Plat-Dev-210 latest dumps & free Salesforce Plat-Dev-210 dumps torrent - Plat-Dev-210 free braindumps

We have applied the latest technologies to the design of our Salesforce Plat-Dev-210 test prep not only on the content but also on the displays. As a consequence you are able to keep pace with the changeable world and remain your advantages with our Salesforce Certified Omnistudio Developer Plat-Dev-210 Training Materials.

Salesforce Plat-Dev-210 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> Integrated Troubleshooting and Deployment: This final section measures the skills of a Support Engineer and focuses on identifying and resolving issues within Omnistudio tools. It involves diagnosing errors based on given scenarios and determining where breakdowns occur in the data flow for specific customer issues. This ensures the candidate can effectively troubleshoot, debug, and maintain solutions to ensure optimal performance and reliability.
Topic 2	<ul style="list-style-type: none"> Integration Procedures: This section measures the skills of an Integration Architect and involves designing and configuring Integration Procedures to automate processes and integrate systems. It requires comparing and contrasting different elements and configurations within Integration Procedures to meet specific use cases. Candidates are also tested on selecting the correct elements and properties to satisfy functional requirements, ensuring seamless data flow and process automation.
Topic 3	<ul style="list-style-type: none"> Omniscritps: This portion of the exam measures the skills of a Business Analyst and focuses on the use of OmniScripts to create dynamic, guided user experiences. It includes comparing and contrasting various OmniScript elements and their configurations to fulfill given use cases. The section also examines the candidate's understanding of the JSON structure that supports OmniScripts, as well as the ability to select appropriate elements and properties to address functional requirements effectively.
Topic 4	<ul style="list-style-type: none"> Expression Sets & Decision Matrices: This section measures the skills of a Logic Designer and covers the configuration and application of Expression Sets and Decision Matrices within Omnistudio tools. It requires demonstrating an understanding of how Expression Sets evaluate conditions and how Decision Matrices use rule-based logic to determine outcomes. This knowledge is essential for automating decisions and streamlining complex business processes.
Topic 5	<ul style="list-style-type: none"> Flexcards: This section of the exam measures the skills of a Solution Architect and covers the ability to design and configure FlexCards based on specific business requirements. It evaluates the candidate's knowledge in selecting appropriate card styles, defining data sources and fields, and implementing user actions across different card states. Additionally, this domain tests the understanding of constructing the underlying JSON data structure that powers the FlexCards framework, ensuring that the configured cards meet both functional and technical specifications.

Salesforce Certified Omnistudio Developer Sample Questions (Q79-Q84):

NEW QUESTION # 79

An OmniScript updates data from one Salesforce record, but when it completes, only some of the data is updated in Salesforce. A DataRaptor Load saves the data. What error could cause this behavior?

Choose 2 answers

- A. The input JSON paths In the DataRaptor Load do not match the JSON from the OmniScript.
- B. The fields that are not updated are read only in Salesforce.
- C. ContextId is misspelled in the merge code that passes the RecordId to the DataRaptor
- D. In the DataRaptor Load, in the Preview tab, the Record is from the wrong record type.

Answer: A,C

Explanation:

The input JSON paths In the DataRaptor Load must match the JSON from the OmniScript, otherwise the data will not be mapped correctly to the Salesforce fields. ContextId must be spelled correctly in the merge code that passes the RecordId to the DataRaptor, otherwise the DataRaptor will not be able to identify which record to update. The fields that are not updated are not necessarily read only in Salesforce, as they could be editable by other means. In the DataRaptor Load, in the Preview tab, the Record is from the wrong record type has no effect on updating data in Salesforce, as it is only used for testing purposes.

NEW QUESTION # 80

A developer is configuring an Integration Procedure Action in an OmniScript. The OmniScript needs a JSON response from the Integration Procedure but does not need to wait for the response for the user to proceed.

Which feature should the developer enable?

- A. Toast Completion
- **B. Invoke Mode Fire and Forget**
- C. Use Future
- D. Invoke Mode Non-Blocking

Answer: B

Explanation:

In OmniStudio, the Invoke Mode: Fire and Forget setting allows an OmniScript to call an Integration Procedure asynchronously, meaning it does not wait for the response to complete before continuing user interaction.

* C. Invoke Mode Fire and Forget - This is the correct setting. It's designed specifically for use cases where the user experience should not be blocked by backend processing.

Incorrect Options:

- * A. Use Future is not a valid OmniScript configuration option.
- * B. Invoke Mode Non-Blocking is not an official setting in OmniStudio terminology.
- * D. Toast Completion is a UI notification setting and does not impact execution behavior.

:

OmniStudio Developer Guide # Integration Procedure Actions in OmniScripts

NEW QUESTION # 81

A developer needs to display the following information together on one FlexCard:

- * Account name, address, phone number, website
 - * Primary contact first name, contact name, address, phone number, email
- The account information must always be visible, and the contact information should only be visible as needed by the user.

What approach should the developer use to display the contact information on the card?

- **A. Set the collapsible property on the block element**
- B. Set the class "collapsible" on the block element
- C. Use a conditional FlexCard State
- D. Use a Data table element

Answer: A

Explanation:

Setting the collapsible property on the block element allows the user to expand or collapse the block as needed. Using a Data table element is not suitable for displaying contact information. Setting the class "collapsible" on the block element has no effect. Using a conditional FlexCard State requires a condition to be met, not a user choice.

NEW QUESTION # 82

A developer needs to configure a Data Mapper to retrieve data from a single object. The structure of the output data does not need to be changed.

Following best practices, which type of Data Mapper should the developer use?

- A. Data Mapper Load
- **B. Data Mapper Turbo Extract**
- C. Data Mapper Transform
- D. Data Mapper Extract

Answer: B

Explanation:

The correct answer is D. Data Mapper Turbo Extract, based on best practices in the official OmniStudio documentation.

From the OmniStudio Developer Guide # DataRaptors # Turbo Extract:

* DataRaptor Turbo Extract is a lightweight, high-performance extract designed specifically for retrieving data from a single Salesforce object, where no data transformation or complex joins are required.

* It is recommended over DataRaptor Extract for performance reasons when only one object and minimal transformation is needed.

Why not the others?

- * A. DataRaptor Load is used for writing data to Salesforce, not retrieving.
- * B. DataRaptor Transform is used when you need to transform data, not simply extract it.

* C. DataRaptor Extract can be used, but Turbo Extract is preferred for the use case of single object, no transformation - per best practices.

Salesforce OmniStudio Developer Guide # DataRaptor Turbo Extract Best Practices OmniStudio Certification Study Guide # "When to use Turbo Extract"

NEW QUESTION # 83

A developer is building an OmniScript and needs to retrieve data from a single field in a Salesforce record. Which OmniScript element does this?

- A. HTTP Action
- B. DataRaptor Post Action
- C. Lookup
- D. Select

Answer: C

Explanation:

The Lookup element is used to retrieve data from a single field in a Salesforce record. The Lookup element allows the developer to specify the object, field, and filter criteria for the data retrieval. The Select element is used to display a list of options for the user to choose from. The HTTP Action element is used to send or receive data from an external system using HTTP methods. The DataRaptor Post Action element is used to create or update Salesforce records using a DataRaptor Transform.

NEW QUESTION # 84

.....

You can learn Plat-Dev-210 quiz torrent skills and theory at your own pace, and you will save more time and energy than you can complete other things. We also provide every candidate who wants to get certification with free Demo to check our materials. No other Plat-Dev-210 study materials or study dumps can bring you the knowledge and preparation that you will get from the Plat-Dev-210 Study Materials available only from SureTorrent. Not only will you be able to pass any Plat-Dev-210 test, but will get a higher score, if you choose our Plat-Dev-210 study materials.
