ACP-120 Download Fee - ACP-120 Authorized Certification

Many students did not perform well before they use Jira Cloud Administrator actual test. They did not like to study, and they disliked the feeling of being watched by the teacher. They even felt a headache when they read a book. There are also some students who studied hard, but their performance was always poor. Basically, these students have problems in their learning methods. ACP-120 prep torrent provides students with a new set of learning modes which free them from the rigid learning methods.

ATLASSIAN Jira Cloud Administrator Sample Questions (Q41-Q46):

NEW QUESTION # 41
You need to identify issues that meet both conditions:
* Tom set the priority value to "Highest" sometime this month.
* The priority value may or may not be "Highest" now.
Which JQL query returns the expected results?

- A. priority was Highest by tom and (priority = Highest by tom after startOfMonth() or priority != Highest)
- B. priority was Highest by tom during (startOfMonth(), endOfMonth()) and priority = Highest or priority != Highest
- C. priority was Highest by tom after startOfMonth()
- D. priority changed to Highest by tom before endOfMonth()

Answer: C

Explanation:
To find issues where Tom set the priority to Highest during the current month, regardless of the current priority value, the JQL query must use the WAS operator to check the historical priority value and the BY clause to specify the user (Tom), along with a time range for the current month. The correct query is priority was Highest by tom after startOfMonth() (Option B).
* Explanation of the Correct Answer (Option B):
* The condition Tom set the priority value to "Highest" sometime this month requires checking the issue's change history for the priority field. The WAS operator checks if a field had a specific value at some point, and the BY clause filters for changes made by a specific user (Tom). The after startOfMonth() clause ensures the change occurred within the current month (from the first day of the month to the present).
* The condition the priority value may or may not be "Highest" now means the query should not filter based on the current priority value, which Option B correctly avoids by not including a current-state condition (e.g., priority = Highest).
* The query priority was Highest by tom after startOfMonth() returns issues where Tom changed the priority to Highest after the start of the current month, satisfying both conditions.
* Exact Extract from Documentation:
Advanced searching - operators reference
The WAS operator checks if a field had a specific value at some point in the issue's history.
* priority was Highest by tom after startOfMonth() returns issues where the priority field was set to Highest by the user tom after the start of the current month. Note: The WAS operator does not check the current field value, only historical values. Use after to specify a time range. (Source: Atlassian Support Documentation, "Advanced searching - operators reference")
* Why This Fits: The query uses WAS to check historical priority changes by Tom to Highest within the current month, without restricting the current priority, making Option B the correct answer.
* Why Other Options Are Incorrect:
* priority changed to Highest by tom before endOfMonth() (Option A):
* The CHANGED operator checks for transitions in field values, but before endOfMonth() includes all changes up to the end of the current month, including past months, which is too broad. The query needs to limit changes to the current month (e.g., after startOfMonth()).
* Extract from Documentation:
The CHANGED operator requires FROM and TO clauses for specific transitions. before endOfMonth() includes all prior changes, not just the current month.
(Source: Atlassian Support Documentation, "Advanced searching - operators reference")
* priority was Highest by tom during (startOfMonth(), endOfMonth()) and priority = Highest or priority != Highest (Option C):
* The during (startOfMonth(), endOfMonth()) clause is valid for time ranges, but the additional condition priority = Highest or priority != Highest is redundant and always true (it includes all issues). However, during is less precise than after startOfMonth(), as it may exclude changes on the last day of the month depending on timezone handling. This makes the query less optimal.
* Extract from Documentation:
The during clause defines a time range but may have edge cases with end dates. after startOfMonth() is simpler for current-month filtering.
(Source: Atlassian Support Documentation, "Advanced searching - operators reference")
* priority was Highest by tom and (priority = Highest by tom after startOfMonth() or priority != Highest) (Option D):
* The clause priority = Highest by tom after startOfMonth() is invalid, as the BY clause cannot be used with current-state conditions like priority = Highest. The WAS operator already covers the historical change, and the additional or priority != Highest is unnecessary and complicates the query.
* Extract from Documentation:
The BY clause is used with WAS or CHANGED, not with current-state conditions like priority = Highest.
(Source: Atlassian Support Documentation, "Advanced searching - operators reference")
* Additional Notes:
* The query assumes Highest is a valid priority value (check in Settings > Issues > Priorities).
* The query can be tested in Issues > Search for issues and saved as a filter.
* Ensure Tom's user account is correctly referenced (e.g., username or user ID) and that the user running the query has Browse Projects permission.

NEW QUESTION # 42

A public relations firm is using Jira to track projects by client engagement. Each new engagement with a client is tracked in a new project. Users are complaining that it is hard to navigate and search hundreds of projects.

View the Exhibit, which shows a sample of their projects on the View All Projects page.

Project	Key	Project Lead	Project Category	URL
Artist Studio - Facebook	ASFB	Jira Administrator	No Category	No URL
Artist Studio - Gallery Opening	ASGO	Jira Administrator	No Category	No URL
Artist Studio - Milan Tradeshow	ASMT	Jira Administrator	No Category	No URL
Integrated Tech Corp - Crave Project	ITCR	Jira Administrator	No Category	No URL
Integrated Tech Corp - Hannover Dev	ITHD	Jira Administrator	No Category	No URL
Integrated Tech Corp - Pandora	ITPDORA	Jira Administrator	No Category	No URL
Integrated Tech Corp - Travel Mag	ITTM	Jira Administrator	No Category	No URL
Marini Cafe - Advisory	MCA	Jira Administrator	No Category	No URL
Marini Cafe - Media Kit	MCAS	Jira Administrator	No Category	No URL

Identify three project settings that will immediately improve the viewing of projects on this page and the search results in Issue Navigator. (Choose three.)

- A. Add project tags.
- B. Set the project lead to the appropriate Project Administrator.
- C. Create project categories by client.
- D. Add project descriptions.
- E. Add client logos as project avatars.
- F. Add URLs for search engine optimization.

Answer: A,D,F

NEW QUESTION # 43

Your company will migrate to Jira. You plan to import with a CSV file.
Which fields are required as CSV columns for your import?

- A. Project, Summary
- B. Summary, Issue Type
- C. Summary
- D. Project
- E. Project, Issue Type

Answer: C

Explanation:
Explanation: Each CSV file must possess a heading row with a Summary column Reference:

NEW QUESTION # 44

A project has hundreds of old completed issues which are cluttering up the reports, searches, and dashboards.

The project administrator has the following requirements:
1. He wants to hide the old issues.
2. He wants to unhide issues, if needed.
3. He wants to control whether he himself sees the hidden issues, so they do not clutter his own daily work.
Which three configurations, when combined, will meet these requirements? (Choose three.)

- A. group
- B. global permission
- C. security level
- D. workflow condition
- E. project permission
- F. project role

Answer: A,E,F

NEW QUESTION # 45
Your business owners have told you to use roles as much as possible in Jira because it allows them to do things that groups cannot do.
When considering this, you need to be aware of those actions in Jira that require the use of groups rather than roles.
Identify two actions in Jira that require the use of groups. (Choose two.)

- A. granting permissions to teams coming from Active Directory
- B. granting Project Administration rights
- C. defining Issue Security levels
- D. granting system administrative rights
- E. controlling who can perform Bulk Change in a project
- F. allowing users to use transitions in all the workflows

Answer: B,C
