

PMHN-BC Fragen & Antworten & PMHN-BC Studienführer & PMHN-BC Prüfungsvorbereitung

PMHN-BC Pharmacology Test Questions With Complete Solution

- What class of drugs is atropine in? - Answer Anticholinergic
- What class of drugs is cogentin (benztropine mesylate) in? - Answer anticholinergic
- What class of drugs is dicyclomine (bentyl) in? - Answer anticholinergic
- What are the side effects of anticholinergics? - Answer dry out, blurred vision, dry eyes, constipation, urinary retention, postural hypertension, confusion, heart rhythm disturbance
- Why prescribe anticholinergics? - Answer ordered to reduce EPS caused by antipsychotics
- What class of drugs is chlorpromazine (thorazine) in? - Answer first generation antipsychotics
- What class of drugs is perphenazine (trilafon) in? - Answer first generation antipsychotics
- What class of drugs is haloperidol (haldol) in? - Answer first gen antipsychotics
- What are some side effects of antipsychotics? - Answer weight gain, hyperglycemia, EPS (dystonia, akathisia, tardive dyskinesia)
- Neuroleptic malignant syndrome: high fever, tachycardia, increased respiratory rate, AMS, muscle rigidity, high and low BP
- What class of drugs is Clozapine (Clozaril) in? - Answer 2nd generation antipsychotics
- What class of drugs is risperidone (risperdal) in? - Answer 2nd generation antipsychotics
- What class of drugs is olanzapine (zyprexa) in? - Answer 2nd generation antipsychotics
- What class of drugs is quetiapine (seroquel) in? - Answer 2nd generation antipsychotics

2026 Die neuesten ZertSoft PMHN-BC PDF-Versionen Prüfungsfragen und PMHN-BC Fragen und Antworten sind kostenlos verfügbar: <https://drive.google.com/open?id=1QbdxoI8tqQVUbbtcl2BvZ6IdtRFGIJb>

Die angemessene Bildung ist die Garantie des Erfolgs. Deshalb ist es sehr wichtig, diese Prüfung auszuwählen. Wir bieten Ihnen die neuesten und effektivsten Prüfungsfragen und Testantworten zur Nursing PMHN-BC Zertifizierung. Und Wir ZertSoft garantieren 100% Erfolg. Und der Preis ist auch günstig. Die Bezahlung bei Paypal kann Ihre Sicherheit garantieren. Wir ZertSoft bieten die besten Lernhilfe für Nursing PMHN-BC Prüfungen und auch aktualisieren immer die Prüfungsunterlagen.

Wenn Sie unsere Prüfungsmaterialien zur Nursing PMHN-BC Zertifizierungsprüfung kaufen, wird ZertSoft Ihnen den besten Service und die beste Qualität bieten. Unsere Nursing PMHN-BC Zertifizierungssoftware wird schon von dem Anbieter und dem Dritten autorisiert. Außerdem haben wir auch viele IT-Experten, die nach den Bedürfnissen der Kunden eine Serie von Produkten laut dem Kompendium bearbeitet. Die Materialien zur Nursing PMHN-BC Zertifizierungsprüfung haben einen hohen Goldgehalt. Sie können von den Experten und Gelehrte für Forschung benutzt werden. Sie können alle unseren Produkte teilweise als Probe vorm Kauf umsonst benutzen, so dass Sie die Qualität sowie die Anwendbarkeit testen können.

Nursing PMHN-BC Praxisprüfung - PMHN-BC Fragenpool

ZertSoft zusammengestellt Nursing PMHN-BC mit Original-Prüfungsfragen und präzise Antworten, wie sie in der eigentlichen Prüfung erscheinen. Eine der Tatsachen Sicherstellung einer hohen Qualität der ANCC Psychiatric–Mental Health Nursing Certification (PMHN-BC)-Prüfung ist die ständig und regelmäßig zu aktualisieren. ZertSoft ernannt nur die besten und kompetentesten Autoren für ihre Produkte und die Prüfung ZertSoft PMHN-BC zum Zeitpunkt des Kaufs ist absoluter Erfolg.

Nursing ANCC Psychiatric–Mental Health Nursing Certification (PMHN-BC) PMHN-BC Prüfungsfragen mit Lösungen (Q52-Q57):

52. Frage

The etiology of which disorder shows defects in Purkinje cells of the brain?

- A. autism spectrum disorder
- B. Rett syndrome
- C. post traumatic stress disorder
- D. eating disorders

Antwort: A

Begründung:

The etiology of which disorder shows defects in Purkinje cells of the brain?

tism spectrum disorder. Autism spectrum disorder (ASD) is characterized by significant challenges in social interaction and communication, along with restricted and repetitive behaviors. The neurological underpinnings of ASD involve various brain abnormalities, influencing its complex behavioral manifestations.

Among the affected structures in the brain, Purkinje cells in the cerebellum are notably implicated in ASD. These cells are crucial for motor coordination and also play a role in cognitive functions. In individuals with autism spectrum disorder, studies have consistently observed a reduction in the number of Purkinje cells. These cells, with their extensive dendritic arbors and a single long axon, are vital for transmitting information from the cerebellum to other parts of the brain. The defects in Purkinje cells can disrupt this connectivity and contribute to the cognitive and motor symptoms observed in ASD.

This disruption is significant because the cerebellum is not only involved in motor control but is also implicated in language and attention processes. Therefore, abnormalities in Purkinje cells can lead to broader neurological implications affecting various functional domains that are characteristic of autism spectrum disorder.

53. Frage

Which of the following signs and/or symptoms is least likely to be seen in a patient with a mild to moderate dependency on alcohol?

- A. weakness
- B. anxiety
- C. grand mal seizure
- D. hallucinations

Antwort: C

Begründung:

The question seeks to identify which symptom or sign is least likely to appear in patients with a mild to moderate alcohol dependency. Among the options given-'anxiety', 'hallucinations', 'weakness', and 'grand mal seizure'-the correct answer is 'grand mal seizure'. Let's explore why this is the case.

Anxiety, hallucinations, and weakness are symptoms that can be commonly observed in individuals who have a mild to moderate dependency on alcohol. Anxiety often arises as a symptom during the early stages of dependency and can manifest as a general sense of nervousness or unease. Hallucinations, although more severe, can still occur in moderate cases of alcohol misuse, particularly if the individual has a history of heavy drinking. Weakness, as a general symptom, can also be associated with the physical depletion caused by consistent alcohol consumption.

On the other hand, a grand mal seizure, characterized by violent muscle contractions and loss of consciousness, is not typically a direct symptom of mild to moderate alcohol dependency. Instead, grand mal seizures are more commonly associated with severe cases of alcohol withdrawal, specifically a condition known as delirium tremens. Delirium tremens is a severe form of alcohol withdrawal that is life-threatening and occurs when a heavy drinker suddenly stops or significantly reduces their alcohol intake. It typically emerges 48 to 72 hours after the last drink and is marked by confusion, rapid heartbeat, fever, and seizures.

Therefore, while anxiety, hallucinations, and weakness can be seen across various stages of alcohol dependency, grand mal seizures are specifically linked to the acute withdrawal phase in individuals with a severe dependency. This makes grand mal seizures the least likely symptom to be observed in someone with only a mild to moderate level of alcohol dependency, as they are indicative of a more severe and acute condition related to withdrawal rather than the dependency itself. Thus, the correct answer to the question is

'grand mal seizure'.

54. Frage

What model would be best for a patient with comorbid conditions?

- A. Containment
- **B. Whole person**
- C. Biologic
- D. Acute

Antwort: B

Begründung:

In the medical field, comorbid conditions refer to the presence of one or more additional diseases or disorders co-occurring with a primary disease or disorder. Managing a patient with comorbid conditions can be quite complex due to the different treatments and medications required for each condition. The best medical model to handle such situations is the whole person model.

The whole person model of care focuses on treating the person as a whole, rather than just focusing on the individual diseases or conditions. This approach takes into account the interactions between different diseases and conditions and how they can impact the overall health of the patient. It emphasizes the need to consider all aspects of a patient's health, including their physical, mental, and social well-being.

In the whole person model, the case manager plays a crucial role. They are responsible for coordinating the different treatments and services required by the patient. They ensure that all healthcare professionals involved in the patient's care are updated on the patient's condition and treatment progress. The case manager also works closely with the patient and their family to understand their needs and preferences, and to make sure the care provided aligns with these.

By using the whole person model, healthcare providers can provide more coordinated and comprehensive care to patients with comorbid conditions. This can lead to better health outcomes and improved patient satisfaction. Therefore, the whole person model is the best choice for a patient with comorbid conditions.

55. Frage

Which of the following would be considered an important role that the nurse can play in a patient's recovery?

- A. None of the above
- B. Role model
- C. Educator
- **D. Both A and B**

Antwort: D

Begründung:

The given question asks about the important roles a nurse can play in a patient's recovery. The options provided are "Educator," "Role model," and "Both A and B." The explanation for "Both A and B" is repeated for each option, suggesting that the roles of an educator and a role model are intertwined in nursing practice.

As an *Educator*, a nurse has a critical role in patient recovery by imparting necessary knowledge and skills. This includes educating patients about their health conditions, the importance of medication adherence, and lifestyle changes that promote wellness. In the context of managing emotions such as anger, a nurse educates patients on recognizing triggers, understanding the impact of their reactions, and employing strategies to express emotions constructively. This educational aspect is vital as it empowers patients to take an active role in their healing process and maintain their health post-recovery.

As a *Role Model*, a nurse exemplifies positive behavior through their own actions, demonstrating how to handle challenging situations with professionalism and emotional intelligence. For a patient struggling with anger management, observing a nurse manage stressful situations calmly can serve as a practical example to emulate. The role modeling extends beyond clinical skills to interpersonal interactions and self-care, reinforcing the lessons taught during educational sessions.

When considering the option "Both A and B," it indicates that the roles of being an educator and a role model are not mutually exclusive but are complementary. A nurse who effectively combines these roles enhances their impact on a patient's recovery. By teaching and demonstrating healthy behaviors, nurses facilitate a more comprehensive learning experience, helping patients to not only understand what should be done but also to see how it can be implemented in real life.

The option "None of the above" is incorrect as it negates the significant contributions of nurses in the roles mentioned. Both educating and role modeling are fundamental aspects of nursing that directly contribute to patient care and recovery. These roles are integral to guiding patients towards better health outcomes and equipping them with the tools needed for long-term wellness management. Therefore, "Both A and B" is the most accurate answer, encompassing the dual and synergistic roles of nurses as educators and role

models in patient recovery. By fulfilling these roles, nurses significantly influence the rehabilitation process, promoting better health behaviors and emotional management among patients.

56. Frage

What type of therapy uses interaction that is focused on the present to create empathy?

- A. Psychotherapy
- **B. Supportive psychotherapy**
- C. Psychodynamic therapy
- D. Psychoanalytical therapy

Antwort: B

Begründung:

The correct answer to the question of what type of therapy uses interaction that is focused on the present to create empathy is Supportive Psychotherapy.

Supportive psychotherapy is a therapeutic approach designed to improve, reinforce, or sustain a patient's psychological defenses, primarily in the face of stress, psychological distress, or dysfunction. This therapy is heavily influenced by psychodynamic and psychoanalytical traditions but differs significantly in its application and goals.

Unlike traditional psychoanalysis, which often delves into past experiences and the subconscious to uncover root causes of psychological issues, supportive psychotherapy concentrates on the present. The primary focus is on creating a supportive environment where the therapist actively helps the patient deal with their current feelings and problems. This approach is deemed particularly effective in helping individuals cope with immediate life challenges and mental health issues by fostering a sense of safety and understanding.

One of the critical elements of supportive psychotherapy is the development of empathy within the therapeutic relationship. Empathy in this context refers to the therapist's ability to understand and share the feelings of the patient, which is vital for providing emotional support and validation. By focusing on the present, the therapist can more directly address the immediate emotions and situations the patient is experiencing, which facilitates a more empathetic connection.

This therapy is often utilized in clinical settings where patients might not have the capacity or stability to engage in more intensive psychoanalytic treatment, such as those with severe mental health disorders, acute crises, or those in need of stabilization. The supportive nature of this therapy helps to strengthen the patient's existing coping mechanisms while preventing further psychological deterioration.

In summary, supportive psychotherapy is distinguished by its present-focused interaction aimed at bolstering the patient's current psychological defenses. It is characterized by the active role of the therapist in providing support, the emphasis on empathy within the therapeutic relationship, and its application in managing present symptoms and stressors rather than exploring historical causative factors.

57. Frage

.....

Trotzdem sagen viele Menschen, dass das Ergebniss nicht wichtig und der Prozess am allerwichtigsten ist. Aber diese Darstellung passt nicht in der Nursing PMHN-BC Prüfung, denn die Zertifizierung der Nursing PMHN-BC können Ihnen im Arbeitsleben in der IT-Branche echte Vorteile mitbringen. Wenn Sie Entschluss haben, die Prüfung zu bestehen, dann sollten Sie unsere Nursing PMHN-BC Prüfungssoftware benutzen wegen ihrer anspruchsvollen Garantie. Wenn Sie noch zögern, können Sie zuerst unsere kostenlose Demo der Nursing PMHN-BC probieren. Dadurch werden Sie empfinden die Konfidenz fürs Bestehen, die wir ZertSoft Ihnen mitbringen!
