100% Pass Quiz Google - Professional-Cloud-Security-Engineer - Google Cloud Certified - Professional Cloud Security Engineer Exam Pass-Sure Latest Braindumps Free

What's more, part of that Actual4Cert Professional-Cloud-Security-Engineer dumps now are free: https://drive.google.com/open?id=1qOFAFNLMpuw--_JGnKcH_ALHtRcqE76Y

Availability in different formats is one of the advantages valued by Google Cloud Certified - Professional Cloud Security Engineer Exam test candidates. It allows them to choose the format of Google Professional-Cloud-Security-Engineer Dumps they want. They are not forced to buy one format or the other to prepare for the Google Professional-Cloud-Security-Engineer Exam. Actual4Cert designed Google Cloud Certified - Professional Cloud Security Engineer Exam exam preparation material in Google Professional-Cloud-Security-Engineer PDF and practice test (online and offline). If you prefer PDF Dumps notes or practicing on the Google Professional-Cloud-Security-Engineer practice test software, use either.

To pass the exam, candidates must demonstrate their ability to design, implement, and maintain secure GCP solutions that meet industry best practices and regulatory requirements. They must also be able to analyze and mitigate security threats, as well as monitor and audit GCP security controls. By earning the Google Professional-Cloud-Security-Engineer certification, professionals can demonstrate their expertise in securing GCP and increase their career opportunities in cloud security.

Google Professional-Cloud-Security-Engineer certification exam is a valuable qualification for security professionals who want to demonstrate their expertise in securing GCP solutions. Professional-Cloud-Security-Engineer Exam measures the candidate's knowledge and skills in designing, implementing, and managing security solutions on the GCP, and it is one of the most prestigious certifications in the industry. Passing the exam requires a deep understanding of security best practices, compliance, and regulatory requirements, as well as proficiency in using various security tools and technologies.

Professional-Cloud-Security-Engineer Latest Braindumps Free 100% Pass | Pass-Sure Professional-Cloud-Security-Engineer: Google Cloud Certified -

Professional Cloud Security Engineer Exam 100% Pass

Actual4Cert Professional-Cloud-Security-Engineer study material also has a timekeeping function that allows you to be cautious and keep your own speed while you are practicing, so as to avoid the situation that you can't finish all the questions during the exam. With Google Cloud Certified - Professional Cloud Security Engineer Exam Professional-Cloud-Security-Engineer Learning Materials, you only need to spend half your money to get several times better service than others.

Google Cloud Certified - Professional Cloud Security Engineer Exam Sample Questions (Q18-Q23):

NEW QUESTION # 18
Your customer has an on-premises Public Key Infrastructure (PKI) with a certificate authority (CA). You need to issue certificates for many HTTP load balancer frontends. The on-premises PKI should be minimally affected due to many manual processes, and the solution needs to scale.
What should you do?

- A. Use Certificate Manager to import certificates issued from on-premises PKI and for the frontends.
  Leverage the gcloud tool for importing.
- B. Use the web applications with PKCS12 certificates issued from subordinate CA based on OpenSSL on-premises. Use the gcloud tool for importing. Use the External TCP/UDP Network load balancer instead of an external HTTP Load Balancer.
- C. Use a subordinate CA in the Google Certificate Authority Service from the on-premises PKI system to issue certificates for the load balancers.
- D. Use Certificate Manager to issue Google managed public certificates and configure it at HTTP the load balancers in your infrastructure as code (IaC).

Answer: C

NEW QUESTION # 19
You are on your company's development team. You noticed that your web application hosted in staging on GKE dynamically includes user data in web pages without first properly validating the inputted data. This could allow an attacker to execute gibberish commands and display arbitrary content in a victim user's browser in a production environment.
How should you prevent and fix this vulnerability?

- A. Set up an HTTPS load balancer, and then use Cloud Armor for the production environment to prevent the potential XSS attack.
- B. Use Cloud IAP based on IP address or end-user device attributes to prevent and fix the vulnerability.
- C. Use Web Security Scanner in staging to simulate an XSS injection attack, and then use a templating system that supports contextual auto-escaping.
- D. Use Web Security Scanner to validate the usage of an outdated library in the code, and then use a secured version of the included library.

Answer: C

Explanation:
There is mention about simulating in Web Security Scanner. "Web Security Scanner cross-site scripting (XSS) injection testing *simulates* an injection attack by inserting a benign test string into user-editable fields and then performing various user actions."
https://cloud.google.com/security-command-center/docs
/how-to-remediate-web-security-scanner-findings#xss
Reference: https://cloud.google.com/security-scanner/docs/remediate-findings

NEW QUESTION # 20
Your organization wants to be continuously evaluated against CIS Google Cloud Computing Foundations Benchmark v1.3.0 (CIS Google Cloud Foundation 1.3). Some of the controls are irrelevant to your organization and must be disregarded in evaluation. You need to create an automated system or process to ensure that only the relevant controls are evaluated.
What should you do?

- A. Activate Security Command Center (SCC) Premium. Create a rule to mute the security findings in SCC so they are not

- B. Ask an external audit company to provide independent reports including needed CIS benchmarks. In the scope of the audit, clarify that some of the controls are not needed and must be disregarded.
- C. Mark all security findings that are irrelevant with a tag and a value that indicates a security exception. Select all marked findings, and mute them on the console every time they appear.
  Activate Security Command Center (SCC) Premium.
- D. Download all findings from Security Command Center (SCC) to a CSV file. Mark the findings that are part of CIS Google Cloud Foundation 1.3 in the file. Ignore the entries that are irrelevant and out of scope for the company.

Answer: A

Explanation:
https://cloud.google.com/security-command-center/docs/how-to-mute-findings

NEW QUESTION # 21
Your privacy team uses crypto-shredding (deleting encryption keys) as a strategy to delete personally identifiable information (PII). You need to implement this practice on Google Cloud while still utilizing the majority of the platform's services and minimizing operational overhead. What should you do?

- A. Use client-side encryption before sending data to Google Cloud, and delete encryption keys on-premises
- B. Use customer-managed encryption keys to delete specific encryption keys.
- C. Use Cloud External Key Manager to delete specific encryption keys.
- D. Use Google default encryption to delete specific encryption keys.

Answer: B

Explanation:
Explanation
https://cloud.google.com/sql/docs/mysql/cmek
"You might have situations where you want to permanently destroy data encrypted with CMEK. To do this, you destroy the customer-managed encryption key version. You can't destroy the keyring or key, but you can destroy key versions of the key."

NEW QUESTION # 22
A customer terminates an engineer and needs to make sure the engineer's Google account is automatically deprovisioned. What should the customer do?

- A. Configure Cloud Directory Sync with their directory service to remove their IAM permissions in Cloud Identity.
- B. Configure Cloud Directory Sync with their directory service to provision and deprovision users from Cloud Identity.
- C. Use the Cloud SDK with their directory service to remove their IAM permissions in Cloud Identity.
- D. Use the Cloud SDK with their directory service to provision and deprovision users from Cloud Identity.

Answer: B

Explanation:
Explanation
https://cloud.google.com/identity/solutions/automate-user-provisioning#cloud_identity_automated_provisioning
"Cloud Identity has a catalog of automated provisioning connectors, which act as a bridge between Cloud Identity and third-party cloud apps."

NEW QUESTION # 23
......

Do you want to pass your exam by using the least time? Professional-Cloud-Security-Engineer exam braindumps of us can do that for you. With skilled professionals to compile and verify, Professional-Cloud-Security-Engineer exam dumps of us is high quality and accuracy. You just need to spend 48 to 72 hours on practicing, and you can pass your exam. We are pass guaranteed and money back guaranteed. If you fail to pass the exam, we will give you full refund. Besides, we offer you free demo to have a try before buying Professional-Cloud-Security-Engineer Exam Dumps. We also have free update for one year after purchasing.
