answer: C**

Explanation:
Explanation
When future grants are defined on the same object type for a database and a schema in the same database, the schema-level grants take precedence over the database level grants, and the database level grants are ignored4.
This behavior applies to privileges on future objects granted to one role or different roles4. Future grants allow defining an initial set of privileges to grant on new (i.e. future) objects of a certain type in a database or a schema3. As soon as the new objects are created inside the database or schema, the predefined set of privileges are assigned to the object automatically without any manual intervention3.

## NEW QUESTION # 53
Which type of listing in the Snowflake Marketplace can be added and queried immediately?

- A. Standard listing
- B. Personalized listing
- C. Regional listing
- D. Monetized listing

**Answer: A**

Explanation:
Explanation

According to the Snowflake documentation1, a standard listing is a type of listing that provides free access to the full data product, with no payment required. A standard listing can be added and queried immediately by the consumer, as long as they accept the terms and conditions of the listing. A monetized listing is a type of listing that charges for access to the data product, using the pricing models offered by Snowflake. A monetized listing requires the consumer to provide payment information and agree to the billing terms before accessing the data product. A regional listing is not a type of listing, but a way to specify the regions where the listing is available. A personalized listing is a type of listing that provides limited trial access to the data product, with unlimited access to the full data product available upon request. A personalized listing requires the consumer to request access from the provider and wait for the provider to grant access before accessing the data product.

Therefore, the only type of listing that can be added and queried immediately is the standard listing.

## NEW QUESTION # 54

Review the output of the SHOW statement below which displays the current grants on the table DB1. S1. T1:

This statement is executed:
USE ROLE ACCOUNTADMIN;
DROP ROLE A;
What will occur?

- A. The table object DB1. S1. T1 will be dropped.
- B. The SELECT privilege on table DB1. S1. T1 to role B will be shown as GRANTED_BY the role ACCOUNTADMIN.
- C. The OWNERSHIP privilege on table DB1. S1. T1 will be transferred to the ACCOUNTADMIN role.
- D. The SELECT privileges for roles B and C will remain.

**Answer: D**

Explanation:
Explanation
Dropping role A does not affect the SELECT privileges granted to roles B and C on the table DB1.S1.T1.
According to the Snowflake documentation, dropping a role revokes all privileges granted to the role, but does not revoke any privileges granted by the role. Therefore, the OWNERSHIP privilege on the table DB1.S1.T1 will be revoked from role A, but the SELECT privileges granted by role A to role B and by role B to role C will remain. The GRANTED_BY column will still show the original grantor of the privilege, not the ACCOUNTADMIN role.

## NEW QUESTION # 55

A Snowflake Administrator wants to create a virtual warehouse that supports several dashboards, issuing various queries on the same database.
For this warehouse, why should the Administrator consider setting AUTO_SUSPEND to 0 or NULL?

- A. To save costs on warehouse shutdowns and startups for different queries
- B. To keep the data cache warm to support good performance of similar queries
- C. To save costs by running the warehouse as little as possible
- D. To keep the query result cache warm for good performance on repeated queries

**Answer: B**

Explanation:
Explanation
According to the Snowflake documentation1, the AUTO_SUSPEND property specifies the number of seconds of inactivity after which a warehouse is automatically suspended. If the property is set to 0 or NULL, the warehouse never suspends automatically.
For a warehouse that supports several dashboards, issuing various queries on the same database, setting AUTO_SUSPEND to 0 or

NULL can help to keep the data cache warm, which means that the data used by the queries is already loaded into the warehouse memory and does not need to be fetched from the storage layer. This can improve the performance of similar queries that access the same data. Option A is incorrect because setting AUTO_SUSPEND to 0 or NULL does not save costs on warehouse shutdowns and startups, but rather increases the costs by keeping the warehouse running continuously. Option B is incorrect because setting AUTO_SUSPEND to 0 or NULL does not run the warehouse as little as possible, but rather runs the warehouse as much as possible. Option D is incorrect because setting AUTO_SUSPEND to 0 or NULL does not affect the query result cache, which is a separate cache that stores the results of previous queries for a period of time. The query result cache is not dependent on the warehouse state, but on the query criteria2.

**NEW QUESTION # 56**

......

TorrentVCE ADA-C01 exam preparation begins and ends with your accomplishing this credential goal. Although you will take each ADA-C01 online test one at a time - each one builds upon the previous. Remember that each ADA-C01 Exam Preparation is built from a common certification foundation.ADA-C01 prepareation will provide the most excellent and simple method to pass your ADA-C01 Certification Exams on the first attempt.
