NEW QUESTION # 321

Your teammate has asked you to review the code below. Its purpose is to efficiently add a large number of small rows to a BigQuery table.

Which improvement should you suggest your teammate make?

- A. Write each row to a Cloud Storage object in parallel, then load into BigQuery.
- B. Write each row to a Cloud Storage object, then load into BigQuery.
- C. Include multiple rows with each request.
- **D. Perform the inserts in parallel by creating multiple threads.**

Answer: D

NEW QUESTION # 322

- A. Grant your user account the roles/storage.objectCreator role for the Cloud Storage bucket.
- **B. Grant your user account the roles/iam.serviceAccountUser role for the service-PROJECTA@gcf-admin-robot.iam.gserviceaccount.com service account.**
- C. It is supposed to write an object in a Cloud Storage bucket owned by project B. However, the write call is failing with the error "403 Forbidden".
What should you do to correct the problem?
- D. Enable the Cloud Storage API in project B.
- E. Grant the service-PROJECTA@gcf-admin-robot.iam.gserviceaccount.com service account the roles/storage.objectCreator role for the Cloud Storage bucket.

Answer: B

NEW QUESTION # 323

You are trying to connect to your Google Kubernetes Engine (GKE) cluster using kubectl from Cloud Shell. You have deployed your GKE cluster with a public endpoint. From Cloud Shell, you run the following command:

You notice that the kubectl commands time out without returning an error message. What is the most likely cause of this issue?

- A. The Cloud Shell is not part of the same VPC as the GKE cluster.
- B. A VPC firewall is blocking access to the cluster's endpoint.
- **C. Your Cloud Shell external IP address is not part of the authorized networks of the cluster.**
- D. Your user account does not have privileges to interact with the cluster using kubectl.

Answer: C

Explanation:

https://cloud.google.com/kubernetes-engine/docs/how-to/private-clusters#cloud_shell If you want to use Cloud Shell to access the cluster, you must add the public IP address of your Cloud Shell to the cluster's list of authorized networks.

NEW QUESTION # 324

Your organization has recently begun an initiative to replatform their legacy applications onto Google Kubernetes Engine. You need

to decompose a monolithic application into microservices. Multiple instances have read and write access to a configuration file, which is stored on a shared file system. You want to minimize the effort required to manage this transition, and you want to avoid rewriting the application code.

What should you do?

- A. Create a new persistent disk, and mount the volume as a shared PersistentVolume.
- B. Create a new Cloud Storage bucket, and mount it via FUSE in the container.
- **C. Create a new ConfigMap and volumeMount to store the contents of the configuration file.**
- D. Create a new Filestore instance, and mount the volume as an NFS PersistentVolume.

Answer: C

Explanation:

Explanation

<https://cloud.google.com/kubernetes-engine/docs/concepts/configmap>

ConfigMaps bind non-sensitive configuration artifacts such as configuration files, command-line arguments, and environment variables to your Pod containers and system components at runtime.

A ConfigMap separates your configurations from your Pod and components, which helps keep your workloads portable. This makes their configurations easier to change and manage, and prevents hardcoding configuration data to Pod specifications.

NEW QUESTION # 325

.....

This version is designed especially for those Professional-Cloud-Developer test takers who cannot go through extensive Google Professional-Cloud-Developer practice sessions due to a shortage of time. Since the Google Professional-Cloud-Developer PDF file works on smartphones, laptops, and tablets, one can use Google Professional-Cloud-Developer dumps without limitations of place and time.
