dbt Analytics Engineering Certification Exam/ORC Certification Exam Graded questions with answers

What is the recommended approach for fixing a Database Error?

- 1) Review the warehouse documentation
- 2) Rewrite all SQL queries
- 3) Delete the entire project
- 4) Start a new dbt project - -CORRECT ANS- -Review the warehouse documentation.

To fix a Database Error, you should review the documentation of your data warehouse, such as Snowflake or BigQuery docs, to debug the specific error.

Reference:<https://docs.getdbt.com/guides/debug-errors?>

In a dbt project, what happens if a model fails during a CI build?

- 1) The model is automatically fixed by dbt
- 2) The CI build is considered successful
- 3) The CI build stops and the failure is reported
- 4) The model is excluded from future CI builds - -CORRECT ANS- -The CI build stops and the failure is reported.

If a model fails during a CI build in dbt, the build stops, and the failure is reported, preventing the faulty code from being merged into the main branch.

Review Key Concepts With dbt-Analytics-Engineering Exam-Preparation Questions

Learning is like rowing upstream; not to advance is to fall back. People are a progressive social group. If you don't progress and surpass yourself, you will lose many opportunities to realize your life value. Our dbt-Analytics-Engineering study materials goal is to help users to challenge the impossible, to break the bottleneck of their own. A lot of people can't do a thing because they don't have the ability, the fact is, they don't understand the meaning of persistence, and soon give up. Our dbt-Analytics-Engineering Study

Materials will help you overcome your laziness and make you a persistent person. Change needs determination, so choose our product quickly!

dbt Labs dbt Analytics Engineering Certification Exam Sample Questions (Q292-Q297):

NEW QUESTION # 292

You define several sources. However, some are frequently updated, while others rarely change. How can you optimize your dbt run command to account for this difference?

- A. Employ the defer option if downstream models permit and ensure freshness checks are adjusted.
- **B. Group sources based on update frequency and create separate dbt run commands for each group.**
- C. Include the -exclude flag along with less-frequently updated source names.
- D. Set up dbt schedules within your dbt_project.yml with different intervals for each group.

Answer: B

Explanation:

Separating dbt run commands offers immediate control without using advanced features like schedules or deferring. The other options have merit in specific scenarios.

NEW QUESTION # 293

(Multiple Select)

- A. database
- **B. test-paths**
- **C. model-paths**
- D. materialized: view

Answer: B,C

Explanation:

model-paths and test-paths specify project directory structures- Options C would be within a model configuration, and D could be in a profile.

NEW QUESTION # 294

You're integrating a new dbt package and find its models conflict with naming conventions in your existing project. Which approach generally provides the most flexible solution?

- A. Override the package's macros and redefine them within your project.
- B. Contact the package maintainers to request changes aligning with your conventions.
- **C. Utilize the dbt_project.yml file to re-alias the models provided by the package.**
- D. Manually edit the SQL within the conflicting package models.

Answer: C

Explanation:

Re-aliasing at the project level offers a centralized and maintainable way to manage naming conflicts. Editing package code directly should be avoided if possible.

NEW QUESTION # 295

Which of the following is NOT a direct benefit of thorough source, table, and column descriptions in dbt?

- A. Increased discoverability for other team members working on the project
- B. Better data quality due to the automated enforcement of column descriptions
- C. Improved lineage and data traceability within the documentation.
- **D. Faster dbt model compilation and execution times.**

Answer: D

Explanation:

Explanation: While good descriptions have numerous benefits, they don't inherently speed up model compilation and execution within dbt-

NEW QUESTION # 296

You've implemented the built-in `dbt.get_column_values` macro to display sample data values from a source column directly on the DAG. However, you notice performance issues when loading the docs. Which optimization strategy could you consider?

- A. Utilize a dbt snapshot to materialize the macro results instead of computing them on the fly.
- B. Increase the compute resources allocated to your dbt documentation generation process.
- C. Modify the macro to only retrieve sample values during development and not for production documentation.
- D. Replace `dbt.get_column_values` with a custom macro that only fetches the first few sample values.

Answer: A,C,D

Explanation:

B: Disabling expensive computations conditionally can boost performance for production environments. C: Snapshots pre-compute values, potentially improving DAG loading times. D: Reducing the amount of data retrieved by the macro could help with performance.

NEW QUESTION # 297
