As is known to us, the AAISM certification has been increasingly important for a lot of modern people in the rapid development world. Why is the AAISM certification so significant for many people? Because having the certification can help people make their dreams come true, including have a better job, gain more wealth, have a higher social position and so on. Many people are difficult in getting the AAISM Certification successfully. If you also have trouble in passing your exam and getting your certification, we think it is time for you to use our AAISM quiz prep.

Maybe on other web sites or books, you can also see the related training materials. But as long as you compare Pass4training's product with theirs, you will find that our product has a broader coverage of the certification exam's outline. You can free download part of exam practice questions and answers about ISACA certification AAISM exam from Pass4training website as a try to detect the quality of our products. Why Pass4training can provide the comprehensive and high-quality information uniquely? Because we have a professional team of IT experts. They continue to use their IT knowledge and rich experience to study the previous years exams of ISACA AAISM and have developed practice questions and answers about ISACA AAISM exam certification exam. So Pass4training's newest exam practice questions and answers about ISACA certification AAISM exam are so popular among the candidates participating in the ISACA certification AAISM exam.

## 100% Pass Quiz ISACA - AAISM - ISACA Advanced in AI Security Management (AAISM) Exam –Efficient New Exam Cram

Our AAISM study practice guide boosts the function to stimulate the real exam. The clients can use our software to stimulate the real exam to be familiar with the speed, environment and pressure of the real AAISM exam and get a well preparation for the real exam. Under the virtual exam environment the clients can adjust their speeds to answer the AAISM Questions, train their actual combat abilities and be adjusted to the pressure of the real test. They can also have an understanding of their mastery degree of our AAISM study practice guide.

### ISACA AAISM Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>AI Risk Management: This section of the exam measures the skills of AI Risk Managers and covers assessing enterprise threats, vulnerabilities, and supply chain risk associated with AI adoption, including risk treatment plans and vendor oversight.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>AI Technologies and Controls: This section of the exam measures the expertise of AI Security Architects and assesses knowledge in designing secure AI architecture and controls. It addresses privacy, ethical, and trust concerns, data management controls, monitoring mechanisms, and security control implementation tailored to AI systems.</li> </ul>

Topic 3	<ul style="list-style-type: none"> <li>• AI Governance and Program Management: This section of the exam measures the abilities of AI Security Governance Professionals and focuses on advising stakeholders in implementing AI security through governance frameworks, policy creation, data lifecycle management, program development, and incident response protocols.</li> </ul>

## ISACA Advanced in AI Security Management (AAISM) Exam Sample Questions (Q74-Q79):

### NEW QUESTION # 74

Which of the following BEST describes an adversarial attack on an AI model?

- A. Reverse engineering the AI model using social engineering techniques
- B. Conducting denial-of-service (DoS) attacks against AI APIs
- C. Attacking the underlying hardware of the AI system
- D. Providing inputs that mislead the AI model into incorrect predictions

**Answer: D**

Explanation:

In AAISM, an adversarial attack is defined by maliciously crafted inputs designed to cause erroneous model behavior (misclassification, targeted misprediction) while the model architecture and parameters remain unchanged. Hardware compromise (A) and DoS (D) are system-level attacks, not adversarial ML per se.

Social engineering to obtain model information (C) is an information-gathering or security breach vector, distinct from input-space adversarial manipulation.

### NEW QUESTION # 75

When using AI as part of incident response, which of the following BEST ensures the automation aligns with regulatory and governance obligations?

- A. Train the AI incident response platform to mirror legacy response workflows and log containment
- B. Apply anomaly detection models to filter incoming threats and automate containment
- C. Implement a tiered automation strategy where severity ratings inform the need for human oversight
- D. Use deep learning models to autonomously classify all incidents

**Answer: C**

Explanation:

AAISM prescribes risk-based, human-in-the-loop orchestration for safety-critical or regulated actions. A tiered automation strategy that gates autonomy by incident severity, data sensitivity, and regulatory requirements ensures accountability, auditability, and proportionality, satisfying governance obligations. Full autonomy (A) risks non-compliance; simply mirroring legacy workflows (B) may not meet current obligations; broad auto-containment (C) lacks necessary oversight controls.

References: AI Security Management™ (AAISM) Body of Knowledge - Governance of AI-Driven Security Automation; Human Oversight and Escalation; Risk-Based Orchestration. AAISM Study Guide - Incident Response with AI: Controls, Approvals, and Auditability.

### NEW QUESTION # 76

Which of the following is the MOST serious consequence of an AI system correctly guessing the personal information of individuals and drawing conclusions based on that information?

- A. The exposure of personal information may result in litigation
- B. The publicly available output of the model may include false or defamatory statements about individuals
- C. The output may reveal information about individuals or groups without their knowledge
- D. The exposure of personal information may lead to a decline in public trust

**Answer: C**

Explanation:

The AAISM curriculum states that the most serious privacy concern occurs when AI systems infer and disclose sensitive personal or group information without the knowledge or consent of the individuals. This constitutes a direct breach of privacy rights and data protection principles, including those enshrined in GDPR and other global regulations. While litigation, reputational damage, or loss of trust are significant consequences, the unauthorized revelation of personal information through inference is classified as the most severe, because it directly undermines individual autonomy and confidentiality.

#### **NEW QUESTION # 77**

Which of the following would BEST help an organization align its AI initiatives with business objectives?

- A. Complying with applicable AI-related regulations
- **B. Establishing an AI governance committee**
- C. Protecting enterprise information used by AI projects
- D. Ensuring ethical use of AI technologies in projects

**Answer: B**

Explanation:

An AI governance committee provides cross-functional oversight to align AI strategy, investment, and risk appetite with business goals. It sets policies, prioritizes portfolios, ensures accountability, and integrates compliance, ethics, and security into decision-making. While compliance, ethics, and information protection are essential, governance is the primary mechanism that systematically connects AI initiatives to enterprise objectives.

#### **NEW QUESTION # 78**

A security assessment revealed that attackers could access sensitive company data through chat interface injection. What is the BEST mitigation?

- A. Manually reviewing AI model outputs
- **B. Implementing input validation and templates**
- C. Ensuring continuous monitoring and tagging
- D. Conducting regular security audits

**Answer: B**

Explanation:

AAISM explains that prompt injection attacks are best mitigated by:

- \* strict input validation
- \* templated prompts
- \* controlled context windows
- \* guardrail enforcement

These prevent malicious instructions from overriding system prompts.

Audits (A) are periodic, not preventive. Manual review (B) is not scalable. Monitoring (D) detects issues but does not block injection.
