High ITIL-4-Specialist-Create-Deliver-and-Support Passing Score & Accurate ITIL-4-Specialist-Create-Deliver-and-Support Answers

The ITIL-4-Specialist-Create-Deliver-and-Support study materials of our company is the study tool which best suits these people who long to pass the exam and get the related certification. So we want to tell you that it is high time for you to buy and use our ITIL-4-Specialist-Create-Deliver-and-Support Study Materials carefully. Now we are glad to introduce the study materials from our company to you in detail in order to let you understanding our study products.

ITIL 4 Specialist: Create, Deliver and Support Exam Sample Questions (Q26-Q31):

NEW QUESTION # 26

A service provider involves suppliers to resolve incidents related to third-party software. Resolution of such incidents typically takes longer because of the time required to contact a supplier and other delays. The service provider needs to involve the supplier every time a similar incident occurs again. The incident manager wants to reduce the costs and improve the timeliness of incident resolution. What is the BEST way for the incident manager to achieve this?

- A. Ensure that errors in the software that caused incidents are fixed
- B. Ensure that solutions provided by the supplier are tested
- **C. Ensure that solutions provided by suppliers are captured and shared in the support team**
- D. Avoid transferring incidents to an external supplier as long as possible

Answer: C

Explanation:

The best way is to ensure that solutions provided by suppliers are captured and shared within the support team (B). The ITIL 4 Specialist: Create, Deliver and Support guide (Section 4.3.4) recommends knowledge management as a key practice to reduce reliance on external suppliers by documenting and disseminating resolutions, thereby decreasing response times and costs for recurring incidents. This approach builds internal capability, minimizing delays from supplier coordination. Option A delays resolution; option C depends on supplier action beyond the manager's control; and option D, while beneficial, is a validation step that doesn't address knowledge retention. The guide underscores the importance of a knowledge base in incident management.

Reference: ITIL 4 Specialist: Create, Deliver and Support, Section 4.3.4 - Knowledge Management in Incident Resolution.

NEW QUESTION # 27

An organization with established processes for managing incidents, changes, and problems, receives a high volume of calls from users complaining that their issues are not being resolved efficiently. What should the organization do FIRST to start to improve the situation?

- A. Improve the integration of tools to ensure there are no gaps between processes
- B. Review skills and competencies of user support staff to ensure they have the required capability
- **C. Use value stream mapping to help understand the end-to-end flow of user support**
- D. Encourage teams to collaborate so they can focus on value for users

Answer: C

Explanation:

The organization should first use value stream mapping to help understand the end-to-end flow of user support (A). The ITIL 4 Specialist: Create, Deliver and Support study guide (Section 2.3.1) states: "Value stream mapping is the initial step to visualize and analyze the flow of activities, identifying inefficiencies and delays in service delivery processes." This provides a foundation for addressing user complaints by pinpointing bottlenecks before implementing solutions like collaboration (B), tool integration (C), or skill reviews (D). The guide emphasizes: "Mapping ensures a holistic view, essential for effective planning and improvement."

Reference: ITIL 4 Specialist: Create, Deliver and Support, Section 2.3.1 - Value Stream Mapping

NEW QUESTION # 28

A service provider works with a diverse group of customers, including corporate, private, and partner organizations. The service provider's service desk supports users from all customer organizations. However, different users prefer different communication channels. In response to their preferences, the service provider implemented email, chat, phone, and website contact form for the users to contact the service desk. The service desk team is increasingly struggling to monitor all channels and respond timely. Some user queries are not noticed early enough, and the users are complaining. What should the service provider do to improve the situation?

- A. Assign dedicated service desk agents to monitor each channel
- B. Close the least popular communication channels to reduce the complexity
- C. Allocate one most suitable channel to each customer type
- D. **Integrate all channels to support smooth switching between them for users and support agents**

Answer: D

Explanation:

The service provider should integrate all channels to support smooth switching between them for users and support agents (C). The ITIL 4 Specialist: Create, Deliver and Support documentation (Section 4.2.2) emphasizes the importance of a unified service desk experience, where channel integration enables a seamless omnichannel approach. This reduces the team's monitoring burden by centralizing interactions, ensures timely responses through a single queue or dashboard, and addresses user complaints by maintaining flexibility across preferred channels. Option A risks alienating users who rely on less popular channels; option B increases resource demands without addressing root issues; and option D limits user choice, potentially worsening satisfaction. The guide highlights that effective channel management enhances service desk efficiency, a critical aspect of supporting diverse customer bases.

Reference: ITIL 4 Specialist: Create, Deliver and Support, Section 4.2.2 - Omnichannel Service Desk Management.

NEW QUESTION # 29

What is the goal of the 'shift-left' approach?

- A. Integrating multiple suppliers in a value stream for effective service management
- B. Implementing Agile practices for continuous software development
- C. Automating repetitive processes using robots and AI
- D. **Repositioning tasks to earlier stages in the process to boost workflow efficiency**

Answer: D

Explanation:

The goal of the 'shift-left' approach is repositioning tasks to earlier stages in the process to boost workflow efficiency (A). The ITIL 4 Specialist: Create, Deliver and Support guide (Section 3.3.1) explicitly defines shift-left as a strategy to move activities, such as support or testing, closer to the point of origin—often to users or frontline teams—to reduce delays, improve response times, and enhance overall service delivery.

This approach leverages automation and self-service tools to empower users, thereby streamlining workflows and reducing the burden on higher-tier support teams. Option B focuses on automation alone, which is a supporting mechanism but not the core goal; option C relates to Agile methodologies, which are distinct from shift-left; and option D pertains to supplier integration, which is unrelated to this concept. The emphasis on efficiency is further supported by examples like self-service password resets, where tasks are shifted to users, aligning with ITIL's focus on value co-creation.

Reference: ITIL 4 Specialist: Create, Deliver and Support, Section 3.3.1 - Shift-Left Approach and Workflow Optimization.

NEW QUESTION # 30

An organization has departments that are structured as Sales, Business Operations, and Quality Control. Each department has its own set of responsibilities, reporting lines and authorities, and they manage their internal processes independently. What type of organizational structure is this an example of?

- A. Matrix
- **B. Functional**
- C. Flat
- D. Divisional

Answer: B

Explanation:

This is an example of a functional organizational structure (B). The ITIL 4 Specialist: Create, Deliver and Support documentation (Section 3.1.2) describes a functional structure as one where departments are organized by specialized functions (e.g., Sales, Operations, Quality Control), each with distinct responsibilities and independent processes. This structure supports service value system alignment by leveraging expertise but can create silos if not coordinated. Option A (matrix) involves cross-functional reporting; option C (divisional) focuses on product or region; and option D (flat) minimizes hierarchy, none of which match the description. The guide notes this structure's relevance in service management contexts.

Reference: ITIL 4 Specialist: Create, Deliver and Support, Section 3.1.2 - Organizational Structures.

NEW QUESTION # 31

.....

Everything is changing so fast. So do not reject challenging new things. Our ITIL-4-Specialist-CREATE-Deliver-and-Support study materials absolutely can add more pleasure to your life. You just need a chance to walk out. You can click to see the comments of the ITIL-4-Specialist-CREATE-Deliver-and-Support exam braindumps and how we changed their life by helping them get the ITIL-4-Specialist-CREATE-Deliver-and-Support Certification. And you can also see the pass rate of our ITIL-4-Specialist-CREATE-Deliver-and-Support learning guide high as 98% to 100%, we can give you a promising future.
