

Analytics-Admn-201 Fragen Beantworten, Analytics-Admn-201 Quizfragen Und Antworten

Übrigens, Sie können die vollständige Version der EchteFrage Analytics-Admn-201 Prüfungsfragen aus dem Cloud-Speicher herunterladen: <https://drive.google.com/open?id=12V4qcFJoHynAZXGS4nAJ8UIBdwkVHkA>

Wir bemühen uns nun darum, den Kandidaten rechtzeitigen und effizienten Service zu bieten, um Ihre wertvolle Zeit zu ersparen. EchteFrage bietet Ihnen zahlreiche Lerntipps, Fragen und Antworten zur Salesforce Analytics-Admn-201 Zertifizierungsprüfung. Einige Websites bieten Ihnen auch Lernmaterialien zur Analytics-Admn-201 Zertifizierungsprüfung, die von guter Qualität ist und mit dem Zeit Schritt halten. Aber EchteFrage ist die einzige Website, die beste Schulungsunterlagen zur Analytics-Admn-201 Zertifizierungsprüfung bietet. Mit Hilfe der Lernmaterialien und der Anleitung von EchteFrage können Sie die Salesforce Analytics-Admn-201 Zertifizierungsprüfung einmalig bestehen.

Leute aus verschiedenen Bereichen bemühen sich um ihre Zukunft. Bemühen Sie sich auch um Erhöhung Ihrer Fähigkeit? Haben Sie das Salesforce Analytics-Admn-201 Zertifikat? Wie viel wissen Sie über Salesforce Analytics-Admn-201 Zertifizierungsprüfung? Was sollen Sie machen, wenn Sie nicht genug Kenntnisse zur Analytics-Admn-201 Prüfung beherrschen? Machen Sie sich keine Sorge. EchteFrage kann Ihnen Hilfe bieten.

Analytics-Admn-201 Quizfragen Und Antworten & Analytics-Admn-201 Vorbereitungsfragen

Warum versprechen wir, dass wir Ihnen Geld zurückgeben, wenn Sie die Salesforce Analytics-Admn-201 Prüfung nicht bestehen? Denn zahllose Kunden, die unsere Prüfungssoftware benutzt haben, bestehen die Salesforce Analytics-Admn-201 Zertifizierungsprüfung, was uns die Konfidenz bringt. Salesforce Analytics-Admn-201 Prüfung ist eine sehr wichtige Beweis der IT-Fähigkeit für die Angestellte im IT-Gewerbe. Aber die Prüfung ist auch schwierig. Die Arbeiter von EchteFrage haben die Salesforce Analytics-Admn-201 Prüfungsunterlagen mit große Einsätze geforscht. Die Software ist das Geistesprodukt vieler IT-Spezialist.

Salesforce Analytics-Admn-201 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.

Thema 2	Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.
Thema 3	Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.
Thema 4	Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.
Thema 5	Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.

Salesforce Certified Tableau Server Administrator Analytics-Admn-201 Prüfungsfragen mit Lösungen (Q44-Q49):

44. Frage

What account should you use to run the Tableau Server installation program?

- A. An NT AUTHORITY\NetworkService account
- B. A domain user account
- C. A local user account
- D. An account in the local administrator group

Antwort: D

Begründung:

Installing Tableau Server on Windows requires an account with sufficient privileges to configure services, write to the file system, and manage registry settings. Let's analyze this in depth:

* Installation Requirements:

* The installer creates services (e.g., Tableau Server Gateway), writes to Program Files and ProgramData, and configures TSM.

* It needs local administrative privileges on the machine to perform these tasks.

* Post-install, a "Run As" account can be set for services (e.g., NT AUTHORITY\NetworkService), but this is separate from the install account.

* Option C (An account in the local administrator group): Correct.

* Why: The account must be in the local Administrators group to:

* Install software (UAC elevation).

* Configure services and ports.

* Write to protected directories (e.g., C:\Program Files\Tableau).

* Examples: A local admin (e.g., Administrator) or a domain user added to the Administrators group (e.g., DOMAIN\AdminUser).

* Process: Log in as this account, run the installer, and provide TSM admin credentials during setup.

* Option A (A local user account): Incorrect.

* A standard local user (not in Administrators) lacks permissions-installation would fail with

"Access Denied" errors.

* Option B (A domain user account): Incorrect unless clarified.

* A domain user without local admin rights can't install. If it's in the Administrators group, it qualifies, but C is more specific.

* Option D (NT AUTHORITY\NetworkService): Incorrect.

* This is a built-in service account for running services (default "Run As" post-install), not for executing the installer-an interactive user account is required.

Why This Matters: Using the right account prevents install failures and ensures secure configuration- critical for production setups.

Reference: Tableau Server Documentation - "Install and Configure Tableau Server" (https://help.tableau.com/current/server/en-us/install_config.htm).

45. Frage

What Tableau Server authentication method should you configure to use OpenID Connect?

- **A. SAML**
- B. Local Authentication
- C. Active Directory
- D. Kerberos

Antwort: A

Begründung:

Tableau Server supports multiple authentication methods, including Local Authentication, Active Directory, Kerberos, SAML, and OpenID Connect. OpenID Connect (OIDC) is an identity layer built on OAuth 2.0, commonly used for single sign-on (SSO). In Tableau Server, OIDC is implemented as a variant of SAML (Security Assertion Markup Language) authentication because both are SSO protocols managed through the same configuration workflow.

To use OpenID Connect:

* Configure Tableau Server for SAML/SSO.

* Provide an OIDC-compatible identity provider (IdP) configuration (e.g., Google, Okta).

* Set up the IdP metadata and certificates in TSM.

* Option D (SAML): Correct. Tableau Server treats OIDC as a subset of its SAML authentication framework, so you configure it under the SAML settings in TSM.

* Option A (Local Authentication): Incorrect. Local Authentication uses Tableau's internal user database, not an external SSO protocol like OIDC.

* Option B (Kerberos): Incorrect. Kerberos is a network authentication protocol for Windows environments, unrelated to OIDC.

* Option C (Active Directory): Incorrect. AD uses LDAP or Kerberos, not OIDC, for authentication.

Reference: Tableau Server Documentation - "Configure SAML and OpenID Connect" (https://help.tableau.com/current/server/en-us/saml_config.htm).

46. Frage

What statement correctly describes locking permissions to a project?

- A. You can lock permissions to a project by setting the appropriate Project permission role
- **B. You can lock permissions to a project by changing Customizable to Locked**
- C. Locking permissions to projects must be enabled on the Tableau Server Settings page
- D. Content permissions are locked to a project by default

Antwort: B

Begründung:

In Tableau Server, projects organize content (workbooks, data sources) and use permissions to control access. "Locking permissions" restricts how permissions are managed within a project-let's explore this exhaustively:

* Permission Management Modes:

* Managed by Owner: Default mode. Content owners (e.g., workbook publishers) can set permissions on their items, inheriting project defaults as a starting point.

* Locked to the Project: Project-level permissions are enforced, and content owners cannot modify them. This ensures consistency across all items in the project.

* How to Lock:

* In the Tableau Server web UI:

* Go to Content > Projects.

- * Select a project, click Actions > Permissions.
- * In the Permissions dialog, change Permissions Management from "Customizable" (Managed by Owner) to "Locked."
- * Set the desired permissions (e.g., Viewer, Editor) for users/groups, which then apply uniformly to all content.
- * Via REST API: Use the updateProject endpoint with "permissionsLocked": true.
- * Option B (You can lock permissions to a project by changing Customizable to Locked): Correct.
- * Details: This is the precise action in the UI-switching from "Customizable" to "Locked" locks permissions at the project level.
- * Impact: Owners lose the ability to override permissions on individual workbooks/data sources, enforcing governance.
- * Example: Set "All Users" to Viewer (Locked)-all content in the project is view-only, regardless of owner intent.
- * Option A (Locking permissions must be enabled on the Server Settings page): Incorrect.
- * Why: Locking is a per-project setting, not a server-wide toggle. The Server Settings page (via TSM) controls global configs (e.g., authentication), not project permissions.
- * Option C (Content permissions are locked by default): Incorrect.
- * Default: New projects are "Managed by Owner" (Customizable), allowing flexibility unless explicitly locked by an admin.
- * Option D (By setting the appropriate Project permission role): Incorrect.
- * Confusion: "Project permission role" isn't a term-permissions are set via rules (e.g., Viewer, Editor), but locking is a separate action (Customizable # Locked).

Why This Matters: Locking permissions ensures uniform access control, critical for regulated environments or large teams where consistency trumps flexibility.

Reference: Tableau Server Documentation - "Lock Project Permissions" (https://help.tableau.com/current/server/en-us/permissions_lock.htm).

47. Frage

You install Tableau Server on a server that has four processor cores. How many instances of each Tableau Server process are installed?

- A. 0
- **B. 1**
- C. 2
- D. 3

Antwort: B

Begründung:

Tableau Server's installer configures process instances based on hardware and deployment type (single-node vs. multi-node). For a single-node installation with 4 cores, we need to consider the default process topology

. Let's break this down exhaustively:

* Key Processes:

- * Gateway: Handles incoming requests (1 instance).
 - * Application Server (VizPortal): Manages UI and sessions (1 instance).
 - * VizQL Server: Renders visualizations (2 instances).
 - * Backgrounder: Runs extract refreshes, subscriptions (1 instance).
 - * Data Server: Manages data connections (1 instance).
 - * File Store: Stores extracts (1 instance).
 - * Repository: Metadata database (1 instance, active).
 - * Cluster Controller, Cache Server, etc.: Supporting processes (typically 1 each).
- * Default Configuration:

- * On a single-node install, Tableau sets 1 instance per process unless specified otherwise, except for VizQL, which defaults to 2.
 - * The installer doesn't scale instances linearly with cores (e.g., 4 cores # 4 instances). Post-install, TSM can adjust this (e.g., tsm topology set-process), but the question asks for the installed default.
 - * Minimum hardware (8 cores, 32 GB RAM) suggests higher defaults, but 4 cores still triggers a minimal setup.
 - * Option B (1): Correct with Caveat.
 - * Most processes (e.g., Backgrounder, Gateway, Data Server) default to 1 instance on install, regardless of 4 cores.
 - * VizQL defaults to 2, but the question's phrasing ("each process") implies a general rule.
- Historically (and per docs), 1 is the baseline for most, with VizQL as the exception.
- * Interpretation: Assuming "each" means the typical case, 1 fits most processes on a 4-core single- node setup.
 - * Option A (2): Incorrect. Only VizQL defaults to 2; others don't.
 - * Option C (8): Incorrect. Far exceeds defaults-8 cores might justify more, but not 4.
 - * Option D (4): Incorrect. Not tied to core count by default; manual config would be needed.

Why This Matters: Understanding defaults aids capacity planning-4 cores is below production minimum (8), so performance tuning may be needed post-install.

Reference: Tableau Server Documentation - "Server Process Settings" (<https://help.tableau.com/current/server/en-us/processes.htm>).

48. Frage

Which three data sources support Kerberos delegation with Tableau Server? (Choose three.)

- A. SAP HANA
- B. SQL Server
- C. Teradata
- D. PostgreSQL

Antwort: A,B,C

Begründung:

Kerberos delegation allows Tableau Server to pass a user's Kerberos credentials to a data source for seamless authentication (SSO)-let's explore which sources support it:

* Kerberos Overview:

* Used with Active Directory (AD) for SSO in Windows environments.

* Tableau Server delegates the user's ticket to the data source, avoiding embedded credentials.

* Requires:

* Data source support for Kerberos.

* Proper configuration (e.g., SPN, constrained delegation).

* Supported Data Sources: Per Tableau's documentation:

* Option A (Teradata): Correct.

* Details: Supports Kerberos delegation-common in enterprise data warehouses.

* Config: Enable in TSM (tsm authentication kerberos configure) and set SPN for Teradata.

* Option C (SQL Server): Correct.

* Details: Fully supports Kerberos-widely used with AD-integrated SQL Server instances.

* Config: Requires AD setup and "Trustworthy" delegation in SQL Server.

* Option D (SAP HANA): Correct.

* Details: Supports Kerberos SSO via delegation-popular in SAP ecosystems.

* Config: Needs HANA Kerberos setup (e.g., keytab) and Tableau Server integration.

* Option B (PostgreSQL): Incorrect.

* Why: Supports Kerberos authentication natively, but Tableau Server doesn't enable delegation to PostgreSQL-users must embed credentials or use other methods (e.g., OAuth).

Why This Matters: Kerberos delegation enhances security by avoiding stored passwords-knowing supported sources ensures SSO feasibility.

Reference: Tableau Server Documentation - "Kerberos Delegation" (https://help.tableau.com/current/server/en-us/kerberos_delegation.htm), "Supported Connectors" (<https://help.tableau.com/current/server/en-us/datasource.htm>).

49. Frage

.....

Wenn Sie in kurzer Zeit mit weniger Mühe sich ganz effizient auf die Salesforce Analytics-Admn-201 Zertifizierungsprüfung vorbereiten, benutzen Sie doch schnell die Schulungsunterlagen zur Salesforce Analytics-Admn-201 Zertifizierungsprüfung. Sie werden von der Praxis bewährt. Viele Kandidaten haben bewiesen, dass man mit der Hilfe von EchteFrage die Prüfung 100% bestehen können. Mit EchteFrage können Sie Ihr Ziel erreichen und die beste Effekte erzielen.
