So, don't feel it with a heavy heart, but stand again, hold to your confidence, and think about how you can prepare successfully for the Data-Cloud-Consultant test.

Salesforce Certified Data Cloud Consultant Sample Questions (Q131-Q136):

NEW QUESTION # 131

Which two dependencies need to be removed prior to disconnecting a data source?

Choose 2 answers

- A. Segment
- B. Activation target
- C. Activation
- D. Data stream

Answer: A,D

Explanation:

Dependencies in Data Cloud:

Before disconnecting a data source, all dependencies must be removed to prevent data integrity issues.

Reference: Salesforce Data Source Management Documentation

Identifying Dependencies:

Segment: Segments using data from the source must be deleted or reassigned.

Data Stream: The data stream must be disconnected, as it directly relies on the data source.

Reference: Salesforce Segment and Data Stream Management Guide

Steps to Remove Dependencies:

Remove Segments:

Navigate to the Segmentation interface in Salesforce Data Cloud.

Identify and delete segments relying on the data source.

Disconnect Data Stream:

Go to the Data Stream settings.

Locate and disconnect the data stream associated with the source.

Reference: Salesforce Segment Deletion and Data Stream Disconnection Tutorial Practical Application:

Example: When preparing to disconnect a legacy CRM system, ensure all segments and data streams using its data are properly removed or migrated.

Reference: Salesforce Data Source Disconnection Best Practices

NEW QUESTION # 132

Cumulus Financial created a segment called Multiple Investments that contains individuals who have invested in two or more mutual funds.

The company plans to send an email to this segment regarding a new mutual fund offering, and wants to personalize the email content with information about each customer's current mutual fund investments.

How should the Data Cloud consultant configure this activation?

- A. Include Fund Name and Fund Type by default for post processing in the target system.
- B. Include Fund Type equal to "Mutual Fund" as a related attribute. Configure an activation based on the new segment with no additional attributes.
- C. Choose the Multiple Investments segment, choose the Email contact point, and add related attribute Fund Type.
- D. Choose the Multiple Investments segment, choose the Email contact point, add related attribute Fund Name, and add related attribute filter for Fund Type equal to "Mutual Fund".

Answer: D

Explanation:

Explanation

To personalize the email content with information about each customer's current mutual fund investments, the Data Cloud consultant needs to add related attributes to the activation. Related attributes are additional data fields that can be sent along with the segment to the target system for personalization or analysis purposes. In this case, the consultant needs to add the Fund Name attribute, which contains the name of the mutual fund that the customer has invested in, and apply a filter for Fund Type equal to "Mutual Fund" to ensure that only relevant data is sent. The other options are not correct because:

- * A. Including Fund Type equal to "Mutual Fund" as a related attribute is not enough to personalize the email content. The consultant also needs to include the Fund Name attribute, which contains the specific name of the mutual fund that the customer has invested in.
- * C. Adding related attribute Fund Type is not enough to personalize the email content. The consultant also needs to add the Fund Name attribute, which contains the specific name of the mutual fund that the customer has invested in, and apply a filter for Fund Type equal to "Mutual Fund" to ensure that only relevant data is sent.
- * D. Including Fund Name and Fund Type by default for post processing in the target system is not a valid option. The consultant needs to add the related attributes and filters during the activation configuration in Data Cloud, not after the data is sent to the target system. NEW QUESTION # 133

Cloud Kicks plans to do a full deletion of one of its existing data streams and its underlying data lake object (DLO). What should the consultant consider before deleting the data stream?

- A. The underlying DLO can be used in a data transform.
- B. The data stream must be associated with a data kit.
- C. The data stream can be deleted without implicitly deleting the underlying DLO.
- D. The underlying DLO cannot be mapped to a data model object.

Answer: A

Explanation:

Data Streams and DLOs: In Salesforce Data Cloud, data streams are used to ingest data, which is then stored in Data Lake Objects (DLOs).

Deletion Considerations: Before deleting a data stream, it's crucial to consider the dependencies and usage of the underlying DLO.

Data Transform Usage:

* Impact of Deletion: If the underlying DLO is used in a data transform, deleting the data stream will affect any transforms relying on that DLO.

* Dependency Check: Ensure that the DLO is not part of any active data transformations or processes that could be disrupted by its deletion.

References:

* Salesforce Data Cloud Documentation: Data Streams

* Salesforce Data Cloud Documentation: Data Transforms

NEW QUESTION # 134

What should a user do to pause a segment activation with the intent of using that segment again?

- A. Delete the segment.
- B. Stop the publish schedule.
- C. Deactivate the segment.
- D. Skip the activation.

Answer: C

Explanation:

The correct answer is A. Deactivate the segment. If a segment is no longer needed, it can be deactivated through Data Cloud and applies to all chosen targets. A deactivated segment no longer publishes, but it can be reactivated at any time¹. This option allows the user to pause a segment activation with the intent of using that segment again.

The other options are incorrect for the following reasons:

* B. Delete the segment. This option permanently removes the segment from Data Cloud and cannot be undone². This option does not allow the user to use the segment again.

* C. Skip the activation. This option skips the current activation cycle for the segment, but does not affect the future activation cycles³. This option does not pause the segment activation indefinitely.

* D. Stop the publish schedule. This option stops the segment from publishing to the chosen targets, but does not deactivate the

segment4. This option does not pause the segment activation completely.

- * 4: Stop a Publish Schedule article on Salesforce Help

NEW QUESTION # 135

A Data Cloud consultant tries to save a new 1-to-1 relationship between the Account DMO and Contact Point Address DMO but gets an error.

What should the consultant do to fix this error?

- **A. Map additional fields to the Contact Point Address DMO.**
- B. Make sure that the total account records are high enough for Identity resolution.
- C. Map Account to Contact Point Email and Contact Point Phone also.
- D. Change the cardinality to many-to-one to accommodate multiple contacts per account.

Answer: A

NEW QUESTION # 136

.....

How to get a good job? If you are a freshman, a good educational background and some useful qualifications certification will make you outstanding.
