A support team is also available 24/7 to answer any queries related to the Adobe AD0-E117 exam dumps.

Adobe Experience Manager Architect Master Sample Questions (Q73-Q78):

NEW QUESTION # 73

A news agency editor wants to publish news articles to an intermediate Publish (preview) instance for internal review before publishing the article to production Publish instance.

Which two steps should the Architect recommend? (Choose two.)

- A. Create a custom publish workflow
- B. Create a separate live copy to preview content
- C. Create a closed user group (CUG) for editors
- D. Set up a new replication agent for preview server
- E. Create a reverse replication agent on preview server

Answer: B,D

Explanation:

Create a separate live copy to preview content and set up a new replication agent for preview server1. According to Adobe Experience Manager documentation⁴, a live copy is used to create a local copy of content from another site that can be modified independently. A replication agent is used to publish content from an author instance to a publish instance. Creating a reverse replication agent on preview server (B) is not necessary as reverse replication is not supported by AEM as a Cloud Service¹. Creating a custom publish workflow (E) is also not necessary as workflows are handled by AEM Cloud Service automatically¹.

NEW QUESTION # 74

An AEMaaCS customer wants to have a sub section in site to accept data from an end user, which may be text as well as documents. The site is expected to have high data input which would need moderation and masking before making it live for public access. Due to a legal content policy, the data collected through the site cannot be shared outside the organization. What would an architect recommend?

- A. Utilize AEM communities with MSRP topology
- B. Utilize backward Sling Content Distribution from publish server
- C. Utilize Reverse Replication through publish servers
- D. Utilize data storage/APIs outside of AEMaaCS

Answer: D

NEW QUESTION # 75

A client wants to change how they publish their content. Refer to the following client business requirements:

- * The client has a seasonal business that has significant content changes across their site that need to be rolled out at once based on the season change over date.
 - * The content authors need to be able to work one season in advance of publish dates to ensure that all changes can be completed on time.
 - * The content authors need a way to indicate that all the seasonal changes are ready. If the content changes are not completed, then the pages should not get published.
 - * The content authors need the ability to modify the current live pages without rolling back changes for a future content rollout.
- What approach should the Architect recommend?

- A. Use the Manage Publication with scheduling value set to the season change over date when changes are completed.
- B. Use the Versioning feature when editing a page to toggle and publish changes when ready.
- C. Create a Project inside of AEM for each new season and create a task for notifying that changes are completed.
- D. Use Launches inside of AEM for each new season and use the production ready flag to show changes are completed.

Answer: A

NEW QUESTION # 76

An AEMaaCS customer processes thousands of assets on a daily basis. A major business requirement is to push assets being published to various legacy external systems based on tagged asset metadata. Which solution would an architect choose?

- A. Use a daily scheduler to distribute assets conditionally on top-up basis during least traffic hours
- B. Use custom workflow process to push assets conditionally via activation workflow for near real time transfer
- C. Use headless application on App Builder to extend asset export using Event and Runtime
- D. Use an external application server to offload AEM load and run batch processing using Assets HTTP API

Answer: B

NEW QUESTION # 77

Refer to the exhibit.

A customer has SSO on its AEM Author environment using Adobe IMS, which is integrated with the customer's IDP using SAML. The customer plans to roll out a new secured website on AEM where SSO authentication is required for end users. The end user accounts are also managed in the customer's existing IDP. How should the Architect set up the authentication for the website?

- A. Integrate AEM Publisher using oAuth with Adobe IMS
- B. Integrate AEM Publisher using SAML directly with the IDP
- **C. Integrate AEM Publisher using SAML with Adobe IMS**
- D. Set up CUG and use User Synchronisation from Author to Publisher

Answer: C

NEW QUESTION # 78

.....
