### NEW QUESTION # 136

Which set of commands inserts the project into Git?

- A. `git init`

`git remote add python_programmer/device_status`  
`git push`

- A. Option A
- B. Option B
- C. Option C
- D. Option D

**Answer: A**

Explanation:

To insert the project into Git using the account `python_programmer`, one would need to initialize the local directory as a Git repository, add files to it, commit those files with an appropriate message, add a remote repository URL pointing to where the repository should be pushed on GitHub under `python_programmer`'s account, and finally push the changes up to that remote repository. Option A follows this process correctly:

'git init' initializes the local directory as a Git repository; 'git add "device\_status.py"' stages changes; 'git commit -m "Initial Revision"' commits staged changes with message; 'git remote add origin 6' adds new remote repo; 'git push -u origin master' pushes committed changes up to GitHub.
