## Scrum SAFe Product Owner/Product Manager POPM (6.0) Sample Questions (Q51-Q56):

### NEW QUESTION # 51

In a 12-week PI, how often does the Innovation and Planning (IP) Iteration occur?

- A. Every two PIs
- B. Every two Iterations
- C. Once per year
- D. Every quarter

**Answer: D**

Explanation:

Explanation

The Innovation and Planning (IP) Iteration is a unique, dedicated iteration that occurs every Program Increment (PI). A PI is a timebox of 8 to 12 weeks, during which an Agile Release Train (ART) delivers incremental value in the form of working, tested software and systems. Therefore, in a 12-week PI, the IP Iteration occurs every quarter

### NEW QUESTION # 52

Which Product Owner responsibility supports the team with value delivery?

- A. Fostering Built-in Quality
- B. Testing benefit hypotheses
- C. Understanding market forces
- D. Supporting the Architectural Runway

**Answer: A**

Explanation:

Explanation

Fostering Built-in Quality is a Product Owner responsibility that supports the team with value delivery.

Built-in Quality is one of the four core values of SAFe® and it means that every aspect of the solution is continuously verified for quality<sup>1</sup>. The Product Owner fosters Built-in Quality in the following ways:

\*Collaborating with the Development team and other stakeholders to define clear and testable acceptance criteria for each work item<sup>2</sup>.

\*Participating in team events such as Iteration Planning, Backlog Refinement, and Iteration Review to provide feedback and guidance on the quality of the work<sup>2</sup>.

\*Reviewing and approving the work items that meet the Definition of Done and the acceptance criteria<sup>2</sup>.

\*Encouraging the team to apply Agile testing practices such as Test-First, Test-Driven Development, and Behavior-Driven Development<sup>3</sup>.

\*Supporting the team's continuous integration and continuous delivery practices to ensure fast and frequent feedback on the quality of the solution<sup>3</sup>.

Some additional information that might be helpful for you are:

\*The other options (A, B, and C) are not Product Owner responsibilities that support the team with value delivery, but rather responsibilities that belong to other roles or activities.

\*Understanding market forces is a responsibility of Product Management, who is accountable for the market and business aspects of the solution<sup>4</sup>.

\*Supporting the Architectural Runway is a responsibility of System Architects/Engineers, who provide technical guidance and enablement to the teams.

\*Testing benefit hypotheses is an activity that occurs in the Continuous Exploration step of the Continuous Delivery Pipeline, where Product Owners and Product Managers collaborate to validate their assumptions about the customer and the solution.

### NEW QUESTION # 53

What system delivers a product or service to a Customer?

- A. Dual Operating System
- B. Development Value Stream
- C. Operational Value Stream
- D. Kanban System

**Answer: C**

Explanation:

An Operational Value Stream (OVS) is the sequence of activities needed to deliver a product or service to a customer<sup>1</sup>. Examples include manufacturing a product, fulfilling an order, admitting and treating a medical patient, providing a loan, or delivering a professional service<sup>1</sup>. An OVS is the system that delivers value to the customer and generates revenue for the enterprise<sup>2</sup>. In SAFe, OVSs are the primary focus of the Customer Centricity competency, which aims to understand and meet the needs and expectations of the customer<sup>3</sup>.

Some additional information that might be helpful for you are:

\* The other options (A, C, and D) are not systems that deliver a product or service to a customer, but rather systems or concepts that support or enable the delivery of value.

\* A Kanban System is a method of visualizing and managing the flow of work in a value stream<sup>4</sup>. A Kanban System can be applied to any type of value stream, whether operational or developmental, to improve efficiency, quality, and predictability<sup>4</sup>.

\* A Development Value Stream (DVS) is the sequence of activities needed to convert a business hypothesis into a digitally-enabled solution that delivers customer value. A DVS is the system that develops and supports the solutions used by the OVSs. In SAFe, DVSs are the primary focus of the Agile Product Delivery competency, which aims to continuously explore, integrate, deploy, and release value.

\* A Dual Operating System is a concept proposed by John Kotter that describes the need for organizations to balance the traditional hierarchical structure with a more agile and networked structure. A Dual Operating System enables organizations to exploit their existing capabilities while exploring new opportunities for innovation and growth. In SAFe, a Dual Operating System is achieved by applying the Lean-Agile Leadership competency, which fosters a culture of learning and empowerment.

### NEW QUESTION # 54

In the Continuous Exploration phase of the Continuous Delivery Pipeline, what is a key activity performed by Product Managers and Product Owners?

- A. Ensure the Architecture team has sufficient capacity
- B. Hypothesize what would create value for Customers
- C. Prioritize the Team Backlog
- D. Negotiate Supplier contracts

**Answer: B**

Explanation:

The SAFe POPM workbook describes Continuous Exploration as the phase used to understand Customer needs . The Continuous Exploration model includes the activities Hypothesize, Collaborate and Research, Architect, and Synthesize , with Product Management involved in that flow. Therefore, the key activity is to hypothesize what would create value for Customers .

### NEW QUESTION # 55

What is the next action for improvement items identified during the Iteration Retrospective?

- A. They are given to the Scrum Master/Team Coach who resolves them
- B. They are ROAMed with the rest of the risks
- C. They are entered as Stories in the Team Backlog
- D. They are escalated to the Business Owners

**Answer: C**

Explanation:

Explanation

The next action for improvement items identified during the Iteration Retrospective is to enter them as Stories in the Team Backlog. By adding these improvement items as Stories, they become part of the team's ongoing work and are prioritized alongside other tasks and user stories for future iterations or sprints<sup>1</sup>. This way, the team can track and implement the improvement actions and measure their impact on the team's performance and quality<sup>2</sup>.
