NEW QUESTION # 16

What are some characteristics of the SAP S/4HANA Migration Cockpit? Note: There are 2 correct answers to this question.

- A. Guidance and simulation of the migration process
- B. Extensibility using the Legacy System Migration Workbench
- C. Combining the local and remote schema approaches into one migration project
- D. Mapping source values to SAP S/4HANA target values

Answer: A,D

Explanation:

The SAP S/4HANA Migration Cockpit is a tool that facilitates the transfer of business data from a source system to SAP S/4HANA. It uses migration objects to identify and transfer the relevant data for a specific business object. The SAP S/4HANA Migration Cockpit has the following characteristics1:

* It allows mapping source values to SAP S/4HANA target values, as well as converting values that are migrated from source fields to target fields. This ensures data consistency and quality in the target system.

* It provides guidance and simulation of the migration process, as well as error handling and monitoring.

This helps to reduce the complexity and risk of data migration, and to ensure a smooth and successful data transfer.

* It does not support extensibility using the Legacy System Migration Workbench (LSMW), which is a tool for data migration from legacy systems to SAP systems. The SAP S/4HANA Migration Cockpit has its own extensibility framework, the SAP S/4HANA Migration Object Modeler, which allows creating and enhancing migration objects2.

* It does not combine the local and remote schema approaches into one migration project. The SAP S/4HANA Migration Cockpit offers three options for transferring data to SAP S/4HANA: using files, using staging tables, or using direct transfer from an SAP system1. Each option requires a separate migration project and has its own advantages and limitations3.
