NEW QUESTION # 22

What is the benefit of configuring user-defined Alert Policies in Prism Central?

- A. It automates VM migrations.
- B. It reduces the frequency of system updates.
- **C. It customizes alert thresholds.**
- D. It restricts network access for administrators.

Answer: C

Explanation:

The correct answer is A. It customizes alert thresholds.

User-defined Alert Policies in Prism Central allow administrators to define custom alert conditions and thresholds tailored to specific workload behaviors and operational requirements. This helps fine-tune monitoring by setting alert criteria for metrics such as CPU usage, memory utilization, IOPS, latency, etc., beyond the default system-generated alerts.

Key Capabilities Include:

- * Define conditions using predefined metrics.
- * Set thresholds and severity levels.
- * Associate alerts with specific entities like VMs, hosts, or clusters.
- * Integrate with email, SNMP, or third-party tools.

Prism Central UI Navigation Path:

Alerts & Monitoring > Alert Policies > Create Alert Policy

Official Reference:

* Nutanix Administration Guide - Alerts and Monitoring

* Excerpt: "User-defined alert policies in Prism Central allow administrators to define custom thresholds for system metrics, enabling more granular and proactive monitoring."

* Nutanix Prism Central Guide - Alert Policies Section

Conclusion: Custom alert policies do not automate VM migrations (C), limit access (B), or control update frequency (D). Only option A reflects the actual function.
