As the saying goes, time is the most precious wealth of all wealth. If you abandon the time, the time also abandons you. So it is also vital that we should try our best to save our time, including spend less time on preparing for exam. Our ARA-C01 guide torrent will

be the best choice for you to save your time. The three different versions have different functions. If you decide to buy our ARA-C01 Test Guide, the online workers of our company will introduce the different function to you. You will have a deep understanding of the three versions of our ARA-C01 exam questions. We believe that you will like our products.

## Snowflake SnowPro Advanced Architect Certification Sample Questions (Q69-Q74):

### NEW QUESTION # 69

What actions are permitted when using the Snowflake SQL REST API? (Select TWO).

- A. The use of a GET command
- B. The use of a CALL command to a stored procedure which returns a table
- C. Submitting multiple SQL statements in a single call
- D. The use of a ROLLBACK command
- E. The use of a PUT command

**Answer: A,B**

Explanation:

A: The Snowflake SQL REST API does support the use of a GET command, which can be used to retrieve the status of a previously submitted query or to fetch the results of a query once it has been executed.

D: The use of a CALL command to a stored procedure is supported, which can return a result set, including a table. This allows the invocation of stored procedures within Snowflake through the SQL REST API.

### NEW QUESTION # 70

Which semi structured data function interprets an input string as a JSON document, producing a VARIANT value.

- A. PARSE\_JSON
- B. PARSE\_XML
- C. STRIP\_JSON

**Answer: A**

### NEW QUESTION # 71

Role A has the following permissions:

- . USAGE on db1
- . USAGE and CREATE VIEW on schema1 in db1
- . SELECT on table1 in schema1

Role B has the following permissions:

- . USAGE on db2
- . USAGE and CREATE VIEW on schema2 in db2
- . SELECT on table2 in schema2

A user has Role A set as the primary role and Role B as a secondary role.

What command will fail for this user?

- A. use database db1;  
use schema schema1;  
create view v1 as select \* from db2.schema2.table2;
- B. use database db1;  
use schema schema1;  
select \* from db2.schema2.table2;
- C. use database db2;  
use schema schema2;  
select \* from db1.schema1.table1 union select \* from table2;
- D. use database db2;  
use schema schema2;  
create view v2 as select \* from db1.schema1.table1;

**Answer: D**

Explanation:

This command will fail because while the user has USAGE permission on db2 and schema2 through Role B, and can create a view in schema2, they do not have SELECT permission on db1.schema1.table1 with Role B. Since Role A, which has SELECT permission on db1.schema1.table1, is not the currently active role when the view v2 is being created in db2.schema2, the user does not have the necessary permissions to read from db1.schema1.table1 to create the view. Snowflake's security model requires that the active role have all necessary permissions to execute the command.

### NEW QUESTION # 72

A new user user\_01 is created within Snowflake. The following two commands are executed:

Command 1-> show grants to user user\_01;

Command 2 ~> show grants on user user\_01;

What inferences can be made about these commands?

- A. Command 1 defines which role owns user\_01  
Command 2 defines all the grants which have been given to user\_01
- **B. Command 1 defines all the grants which are given to user\_01  
Command 2 defines which role owns user\_01**
- C. Command 1 defines which user owns user\_01  
Command 2 defines all the grants which have been given to user\_01
- D. Command 1 defines all the grants which are given to user\_01  
Command 2 defines which user owns user\_01

**Answer: B**

Explanation:

The SHOW GRANTS command in Snowflake can be used to list all the access control privileges that have been explicitly granted to roles, users, and shares. The syntax and the output of the command vary depending on the object type and the grantee type specified in the command. In this question, the two commands have the following meanings:

\* Command 1: show grants to user user\_01; This command lists all the roles granted to the user user\_01.

The output includes the role name, the grantee name, and the granted by role name for each grant. This command is equivalent to show grants to user current\_user if user\_01 is the current user.

\* Command 2: show grants on user user\_01; This command lists all the privileges that have been granted on the user object user\_01. The output includes the privilege name, the grantee name, and the granted by role name for each grant. This command shows which role owns the user object user\_01, as the owner role has the privilege to modify or drop the user object.

Therefore, the correct inference is that command 1 defines all the grants which are given to user\_01, and command 2 defines which role owns user\_01.

### NEW QUESTION # 73

An Architect entered the following commands in sequence:

USER1 cannot find the table.

Which of the following commands does the Architect need to run for USER1 to find the tables using the Principle of Least Privilege? (Choose two.)

- A. GRANT ROLE PUBLIC TO ROLE INTERN;
- B. GRANT ALL PRIVILEGES ON DATABASE SANDBOX TO ROLE INTERN;
- **C. GRANT USAGE ON SCHEMA SANDBOX.PUBLIC TO ROLE INTERN;**
- D. GRANT OWNERSHIP ON DATABASE SANDBOX TO USER INTERN;
- **E. GRANT USAGE ON DATABASE SANDBOX TO ROLE INTERN;**

**Answer: C,E**

Explanation:

\* According to the Principle of Least Privilege, the Architect should grant the minimum privileges necessary for the USER1 to find the tables in the SANDBOX database.

\* The USER1 needs to have USAGE privilege on the SANDBOX database and the SANDBOX.PUBLIC schema to be able to

access the tables in the PUBLIC schema. Therefore, the commands B and C are the correct ones to run.

\* The command A is not correct because the PUBLIC role is automatically granted to every user and role in the account, and it does not have any privileges on the SANDBOX database by default.

\* The command D is not correct because it would transfer the ownership of the SANDBOX database from the Architect to the USER1, which is not necessary and violates the Principle of Least Privilege.

\* The command E is not correct because it would grant all the possible privileges on the SANDBOX database to the USER1, which is also not necessary and violates the Principle of Least Privilege.
