You know, the time is very tight now. You must choose a guaranteed product. D-ISM-FN-01 study materials have a 99% pass rate. This will definitely give you more peace of mind when choosing our D-ISM-FN-01 exam questions. In today's society, everyone is working very hard. If you want to walk in front of others, you must be more efficient. After 20 to 30 hours of studying D-ISM-FN-01 Exam Materials, you can take the exam and pass it for sure.

The reality is often cruel. What do we take to compete with other people? More useful certifications like D-ISM-FN-01 certificate? In this era of surging talent, why should we stand out among the tens of thousands of graduates and be hired by the company? Only if you pass the exam can you get a better promotion. And if you want to pass it more efficiently, we must be the best partner for you. Because we are professional D-ISM-FN-01 question torrent provider, we are worth trusting, because we make great efforts, we do better. Here are many reasons to choose us.

## Test D-ISM-FN-01 Testking | D-ISM-FN-01 Reliable Guide Files

Our D-ISM-FN-01 exam braindumps offer you a wide and full coverage of the keypoints on the career-oriented certification and help you pass the exam without facing any difficulty. And you will find that the subject is well compiled to the content of the D-ISM-FN-01 training guide in our three different versions. They are the PDF, Software and APP online. The content of these versions is the same, but the displays of our D-ISM-FN-01 learning questions are all different. You can choose the favorite one.

## EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q18-Q23):

### NEW QUESTION # 18

Question:

What are the two benefits of using sub-LUN tiering?

- A. Reduced need for storage capacity
- B. Reduced need for storage tiering policies
- C. Simplified storage management
- **D. Granular control over data placement**
- **E. Cost optimization**

**Answer: D,E**

Explanation:

Sub-LUN tiering allows for the movement of data at a more granular level within a Logical Unit Number (LUN), enabling:

- \* Granular control over data placement: Specific data blocks can be moved to appropriate storage tiers based on access patterns.
- \* Cost optimization: Frequently accessed data resides on high-performance (and more expensive) storage, while less accessed data is moved to cost-effective storage, optimizing overall storage costs.

Other options:

- \* Reduced need for storage capacity: Not directly impacted by sub-LUN tiering.
- \* Reduced need for storage tiering policies: Policies are still required to manage data movement.
- \* Simplified storage management: While sub-LUN tiering adds efficiency, it may introduce complexity in management.

## NEW QUESTION # 19

Question:

What is the first step in the machine learning process?

- **A. Collecting the datasets**
- B. Selecting the type of learning
- C. Analyzing the data
- D. Training the model

**Answer: A**

Explanation:

The first step in any ML project is to collect the datasets that will be used to train and validate the model.

This data collection step ensures you have enough representative examples.

After this, data is analyzed, learning type is chosen, and the model is trained.

## NEW QUESTION # 20

Question:

What is the main advantage of Network Attached Storage (NAS) systems over general-purpose servers?

- A. Increases data transfer speed
- **B. Centralizes and optimizes file sharing operations**
- C. Reduces the size of the object ID
- D. Supports FC protocols to access files over FC-SAN

**Answer: B**

Explanation:

NAS systems are purpose-built to handle file sharing and provide:

- \* Centralized file access for multiple clients.
- \* Optimized file sharing through dedicated hardware and software.
- \* Efficient management with file-level protocols (NFS, CIFS/SMB).
- \* FC protocols (Option B) are for block storage, not NAS.
- \* Object ID (Option C) relates to object storage, not NAS.
- \* Speed (Option D): While NAS can offer good speed, its main advantage is shared file access.

## NEW QUESTION # 21

Match each OSD (Object Storage Device) feature with its description:

OSD Features	Description	
Flexible data access method	Drives data placement and protection based on the service requirements	
Metadata-driven policy	Abstracts storage from the application and provides a common view independent of location	
Data protection	Supports REST/SOAP APIs and the file sharing protocols, CIFS and NFS, for file services	
Global namespace	Global distribution of objects using either replication or erasure coding	

**Answer:**

**Explanation:**

OSD Features	Description	
Flexible data access method	Drives data placement and protection based on the service requirements	Metadata-driven policy
Metadata-driven policy	Abstracts storage from the application and provides a common view independent of location	Global namespace
Data protection	Supports REST/SOAP APIs and the file sharing protocols, CIFS and NFS, for file services	Flexible data access method
Global namespace	Global distribution of objects using either replication or erasure coding	Data protection

Global namespace	Abstracts storage from the application and provides a common view independent of location

#Flexible data access method: Object storage can offer multiple ways to access and interact with stored data, such as REST/SOAP APIs (for object-based access) and file-sharing protocols (CIFS, NFS) for file-level access.

#Metadata-driven policy: Object storage uses rich metadata to define how objects are placed, protected, and managed, driven by policies that respond to service-level requirements.

#Data protection: Object storage systems implement data protection at a global scale through replication or erasure coding to ensure data durability and availability.

#Global namespace: Object storage abstracts physical locations, providing a single namespace (a unified view) so that applications can seamlessly access data regardless of where it physically resides.

## NEW QUESTION # 22

**Question:**

A Fibre Channel switch has eight ports, and all ports must be operational from 6 AM to 6 PM, Monday through Friday. However, a failure of Port 4 occurs within the week as follows:

\* Monday: 11 AM to 1 PM

\* Wednesday: 5 PM to 10 PM

\* Thursday: 7 AM to 10 AM

\* Saturday: 11 AM to 1 PM What is the availability of Port 4 in that week?

- A. 86.7%
- B. 90%
- C. 80%
- D. 81.6%

**Answer: A**

Explanation:

Total operational hours required: 12 hours/day × 5 days = 60 hours

Total downtime during required hours:

\* Monday: 2 hours

\* Wednesday: 1 hour (only 5 PM to 6 PM counts)
