PCNSE Reliable Test Practice | Valid PCNSE Exam Tips

The experts in our company have been focusing on the PCNSE examination for a long time and they never overlook any new knowledge. The content of our study materials has always been kept up to date. Don't worry if any new information comes out after your purchase of our PCNSE study guide. We will inform you by E-mail when we have a new version. With our great efforts, our study materials have been narrowed down and targeted to the PCNSE examination. So you don't need to worry about wasting your time on useless PCNSE exam materials information.

Palo Alto Networks Certified Network Security Engineer Exam Sample

Questions (Q137-Q142):

NEW QUESTION # 137
Given the following snippet of a WildFire submission log did the end-user get access to the requested information and why or why not?

- A. Yes, because the action is set to allow.
- B. No, because this is an example from a defeated phishing attack
- C. No, because the severity is high and the verdict is malicious.
- D. Yes, because the action is set to alert

Answer: A

Explanation:

NEW QUESTION # 138
An engineer is troubleshooting a traffic-routing issue.
What is the correct packet-flow sequence?

- A. PBF > Zone Protection Profiles > Packet Buffer Protection
- B. PBF > Static route > Security policy enforcement
- C. NAT > Security policy enforcement > OSPF
- D. BGP > PBF > NAT

Answer: B

Explanation:
The correct packet-flow sequence is C. PBF > Static route > Security policy enforcement. This sequence describes the order of operations that the firewall performs when processing a packet. PBF stands for Policy-Based Forwarding, which is a feature that allows the firewall to override the routing table and forward traffic based on the source and destination addresses, application, user, or service. PBF is evaluated before the static route lookup, which is the default method of forwarding traffic based on the destination address and the longest prefix match. Security policy enforcement is the stage where the firewall applies the security policy rules to allow or block traffic based on various criteria, such as zone, address, port, user, application, etc12. References: Policy-Based Forwarding, Packet Flow Sequence in PAN-OS

NEW QUESTION # 139
Which two subscriptions are available when configuring panorama to push dynamic updates to connected devices? (Choose two.)

- A. Content-ID
- B. Antivirus
- C. Applications and Threats
- D. User-ID

Answer: B,C

NEW QUESTION # 140
A company wants to install a PA-3060 firewall between two core switches on a VLAN trunk link. They need to assign each VLAN to its own zone and to assign untagged (native) traffic to its own zone which options differentiates multiple VLAN into separate zones?

- A. Create VLAN objects for each VLAN and assign VLAN interfaces matching each VLAN ID. Repeat for every

additional VLAN and use a VLAN ID of 0 for untagged traffic. Assign each interface/sub interface to a unique zone.

- B. Create V-Wire objects with two V-Wire interfaces and define a range of "0-4096 in the "Tag Allowed" field of the V-Wire object.
- C. Create Layer 3 subinterfaces that are each assigned tA. single VLAN ID and a common virtual router. The physical Layer 3 interface would handle untagged traffic. Assign each interface/subinterface tA. unique zone. Do not assign any interface an IP address.
- D. Create V-Wire objects with two V-Wire subinterfaces and assign only a single VLAN ID to the Tag Allowed" field of the V-Wire object. Repeat for every additional VLAN and use a VLAN ID of 0 for untagged traffic. Assign each iinterface/sub interface to a unique zone.

Answer: D

Explanation:
Explanation
https://docs.paloaltonetworks.com/pan-os/9-0/pan-os-admin/networking/configure-interfaces/virtual-wire-interfa Virtual wire interfaces by default allow all untagged traffic. You can, however, use a virtual wire to connect two interfaces and configure either interface to block or allow traffic based on the virtual LAN (VLAN) tags.
VLAN tag 0 indicates untagged traffic.You can also create multiple subinterfaces, add them into different zones, and then classify traffic according to a VLAN tag or a combination of a VLAN tag with IP classifiers (address, range, or subnet) to apply granular policy control for specific VLAN tags or for VLAN tags from a specific source IP address, range, or subnet.

NEW QUESTION # 141
Which configuration is backed up using the Scheduled Config Export feature in Panorama?

- A. Panorama running configuration and running configuration of all managed devices
- B. Panorama candidate configuration
- C. Panorama candidate configuration and candidate configuration of all managed devices
- D. Panorama running configuration

Answer: A

Explanation:
Explanation
