

Download Free Updated NewPassLeader Juniper JN0-363 Exam Dumps after Paying Affordable Charges

P.S. Free 2026 Juniper JN0-363 dumps are available on Google Drive shared by NewPassLeader: <https://drive.google.com/open?id=16J-OqVyb3NvzLUBt2dEfkvheyBOBMQZ>

Our JN0-363 exam question has been widely praised by all of our customers in many countries and our company has become the leader in this field. Our JN0-363 exam questions boost varied functions and they include the self-learning and the self-assessment functions, the timing function and the function to stimulate the JN0-363 Exam to make you learn efficiently and easily. There are many advantages of our JN0-363 study tool. To understand the details of our JN0-363 practice braindump, you can visit our website NewPassLeader.

The JN0-363 Exam covers a range of topics related to service provider routing and switching, including OSPF, BGP, MPLS, Layer 2 VPNs, Layer 3 VPNs, and more. JN0-363 exam is designed to test the candidate's knowledge and understanding of these topics, as well as their ability to configure, monitor, and troubleshoot Juniper Networks devices.

Authorized JN0-363 Exam Material & Valuable JN0-363 Test Study Guide & Professional Juniper Service Provider Routing and Switching, Specialist (JNCIS-SP)

In order to help you enjoy the best learning experience, our PDF JN0-363 practice engine supports you download on your computers and print on papers. You must be inspired by your interests and motivation. Once you print all the contents of our JN0-363 practice dumps on the paper, you will find what you need to study is not as difficult as you imagined before. Also, you can make notes on your papers to help you memorize and understand the difficult parts of the JN0-363 Exam Questions.

Juniper Service Provider Routing and Switching, Specialist (JNCIS-SP) Sample Questions (Q14-Q19):

NEW QUESTION # 14

Exhibit.

The exhibit shows Juniper Junos CLI output. The user is in the 'edit routing-options' configuration mode. They run 'show aggregate' to see an aggregate route for 172.21.0.0/22. Then, they run 'show route protocol aggregate' to view the routing table, which shows 21 destinations and 21 routes (20 active, 0 holddown, 1 hidden) for the 'inet.0' interface. The 'inet6.0' interface shows 10 destinations and 10 routes. The user then runs 'show route hidden' to see the 'inet.0' table again, where the 172.21.0.0/22 route is marked as 'Reject'. The Juniper logo is visible in the background of the terminal window.

```
[edit routing-options]
user@router# show
aggregate {
route 172.21.0.0/22;
}

[edit routing-options]
user@router# run show route protocol aggregate
inet.0: 21 destinations, 21 routes (20 active, 0 holddown, 1 hidden)
inet6.0: 10 destinations, 10 routes (10 active, 0 holddown, 0 hidden)

[edit routing-options]
user@router# run show route hidden
inet.0: 21 destinations, 21 routes (20 active, 0 holddown, 1 hidden)
+ = Active Route, - = Last Active, * = Both
172.21.0.0/22      [Aggregate] 00:12:09
                    Reject
inet6.0: 10 destinations, 10 routes (10 active, 0 holddown, 0 hidden)
```

Referring to the exhibit, you have configured an aggregate route that represents the 172.21.0.0/24, 172.21.1.0/24, and 172.21.2.0/24 networks. However, when you view the routing table, your new route hidden.

Which action would you perform to determine the problem?

- A. Verify that you have defined a metric value for the aggregate route.
- B. Verify that you have configured a policy on the device to accept aggregate routes.
- **C. Verify that you have set the preference to a lower default value.**
- D. Verify that you have active contributing routes on the device.

Answer: C

NEW QUESTION # 15

What are three types of interfaces that can be used in an MX Series device when implementing a virtual switch routing instance? (Choose three.)

- A. Logical tunnel interface
- **B. Access interface**
- **C. Layer 2 logical interface**
- D. GRE tunnel interface
- **E. Trunk interface**

Answer: B,C,E

NEW QUESTION # 16

Exhibit.

```
[edit routing-options]
user@router# show
aggregate {
route 172.21.0.0/22;
}

[edit routing-options]
user@router# run show route protocol aggregate

inet.0: 21 destinations, 21 routes (20 active, 0 holddown, 1 hidden)
inet6.0: 10 destinations, 10 routes (10 active, 0 holddown, 0 hidden)

[edit routing-options]
user@router# run show route hidden

inet.0: 21 destinations, 21 routes (20 active, 0 holddown, 1 hidden)
+ = Active Route, - = Last Active, * = Both

172.21.0.0/22      [Aggregate] 00:12:09
                    Reject
```

Referring to the exhibit, you have configured an aggregate route that represents the 172.21.0.0/24, 172.21.1.0/24, and 172.21.2.0/24 networks. However, when you view the routing table, your new route hidden. Which action would you perform to determine the problem?

- A. Verify that you have defined a metric value for the aggregate route.
- B. Verify that you have configured a policy on the device to accept aggregate routes.
- C. Verify that you have set the preference to a lower default value.**
- D. Verify that you have active contributing routes on the device.

Answer: C

Explanation:

The exhibit shows an aggregate route configuration for the network 172.21.0.0/22, which would summarize the specific networks 172.21.0.0/24, 172.21.1.0/24, and 172.21.2.0/24. For an aggregate route to be active, it must have contributing routes in the routing table. If the route is hidden, it usually means there are no contributing routes that are active or the policy applied to the aggregate does not match any of the specific routes. Therefore, the first step in troubleshooting would be to verify that there are indeed active contributing routes for the aggregate to be valid.

NEW QUESTION # 17

You have been asked to provision a service provider's network to accommodate Layer 3 VPNs as defined in RFC 4364. Which three tasks must be performed before the provider network is ready to carry VPN traffic? (Choose three.)

- A. All Juniper Networks PE routers must be configured with a routing-instance of type forwarding.
- B. All Juniper Networks PE routers must be configured with a routing-instance of type vrf.**
- C. All Juniper Networks PE routers must be configured with a routing-instance containing the CE-facing interface.**
- D. All Juniper Networks PE routers must be configured with an appropriate router-ID unique to the VPN.
- E. All Juniper Networks PE routers must be configured with an appropriate route-target unique to the VPN.**

Answer: B,C,E

NEW QUESTION # 18

When would you use the qualified-next-hop statement with a static route?

- A. You can use it to install the static route into different routing tables.
- B. You can use it to resolve the next hop if the next hop is not directly connected.
- C. You can use it to send unwanted traffic to a null route.
- D. You can use it to specify multiple next hops with different preferences.

Answer: D

Explanation:

<https://www.juniper.net/documentation/us/en/software/junos/static-routing/topics/topic-map/static-route-prefer-qualified-next-hop.html> Qualified next hops allow you to associate one or more properties with a particular next-hop address. You can set an overall preference for a particular static route and then specify a different preference for the qualified next hop. For example, suppose two next-hop addresses (10.10.10.10 and 10.10.10.7) are associated with the static route 192.168.47.5/32. A general preference is assigned to the entire static route, and then a different preference is assigned to only the qualified next-hop address 10.10.10.7.

NEW QUESTION # 19

• • • • •

When you see other people in different industry who feel relaxed with high salary, do you want to try another field? And is the difficulty of learning a new piece of knowledge often deterring you? It doesn't matter, now JN0-363 practice exam offers you a great opportunity to enter a new industry. Our JN0-363 learning material was compiled from the wisdom and sweat of many industry experts. And it is easy to learn and understand our JN0-363 exam questions.
