These formats are SAFe-RTE PDF dumps files, desktop Fast2test SAFe-RTE practice exam software, and web-based SAFe-RTE practice test software.

Scaled Agile SAFe-RTE Exam is a critical certification for individuals and organizations looking to implement the Scaled Agile Framework. It is a comprehensive exam that covers a wide range of topics and requires individuals to have a deep understanding of the framework and the role of the RTE. By obtaining this certification, individuals can advance their careers in the agile space, while organizations can be confident that they have the necessary skills and knowledge to effectively manage their release trains.

The SAFe RTE is responsible for coordinating the activities of several Agile teams working together on a common program. The RTE ensures that the teams are working effectively and efficiently, and that they are delivering high-quality software on schedule. The RTE is also responsible for facilitating the Agile Release Train (ART) ceremonies, such as PI Planning, System Demos, and Inspect and Adapt workshops.

Scaled Agile SAFe-RTE (SAFe Release Train Engineer) Certification Exam is a widely recognized certification program that validates the knowledge and skills of Release Train Engineers under the Scaled Agile Framework (SAFe). The SAFe framework is a comprehensive approach to enterprise-level agility that helps organizations to manage complex software projects efficiently. The RTE plays a critical role in the SAFe framework, acting as a facilitator and orchestrator for the release train. The SAFe-RTE certification exam is designed to test the knowledge and skills of RTEs on various aspects of the SAFe framework, including Agile software development, Lean-Agile principles, and SAFe implementation.

Reliable SAFe-RTE Exam Answers | Amazing Pass Rate For SAFe-RTE: SAFe Release Train Engineer | High-quality SAFe-RTE Exam Overviews

Our SAFe-RTE exam cram is famous for instant access to download, and you can receive the downloading link and password within ten minutes, so that you can start your practice as early as possible. Furthermore, SAFe-RTE exam dump are high-quality, since we have experienced professionals to edit and verify them. We offer you free demo for you to have a try before buying SAFe-RTE Exam Braindumps, so that you can have a deeper understanding of what you are going to buy. You can enjoy free update for one year for SAFe-RTE exam dumps, and the update version for SAFe-RTE exam dumps will be sent to your email automatically.

Scaled Agile SAFe Release Train Engineer Sample Questions (Q118-Q123):

NEW QUESTION # 118

When is the Inspect and Adapt event held?

- A. During the Program Increment (PI)
- **B. At the end of the Program Increment (PI)**
- C. At the end of every Iteration
- D. After the System Demo

Answer: B

Explanation:

The Inspect and Adapt (I&A) event is a significant event in the SAFe framework that is held at the end of each Program Increment (PI). The purpose of this event is to demonstrate and evaluate the current state of the Solution, where teams reflect on their progress and identify improvement backlog items through a structured problem-solving workshop. This aligns with the Agile Manifesto's emphasis on continuous improvement and SAFe's Core Value of relentless improvement. The I&A event includes all ART stakeholders and results in improvement backlog items that are added to the ART Backlog for the next PI Planning event. This ensures that every Agile Release Train (ART) improves with every PI

NEW QUESTION # 119

Which core competency describes the ability to deliver continuous value?

- **A. Agile Product Delivery**
- B. Business Agility
- C. Lean Portfolio Management
- D. Organizational Agility

Answer: A

Explanation:

The core competency that describes the ability to deliver continuous value in SAFe is Agile Product Delivery. This competency is focused on developing and delivering products and services that meet customer needs and provide sustainable competitive advantage. It emphasizes the importance of a customer-centric approach, developing on cadence, releasing on demand, and building in quality from the beginning. Agile Product Delivery ensures that the right solutions are delivered at the right time, enabling a flow of value to customers with speed and efficiency.

NEW QUESTION # 120

What is ultimately intended to be supported by the use of a Program board?

- **A. Feature delivery**
- B. Program predictability
- C. Dependency review
- D. Problem solving

Answer: A

NEW QUESTION # 121

During PI Planning, the Release Train Engineer (RTE) sees the team's excitement decline as Product Management changes priorities, including the top ten Features in the ART Backlog. In addition, Product Management is asking for new estimates, timelines, and scope changes. What is the likely reason for this behavior?

- A. People are over-controlled and under-utilized
- B. Management stakeholders are not involved in changing the system
- **C. Lack of training and preparation for PI Planning**
- D. Cadence and synchronization are not in alignment

Answer: C

Explanation:

The likely reason for the decline in team excitement during PI Planning, as Product Management changes priorities and asks for new estimates, timelines, and scope changes, is a lack of training and preparation for PI Planning. This situation indicates that there may have been insufficient preparation and training which is crucial for a successful PI Planning event.

In SAFe, PI Planning is a significant event that requires thorough preparation to ensure that all participants are aligned and understand the process. The Release Train Engineer (RTE) plays a vital role in facilitating this event and ensuring that everyone, including Product Management, is prepared with the necessary content and understands the importance of maintaining established priorities and respecting the planning process¹².

When there is a lack of training and preparation:

*Product Management may not fully understand the impact of introducing last-minute changes to the backlog and priorities.

*Teams may become demotivated as their planning efforts are disrupted, leading to a decline in excitement and potentially affecting the quality of the planning outcomes.

*The ART's ability to estimate and commit to work can be compromised, leading to challenges in delivering value.

To prevent such issues, it is essential that:

*All stakeholders, including Product Management, receive adequate training on the PI Planning process and the importance of respecting established priorities¹.

*The RTE ensures that there is a continuous exploration process that drives the synthesis of a Vision, a Roadmap, and Backlogs, and through Pre- and Post-PI Planning events³.

*There is a collaborative approach to planning, where changes to priorities and scope are discussed and agreed upon by all stakeholders before the PI Planning event².

By addressing the lack of training and preparation, the RTE can help maintain the team's excitement and ensure a more effective and aligned PI Planning process.

NEW QUESTION # 122

How can a Release Train Engineer help unlock intrinsic motivation?

- A. Emphasize participation from senior leadership to expedite decisions
- B. Establish good incentives for aligning with the enterprise's goals
- C. Give tough feedback supportively and be willing to be more vulnerable
- D. Practice healthy conflict resolution between teams and team members

Answer: C

NEW QUESTION # 123

.....
