Pass Guaranteed Salesforce - Plat-Dev-301 - Salesforce Certified Platform Developer II - Multiple Choice High Hit-Rate Pass4sure Dumps Pdf

Do you want to pass the Plat-Dev-301 exam by the first attempt? Our Plat-Dev-301 exam questions can be our best assistant on your way to success. And the pass rate of our Plat-Dev-301 study guide is high as 98% to 100%, which also prove our excellent quality. If you study with our Plat-Dev-301 preparation guide, they will strengthen your learning skills, add to your knowledge and will enable you to revise the entire syllabus more than once. And you will pass for sure with our Plat-Dev-301 learning quiz.

Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q101-Q106):

NEW QUESTION # 101

A company uses Opportunities to track sales to their customers and their org has millions of Opportunities. They want to begin to track revenue over time through a related Revenue object.

As part of their initial implementation, they want to perform a one-time seeding of their data by automatically creating and populating Revenue records for Opportunities, based on complex logic.

They estimate that roughly 100,000 Opportunities will have Revenue records created and populated.

What is the optimal way to automate this?

- A. Use Database.executeBatch() to invoke a Queueable class.
- B. Use system.schedule() to schedule a Schedulable class.
- C. Use system.enqueueJob() to invoke a Queueable class.
- **D. Use Database.executeBatch() to invoke a Database.Batchable class.**

Answer: D

Explanation:

For a one-time bulk operation on a large data set, using a Database.Batchable class is the best approach. This allows complex logic to be processed in manageable chunks and efficiently manages system resources.

NEW QUESTION # 102

A user receives the generic "An internal server error has occurred" while interacting with a custom Lightning component.

What should the developer do to ensure a more meaningful message?

- A. Add an error-view component to the markup.
- **B. Use an AuraHandledException in a try-catch block.**
- C. Add an onerror event handler to the tag.
- D. Use platform events to process the error

Answer: B

Explanation:

Use AuraHandledException in try-catch for custom errors. It enables sending meaningful, user-friendly error messages to the Lightning component.

NEW QUESTION # 103

An org records customer order information in a custom object, order__c, that has fields for the shipping address. A developer is tasked with adding code to calculate shipping charges on an order, based on a flat percentage rate associated with the region of the

shipping address.

What should the developer use to store the rates by region, so that when the changes are deployed to production no additional steps are needed for the calculation to work?

- A. Custom hierarchy setting
- B. Custom object
- C. Custom list setting
- **D. Custom metadata type**

Answer: D

Explanation:

Custom metadata types are ideal for storing configuration data such as shipping rates by region. These rates can be deployed to production without additional steps and can be queried in Apex, allowing the calculations to work immediately post-deployment.

NEW QUESTION # 104

When developing a Lightning web component, which setting displays lightninglayout-items in one column on small devices, such as mobile phones, and in two columns on tablet-size and desktop-size screens?

- **A. Set size="12" medium-device-size="6"**
- B. Set size="6" small-device-size="12"
- C. Set size="12" tablet-device-size="6"
- D. Set size="6" mobile-device-size="12"

Answer: A

Explanation:

To display lightning-layout-items in one column on small devices and in two columns on larger devices, you should set the size attribute to "12" for small devices and the medium-device-size attribute to "6". This ensures that on small devices each item takes the full width, and on medium or larger devices, items take up half the width.

NEW QUESTION # 105

A company uses Salesforce to sell products to customers. They also have an external product information management (PIM) system that is the system of record for products.

A developer received these requirements:

* Whenever a product is created or updated in the PIM, a product must be created or updated as a Product? record in Salesforce and a PricebookEntry record must be created or updated automatically by Salesforce.

= The PricebookEntry should be created in a Pricebook2 that is specified in a custom setting.

What should the developer use to satisfy these requirements?

- A. Invocable Action
- B. SOject Tree REST
- C. Event Monitoring
- **D. Custom Apex REST**

Answer: D

Explanation:

Custom Apex REST services are the optimal solution for integrating Salesforce with an external PIM system. When a product is created or updated in the PIM, the external system can make a REST call to a custom Apex REST endpoint in Salesforce, which then can create or update the Product2 and PricebookEntry records. This method allows using custom settings to determine the Pricebook2 dynamically.

NEW QUESTION # 106
