Salesforce Certified Platform Developer I Sample Questions (Q214-Q219):

NEW QUESTION # 214

Where are two locations a developer can look to find information about the status of asynchronous or future calls? Choose 2 answers

- A. Apex Flex Queue (Missed)
- B. Apex Jobs (Missed)
- C. Paused Flow Interviews component
- D. Time-Based Workflow Monitor

Answer: A,B

NEW QUESTION # 215

Management asked for opportunities to be automatically created for accounts with annual revenue greater than \$1,000,000. A developer created the following trigger on the Account object to satisfy this requirement.

```
for(Account a: Trigger.new) {  
    if(a.AnnualRevenue > 1000000) {  
        List<Opportunity> opplist = [SELECT Id FROM Opportunity WHERE accountId = :a.Id];  
        if(opplist.size() == 0) {  
            Opportunity oppty = new Opportunity(Name = a.name, StageName = 'Prospecting',  
            CloseDate = system.today().addDays(30));  
            insert oppty;  
        }  
    }  
}
```

Users are able to update the account records via the UI and can see an opportunity created for high annual revenue accounts. However, when the administrator tries to upload a list of 179 accounts using Data Loader, It fails with system. Exception errors. Which two actions should the developer take to fix the code segment shown above?

Choose 2 answers

- A. Use Database.query to query the opportunities.
- B. **Query for existing opportunities outside the for loop.**
- C. **Move the DML that saves opportunities outside the for loop.**
- D. Check if all the required fields for Opportunity are being added on creation.

Answer: B,C

Explanation:

The error occurs because the code is not bulkified, meaning it doesn't efficiently handle more than one record at a time. In Salesforce, there are governor limits that restrict the number of records you can process to ensure that no single operation consumes too many resources. In this case:

* Option C: Moving the DML that saves opportunities outside of the for loop will help in bulkifying the code to handle multiple records efficiently without hitting governor limits.

* Option D: Querying for existing opportunities outside of the for loop will also contribute to making sure that the code is bulkified and efficient.

NEW QUESTION # 216

A developer needs to prevent the creation of Request__c records when certain conditions exist in the system. A RequestLogic class exists that checks the conditions.

What is the correct implementation?

- A.

```
trigger RequestTrigger on Request__c (after insert) {  
    if (RequestLogic.isValid(Request__c))  
        Request.addError('Your request cannot be created at this  
        time.');
```

- B.

```
}
```

```
trigger RequestTrigger on Request__c (after insert) {  
    RequestLogic.validateRecords(trigger.new);
```

- C.

```
}
```

```
trigger RequestTrigger on Request__c (before insert) {  
    RequestLogic.validateRecords(trigger.new);
```

```

}
trigger RequestTrigger on Request__c (before insert) {
    if (RequestLogic.isValid(Request__c))
        Request.addError('Your request cannot be created at this
time.');
}

```

- D.

Answer: C

NEW QUESTION # 217

Universal Containers (UC) is developing a process for their sales teams that requires all sales reps to go through a set of scripted steps with each new customer they create. In the first steps of collecting information, UC's ERP system must be checked via a REST endpoint to see if the customer exists. If the customer exists, the data must be presented to the sales rep in Salesforce. Which two should a developer implement to satisfy the requirements? Choose 2 answer

- A. Invocable method
- B. Trigger
- C. Flow
- D. Future method

Answer: A,D

NEW QUESTION # 218

A developer is working on a project to import data from an external system into Salesforce. The data contains sensitive information that should not be visible to all users in Salesforce.

What should the developer do to ensure that the data is secure?

- A. Use the Apex Data Loader to import the into and write Apex code to handle security and access control.
- B. Use the Salesforce CLI to import the data and set up user permissions to restrict access to sensitive data.
- C. Use the Data Import Wizard to import the data and set up field-level security to restrict access to sensitive fields.
- D. Use a third-party tool to encrypt the sensitive data before importing it into Salesforce.

Answer: A

NEW QUESTION # 219
