Which update must the developer make in the flow?

- A. Add a new Update Records element.
- B. Add a new Create Records element.
- C. Add a new Roll Back Records element.
- D. Add a new Get Records element.

Answer: B

NEW QUESTION # 100
The Review__c object has a lookup relationship up to the Job_Application__c object. The Job_Application__c object has a master-detail relationship up the Position__c object. The relationship field names are based on the auto-populated defaults. What is the recommended way to display field data from the related Review__c records on a Visualforce page for a single Position__c record?

- A. Utilize the Standard Controller for Position__c and cross-object Formula fields on the job_Application__c object to display Review__c data.
- B. Utilize the Standard Controller for Position__c and cross-object Formula fields on the Review__c object to display Review__c data.
- C. Utilize the Standard Controller for position__c and expression syntax in the page to display related Review__c data through the job_Application__c object
- D. Utilize the Standard Controller for position__c and a Controller Extension to query for Review__c data.

Answer: D

NEW QUESTION # 101
What should a developer use to script the deployment and unit test execution as part of continuous integration?

- A. Developer Console
- B. Salesforce CLI
- C. VS Code
- D. Execute Anonymous

Answer: B

Explanation:
To script the deployment and unit test execution as part of continuous integration (CI), developers use tools that can be automated and run from the command line or scripts.
Option D: Salesforce CLI
Correct.
The Salesforce CLI (Command-Line Interface) is a powerful command-line tool that allows developers to interact with Salesforce orgs.

It supports scripting of deployments using commands like sfdx force:source:deploy and running unit tests using sfdx force:apex:test:run.

The CLI can be integrated into CI/CD pipelines to automate deployments and testing.

While Visual Studio Code is a powerful IDE for Salesforce development, it is primarily used for interactive development.

It is not a scripting tool and is not suitable for automation in CI/CD pipelines.

The Developer Console is a web-based tool within Salesforce for interactive development and debugging.

It cannot be used for scripting or automation as part of CI/CD processes.

Execute Anonymous is used to run Apex code snippets in an ad-hoc manner.

It is not suitable for scripting deployments or unit test execution in CI/CD.

Salesforce CLI Command Reference

Incorrect Options:

Option A: VS Code

Incorrect.

Salesforce Extensions for VS Code

Option B: Developer Console

Incorrect.

Developer Console Overview

Option C: Execute Anonymous

Incorrect.

Executing Anonymous Apex Code

Conclusion:

The correct tool for scripting deployment and unit test execution in CI/CD is Salesforce CLI.

NEW QUESTION # 102

How can a custom type be identified as unique when added to a Set?

- A. The class must have a method with the @InvocableMethod annotation
- B. The class must implement the Equals and Hashcode methods
- C. Methods in the class must be static
- D. Methods in the class must be global

Answer: B

NEW QUESTION # 103

Developers at Universal Containers (UC) use version control to share their code changes, but they notice that when they deploy their code to different environments they often have failures. They decide to set up Continuous Integration (CI).

What should the UC development team use to automatically run tests as part of their CI process?

- A. Developer Console
- B. Salesforce CLI
- C. Force.com Toolkit
- D. Visual Studio Code

Answer: B

Explanation:

Why Salesforce CLI?

The Salesforce CLI supports scripting for Continuous Integration (CI) pipelines, allowing automatic testing and deployment as part of the CI process.

Why Not Other Options?

B: Visual Studio Code is a development IDE, not a CI tool.

C: Force.com Toolkit is outdated and does not support CI processes.

D: Developer Console is for debugging and manual testing, not automation.
