AgilePM-Foundation学習資料、AgilePM-Foundation日本語版トレーニング

Agile Project Management (AgilePM) Foundation Examの調査の質問は、より専門的な質の高いサービスをユーザーにもたらすことができます。私たちの AgilePM-Foundation学習教材はユーザーに自信を与え、感情に強く依存します。ユーザーは AgilePM-Foundation試験で受験者に同行するため、候補者は学習コンテンツだけでなく、教えることだけでなく、彼の困難なヘルパーを共有しているので、私たちを信じて、私たちはとても専門的な会社です。これで、AgilePM-Foundationテストガイドのデモを無料でダウンロードして、詳細を理解できます。

APMG-International Agile Project Management (AgilePM) Foundation Exam 認定 AgilePM-Foundation 試験問題 (Q17-Q22):

質問 # 17

Identify the missing words in the following statement.

In projects, especially when using non-agile methods, governance often seems to focus on [?].

- A. Following a plan
- B. Process and tools
- C. Comprehensive documentation

- D. Contract negotiation

正解: A

解説:

Comprehensive and Detailed 150 to 300 words Explanation From Exact Extract of Agile Project Management (paraphrased): Agile principles highlight a contrast with traditional governance, which frequently centers on adherence to a predetermined plan. The Agile Manifesto instead values responding to change over following a plan. AgilePM operationalizes this by fixing time and cost, protecting quality, and flexing scope using MoSCoW prioritization. Planning remains essential, but it is lightweight, iterative, and continuously refined through empirical feedback from delivered increments. Governance, therefore, is reframed around evidence of value and outcomes rather than strict conformance to upfront schedules and documents. The statement points to the non-agile tendency to prioritize following a plan, which AgilePM deliberately rebalances with timeboxing, frequent review, and collaborative decision-making that allows teams to incorporate learning and change while keeping projects on track. Hence, the missing words are "Following a plan."

質問 # 18

If two separate development teams are required to work on the same project, how will this be managed?

- A. Each team will have a different Business Visionary
- **B. Both teams can share the same Product Owner**
- C. Each team will need a different Scrum Master
- D. There will be two projects with different project roles

正解: B

解説:

Comprehensive and Detailed 150-300 words Explanation (paraphrased from Scrum & AgilePM practice): When multiple teams build a single product within one project, effective backlog ownership and value alignment are critical. Scrum practice-and AgilePM when combined with Scrum-supports one Product Owner for the product, even when several teams deliver increments in parallel. A single Product Owner preserves a single ordered Product Backlog, unified priorities, and consistent acceptance criteria, minimizing conflicts and dependency churn. Each team may have its own Scrum Master to optimize facilitation and impediment removal locally, but the essential management mechanism for cross-team coherence is shared product ownership (one Product Owner) paired with lightweight cross-team planning and frequent integration. Splitting into two separate projects (with separate roles) for one product typically fragments value flow and complicates governance. Likewise, mandating different Business Visionaries per team dilutes accountability for the product outcome. Hence, the preferred and most effective approach is that both teams share the same Product Owner to maintain a single value and prioritization voice.

質問 # 19

Which of the common Agile concepts, behaviors, and techniques composes fixed periods of time, at the end of which an objective has been met?

- **A. Timeboxes (also known as sprints).**
- B. Minimum viable product.
- C. Full transparency.
- D. Focus on frequent delivery.

正解: A

解説:

* Timeboxing: Fixed time periods, such as sprints, are used to focus efforts and deliver outcomes within a predefined timeframe. This helps teams remain disciplined and maintain momentum while working iteratively.

* Other Options:

* A: Minimum viable product relates to the initial version of a product with essential features.

* C: Full transparency refers to visibility into the process.

* D: Frequent delivery is broader and does not imply fixed time periods.

Key AgilePM Concepts Referenced:

* Timeboxing: AgilePM Handbook, Chapter 3, Section 3.4.

質問 # 20

During what phase should the strategy for Iterative Development be considered?

- **A. Foundations**
- B. Evolutionary Development
- C. Feasibility
- D. Pre-Project

正解: A

解説:

The strategy for Iterative Development should be considered during the Foundations phase. This phase establishes a firm foundation for the project, ensuring that only the right projects are started and that they are set up correctly, considering aspects such as feasibility and business case. It's crucial to have a clear strategy for Iterative Development at this stage to guide the subsequent phases of the project effectively.

質問 # 21

Which of the following statements about an agile approach to projects is true?

Deploying the Solution incrementally throughout the project to validate the solution.

Early release of Solution Increments helps test assumptions about value.

- A. Only 1 is true
- **B. Both 1 and 2 are true**
- C. Only 2 is true
- D. Neither 1 or 2 is true

正解: B

解説:

Comprehensive and Detailed Explanation (verified, paraphrased from AgilePM principles):

AgilePM promotes incremental and iterative delivery, aiming to deploy usable increments early and often. Regular deployment and demonstration validate fitness for purpose, expose risks sooner, and provide empirical feedback for planning. Early release of increments also tests assumptions about value with real users and stakeholders, informing prioritization (e.g., MoSCoW) and shaping subsequent increments. This approach supports continuous learning, sharper benefits focus, and stronger financial governance, because funding and scope decisions can be based on evidence from working solution slices rather than predictions. Hence, both statements accurately reflect agile project delivery.

質問 # 22
