Valid JN0-336 Test Voucher | JN0-336 Download Pdf

No matter in the day or on the night, you can consult us the relevant information about our JN0-336 preparation exam through the way of chatting online or sending emails. I'm sure our 24-hour online service will not disappoint you as we offer our service 24/7 on our JN0-336 Study Materials. And we will give you the most considerate suggestions on our JN0-336 learning guide with all our sincere and warm heart.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q77-Q82):

NEW QUESTION # 77

After JSA receives external events and flows, which two steps occur? (Choose two.)

- A. Before formatting the data, the data is analyzed for relevant information.
- B. After the information is filtered, JSA responds with active measures
- C. Before the information is filtered, the information is formatted
- D. After formatting the data, the data is stored in an asset database.

Answer: C,D

Explanation:

When JSA (Juniper Secure Analytics) receives external events and flows, the typical processing steps are:

Option C. Before the information is filtered, the information is formatted.

Data formatting is an initial step in the process where raw data from events and flows is converted into a standard format that can be more easily processed and analyzed by JSA.

Option A. After formatting the data, the data is stored in an asset database.

Once the data is formatted, it is stored in an asset database. This database acts as a repository for all the formatted data, enabling JSA to perform further analysis, correlation, and eventually, to maintain a comprehensive view of the network assets and activities.

These steps are part of JSA's comprehensive approach to security event management, which involves collecting, normalizing, and analyzing data to identify potential security threats and vulnerabilities efficiently.

NEW QUESTION # 78

Which two types of SSL proxy are available on SRX Series devices? (Choose two.)

- A. server-protection
- B. client-protection
- C. Web proxy
- D. DNS proxy

Answer: A,B

Explanation:

Based on SSL proxy is a feature that allows SRX Series devices to decrypt and inspect SSL/TLS traffic for security purposes.

According to SRX Series devices support two types of SSL proxy:

Client-protection SSL proxy also known as forward proxy - The SRX Series device resides between the internal client and outside server. It decrypts and inspects traffic from internal users to the web.

Server-protection SSL proxy also known as reverse proxy - The SRX Series device resides between outside clients and internal servers. It decrypts and inspects traffic from web users to internal servers.

NEW QUESTION # 79

You are troubleshooting unexpected issues on your JIMS server due to out of order event log timestamps.

Which action should you take to solve this issue?

- A. Enable time synchronization on the domain controllers.
- B. Enable time synchronization on the JIMS server.
- C. Enable time synchronization on the client devices.
- D. Enable time synchronization on the SRX Series devices.

Answer: A

Explanation:

To solve the issue of out of order event log timestamps on your JIMS server, you should enable time synchronization on the domain controllers. JIMS (Juniper Identity Management Service) is a Windows service that collects user, device, and group information from Active Directory domains or syslog sources and provides it to SRX Series devices and CSO for identity-based security policies. JIMS relies on the timestamps of the event logs generated by the domain controllers to track user logins, logouts, and IP address changes. If the domain controllers have different or inaccurate clocks, the event logs may have out of order or incorrect timestamps, which can cause JIMS to miss or misinterpret some events and affect its accuracy and performance. Therefore, you should ensure that all the domain controllers in your network are synchronized with a reliable time source, such as an NTP server or a Windows Time service. Reference: = Juniper Identity Management Service User Guide, Juniper Identity Management Service Feature Guide, Configure JIMS Collector to Get Microsoft Event Logs, Considerations for timestamps in centralized logging platforms

NEW QUESTION # 80

Click the Exhibit button.

Which two statements about the log output shown in the exhibit are correct? (Choose two.)

- A. AppTrack is enabled on the trust zone:
- B. Traffic destined to the HTTP server is placed in an IPsec tunnel
- C. Source NAT is performed
- D. AppTrack is enabled on the untrust zone

Answer: A,C

NEW QUESTION # 81

You want to permit access to an application but block application sub.

Which two security policy features provide this capability? (Choose two.)

- A. APPID
- B. content filtering
- C. micro application detection
- D. URL filtering

Answer: A,C

Explanation:

Micro application detection is a feature that enables more granular control over applications by identifying and taking action on sub-features or specific behaviors within an application. For example, allowing access to Facebook while blocking Facebook Chat.

Application Identification (APPID) is a feature that identifies and controls applications based on their traffic patterns and characteristics. APPID can be configured to recognize not only the main application but also its various subcomponents, allowing for precise control over what is allowed or blocked.

NEW QUESTION # 82
