As the questions of our SAP-C02 exam dumps are reviewed with detailed notes and documents, it's a perfect for the SAP-C02 exam. It also has enough time to study twice of SAP-C02 exam's last day only. In this way, there is no need for you to worry about that something important have been left behind. Therefore, you will have more confidence in passing the exam.

100% Amazon SAP-C02 Real Questions

2023 SAP-C02 - 100% Free Real Questions | Reliable Reliable AWS Certified Solutions Architect - Professional (SAP-C02) Test Simulator

This course is ready to choosing updated materials and study every feature in the topic. The best way to avoid failure in your updated and real questions. YouChapters has come up with real Amazon SAP-C02

Amazon SAP-C02 Real Questions, Reliable SAP-C02 Test Simulator

What's more, part of that Prep4pass SOA-C02 dumps now are free: https://drive.google.com/open?id=1IJWfBRCdixWSQIV_yex7nQIp6DW33Uyd

Getting a certification is not only a certainty of your ability but also can improve your competitive force in the job market. SOA-C02 training materials are high-quality, and you can pass the exam by using them. In addition, we offer you free demo for you to have a try, so that you can have a deeper understanding of what you are going to buy. We are pass guarantee and money back guarantee, and if you fail to pass the exam by using SOA-C02 test materials of us, we will give you full refund. We have online and offline service, and if you have any questions for SOA-C02 exam dumps, you can contact us.

The SOA-C02 certification exam is intended for individuals who have at least one year of experience in operating and managing AWS applications. AWS Certified SysOps Administrator - Associate (SOA-C02) certification exam covers a wide range of topics, including deployment, monitoring, automation, and security. By passing this certification exam, individuals can demonstrate their knowledge and skills in managing and deploying applications on the AWS cloud platform, which can lead to better job opportunities and higher salaries.

The Amazon SOA-C02 exam consists of multiple-choice and multiple-response questions, and candidates are given two hours to complete it. SOA-C02 Exam covers a wide range of topics related to AWS services, including EC2, RDS, S3, VPC, and more. SOA-C02 exam also tests candidates on their ability to troubleshoot and resolve issues related to AWS services.

The SOA-C02 exam is intended for system administrators, DevOps engineers, and IT professionals who are responsible for managing and maintaining AWS systems. Candidates who pass SOA-C02 exam will receive the AWS Certified SysOps Administrator - Associate certification, which demonstrates their proficiency in AWS services and technologies.

Quiz Amazon - Efficient Hot SOA-C02 Questions

Good news comes that our company has successfully launched the new version of the SOA-C02 guide tests. Perhaps you are deeply bothered by preparing the exam; perhaps you have wanted to give it up. Now, you can totally feel relaxed with the assistance of our SOA-C02 actual test. Our products are definitely more reliable and excellent than other exam tool. What is more, the passing rate of our study materials is the highest in the market. There are thousands of customers have passed their exam and get the related certification. After that, all of their SOA-C02 Exam torrents were purchase on our website.

Amazon AWS Certified SysOps Administrator - Associate (SOA-C02) Sample Questions (Q591-Q596):

NEW QUESTION # 591

A company is using an Amazon Aurora MySQL DB cluster that has point-in-time recovery, backtracking, and automatic backup enabled. A SysOps administrator needs to be able to roll back the DB cluster to a specific recovery point within the previous 72 hours. Restores must be completed in the same production DB cluster.

Which solution will meet these requirements?

- A. Use backtracking to rewind the existing DB cluster to the desired recovery point.
- B. Create an AWS Lambda function to restore an automatic backup to the existing DB cluster.
- C. Create an Aurora Replica. Promote the replica to replace the primary DB instance.
- **D. Use point-in-time recovery to restore the existing DB cluster to the desired recovery point.**

Answer: D

NEW QUESTION # 592

A company is using a single AWS account to support a workload. A SysOps administrator is responsible for the security of the AWS account. The SysOps administrator must implement a solution to identify unusual API usage behavior by AWS users. Which solution will meet this requirement with the LEAST operational overhead?

- A. Generate an IAM credential report for the account. Review the results to identify anomalous user behavior.
- B. Create an AWS CloudTrail trail. Export CloudTrail logs to Amazon S3. Query the logs for anomalous user behavior.
- **C. Enable Amazon GuardDuty on the account. Review GuardDuty findings to identify anomalous user behavior.**
- D. Create VPC flow logs for all VPCs in the account. Use Amazon CloudWatch Logs Insights to query the logs for anomalous user behavior.

Answer: C

Explanation:

Enabling Amazon GuardDuty provides automated detection of anomalous activity, including unusual API usage, by continuously analyzing AWS CloudTrail logs (and other data sources) without requiring manual log analysis or additional infrastructure. This managed service minimizes operational overhead while meeting the requirement to identify unusual API behavior.

NEW QUESTION # 593

A SysOps administrator is responsible for a company's security groups. The company wants to maintain a documented trail of any changes that are made to the security groups. The SysOps administrator must receive notification whenever the security groups change.

Which solution will meet these requirements?

- **A. Set up AWS Config to record security group changes. Specify an Amazon S3 bucket as the location for configuration snapshots and history files. Create an Amazon Simple Notification Service (Amazon SNS) topic for notifications about configuration changes. Subscribe the SysOps administrator's email address to the SNS topic.**
- B. Set up AWS Systems Manager Change Manager to record security group changes. Specify an Amazon CloudWatch Logs log group to store configuration history logs. Create an Amazon Simple Notification Service (Amazon SNS) topic for notifications about configuration changes. Subscribe the SysOps administrator's email address to the SNS topic.
- C. Set up Amazon Detective to record security group changes. Specify an Amazon S3 bucket as the location for

configuration snapshots and history files. Create an Amazon Simple Notification Service (Amazon SNS) topic for notifications about configuration changes. Subscribe the SysOps administrator's email address to the SNS topic.

- D. Set up Amazon Detective to record security group changes. Specify an Amazon CloudWatch Logs log group to store configuration history logs. Create an Amazon Simple Queue Service (Amazon SQS) queue for notifications about configuration changes. Subscribe the SysOps administrator's email address to the SQS queue.

Answer: A

Explanation:

To maintain a documented trail of any changes made to the security groups and receive notifications, AWS Config is the best solution.

* AWS Config:

* AWS Config continuously monitors and records your AWS resource configurations and allows you to automate the evaluation of recorded configurations against desired configurations.

* You can set up AWS Config to record changes to your security groups.

* Setting Up AWS Config:

* Open the AWS Config console and choose "Set up AWS Config."

* Select the resource types you want to record (in this case, security groups).

* Specify an Amazon S3 bucket to store configuration snapshots and history files.

* Notifications:

* Create an Amazon SNS topic for notifications about configuration changes.

* Subscribe the SysOps administrator's email address to the SNS topic.

* AWS Config

* Setting Up AWS Config

NEW QUESTION # 594

A company runs a web application on three Amazon EC2 instances behind an Application Load Balancer (ALB). The company notices that random periods of increased traffic cause a degradation in the application's performance. A SysOps administrator must scale the application to meet the increased traffic.

Which solution meets these requirements?

- A. Create an Amazon CloudWatch alarm to monitor application latency and increase the size of each EC2 instance if the desired threshold is reached.
- B. Create an Amazon EventBridge (Amazon CloudWatch Events) rule to monitor application latency and add an EC2 instance to the ALB if the desired threshold is reached.
- C. Deploy the application to an Auto Scaling group of EC2 instances with a target tracking scaling policy. Attach the ALB to the Auto Scaling group.
- D. Deploy the application to an Auto Scaling group of EC2 instances with a scheduled scaling policy. Attach the ALB to the Auto Scaling group.

Answer: C

NEW QUESTION # 595

A company has a new requirement stating that all resources in AWS must be tagged according to a set policy.

Which AWS service should be used to enforce and continually identify all resources that are not in compliance with the policy?

- A. AWS Systems Manager
- B. AWS CloudTrail
- C. AWSConfig
- D. Amazon Inspector

Answer: C

Explanation:

Understand the Problem:

All AWS resources must be tagged according to a company policy.

Continuous identification and enforcement of non-compliant resources are required.

Analyze the Requirements:

Monitor resources for compliance with tagging policies.

Enforce tagging policies and provide ongoing compliance reporting.

Evaluate the Options:

Option A: AWS CloudTrail.

Tracks user activity and API usage but does not enforce tagging policies.

Option B: Amazon Inspector.

Provides security assessments but does not monitor or enforce resource tagging.

Option C: AWS Config.

Monitors and evaluates the configurations of AWS resources.

AWS Config rules can be used to enforce tagging policies and continuously monitor compliance.

Option D: AWS Systems Manager.

Provides operational insights and management but does not specifically enforce tagging compliance.

Select the Best Solution:

Option C: AWS Config is designed for compliance and configuration monitoring, making it the ideal service for enforcing and identifying non-compliant resource tags.

Reference:

AWS Config

Managing Resource Tag Compliance with AWS Config

AWS Config provides the necessary tools to enforce and monitor resource tagging compliance, ensuring all resources adhere to the set policy.
