Salesforce Analytics-Arch-201 Web-Based Practice Exam Questions

It is understandable that different people have different preference in terms of Analytics-Arch-201 study guide. Taking this into consideration, and in order to cater to the different requirements of people from different countries in the international market, we have prepared three kinds of versions of our Analytics-Arch-201 Preparation questions in this website, namely, PDF version, APP online and software version, and you can choose any one of them as you like. You will our Analytics-Arch-201 exam dumps are the best!

Salesforce Certified Tableau Architect Sample Questions (Q103-Q108):

NEW QUESTION # 103

In implementing Tableau Bridge for an organization using Tableau Cloud, what is an important consideration for maintaining data security and integrity?

- A. Using Tableau Bridge to store a copy of all on-premises data on the cloud for backup purposes
- B. Limiting Tableau Bridge access to only a few select high-level administrators for security reasons
- C. Completely isolating Tableau Bridge from the internal network to prevent any potential security breaches
- D. Configuring Tableau Bridge with appropriate authentication and encryption for secure data transmission

Answer: D

Explanation:

Configuring Tableau Bridge with appropriate authentication and encryption for secure data transmission When implementing Tableau Bridge, it's important to configure it with proper authentication and encryption measures. This ensures secure transmission of data from on-premises sources to Tableau Cloud, maintaining data security and integrity without exposing sensitive information. Option A

is incorrect because Tableau Bridge does not store copies of data on the cloud; it facilitates live data connections. Option B is incorrect as limiting access to only a few administrators can hinder operational flexibility and is not necessary for maintaining security. Option D is incorrect because completely isolating Tableau Bridge from the internal network can render it ineffective in connecting on-premises data to Tableau Cloud.

NEW QUESTION # 104

When integrating Tableau content into a custom web application using connected apps, what is a key step in configuring this integration securely?

- A. Requiring manual authentication for each user session in the web application to access Tableau content
- B. Configuring the web application to bypass Tableau Server's security protocols for a direct connection
- C. Allowing the connected app to access Tableau Server content without any restrictions for ease of integration
- **D. Setting up connected apps in Tableau Server with specific permissions and access controls for the web application**

Answer: D

Explanation:

Setting up connected apps in Tableau Server with specific permissions and access controls for the web application A key step in securely integrating Tableau content into a custom web application is to set up connected apps in Tableau Server with specific permissions and access controls. This approach ensures that the web application can securely access the necessary Tableau content while maintaining appropriate security and access restrictions. Option A is incorrect because allowing unrestricted access poses a significant security risk. Option C is incorrect as requiring manual authentication for each session can be cumbersome and may not be necessary with the proper configuration of connected apps. Option D is incorrect because bypassing Tableau Server's security protocols would undermine the security and integrity of the data and content.

NEW QUESTION # 105

When implementing SSL encryption in Tableau Server, what is a critical step to ensure secure communication between the server and clients?

- **A. Obtaining and installing a valid SSL certificate from a trusted certificate authority on Tableau Server**
- B. Setting up a dedicated SSL decryption server to handle incoming SSL traffic
- C. Enabling SSL on client devices that access Tableau Server
- D. Configuring Tableau Server to use a specific set of encryption algorithms

Answer: A

Explanation:

Obtaining and installing a valid SSL certificate from a trusted certificate authority on Tableau Server Obtaining and installing a valid SSL certificate from a trusted certificate authority is a crucial step in implementing SSL encryption in Tableau Server. This certificate is used to establish a secure communication channel between the server and clients, ensuring that data transmitted is encrypted and protected from interception or tampering. Option A is incorrect because while configuring encryption algorithms is part of SSL configuration, obtaining and installing a valid SSL certificate is the primary and most critical step. Option C is incorrect as setting up a dedicated SSL decryption server is not a standard practice for SSL implementation in Tableau Server. Option D is incorrect because enabling SSL on client devices, while important for overall security, is not directly related to the implementation of SSL on Tableau Server.

NEW QUESTION # 106

When troubleshooting LDAP integration issues in Tableau Server, what common aspect should be checked first?

- A. The firewall settings on the client machines trying to authenticate with Tableau Server
- B. The network speed and latency between Tableau Server and the LDAP server
- C. The compatibility of the LDAP server's software version with Tableau Server
- **D. The correctness of the LDAP server address and port number configured in Tableau Server**

Answer: D

Explanation:

The correctness of the LDAP server address and port number configured in Tableau Server A common and primary aspect to

check when troubleshooting LDAP integration issues is the correctness of the LDAP server address and port number in the Tableau Server configuration. Incorrect server address or port configuration can lead to failed connections and authentication problems, making it a critical first step in the troubleshooting process. Option A is incorrect because while network speed and latency are important, they are not usually the first aspect to be checked in LDAP integration issues. Option B is incorrect as software version compatibility, although important, is usually validated during the initial setup and is less likely to be the cause of sudden integration issues. Option D is incorrect because firewall settings on client machines are not typically related to LDAP authentication issues on the server side.

NEW QUESTION # 107

When building an admin dashboard for tracking user engagement on Tableau Server, what is a vital metric to include?

- A. The total number of active users on the server
- B. The server's uptime and downtime statistics
- C. The disk space usage of the Tableau Server
- **D. The average number of views created by users per month**

Answer: D

Explanation:

The average number of views created by users per month For an admin dashboard aimed at tracking user engagement on Tableau Server, including the metric of the average number of views created by users per month is vital. This metric offers a clear insight into how actively users are interacting with and utilizing the server, thereby indicating the level of engagement and adoption. Option A is incorrect because disk space usage, while important, does not directly measure user engagement. Option C is incorrect as uptime and downtime statistics, while crucial for overall server health, do not directly indicate user engagement. Option D is incorrect because the total number of active users provides a static measure and does not reflect the dynamic nature of user engagement over time.

NEW QUESTION # 108

.....

The dynamic society prods us to make better. Our services on our Analytics-Arch-201 exam questions are also dependable in after-sales part with employees full of favor and genial attitude towards job. So our services around the Analytics-Arch-201 training materials are perfect considering the needs of exam candidates all-out. They bravely undertake the duties. Our staff knows our Analytics-Arch-201 study quiz play the role of panacea in the exam market which aim to bring desirable outcomes to you.

Analytics-Arch-201 Latest Test Preparation: https://www.real4exams.com/Analytics-Arch-201_braindumps.html

And our Analytics-Arch-201 exam questions will help you pass the Analytics-Arch-201 exam for sure, Salesforce Question Analytics-Arch-201 Explanations You will easily find there are many useful small buttons to assist your learning, Salesforce Question Analytics-Arch-201 Explanations So as the aftersales services 24/7 offering help for you, Salesforce Question Analytics-Arch-201 Explanations Pass for sure with the high-quality exam dumps, If your Analytics-Arch-201 exam test is coming soon, I think Analytics-Arch-201 free training material will be your best choice.

Adding a Hyperlink to a Worksheet, Use this tool to help you create web pages in a snap, And our Analytics-Arch-201 Exam Questions will help you pass the Analytics-Arch-201 exam for sure.
