

NetSec-Pro Lead2pass | NetSec-Pro Practice Test Engine

What's more, part of that IteXamguide NetSec-Pro dumps now are free: https://drive.google.com/open?id=17TfPQ1_ysuXLd6VGK7QsFtg2be8tm21m

You don't need to worry about wasting your precious time but failing to get the NetSec-Pro certification. Many people have used our study materials and the pass rate of the exam is 99%. This means as long as you learn with our study materials, you will pass the NetSec-Pro exam without doubt. If any incident happens and you don't pass the NetSec-Pro Exam, we will give you a full refund. Our sincerity stems from the good quality of our products. We will give you one year's free update of the exam study materials. Now just make up your mind and get your NetSec-Pro exam torrent!

IteXamguide play the key role for assuring your success in Private Cloud Monitoring and Operations with NetSec-Pro exam. We incline your interest towards professional way of learning; motivate you to execute your learned concepts in practical industry. No more exam phobia exits if you have devotedly prepared through our NetSec-Pro Exam products, certain boost comes in your confidence level that routes you towards success pathway.

NetSec-Pro Practice Test Engine, Reliable NetSec-Pro Exam Simulator

Perhaps you are in a bad condition and need help to solve all the troubles. Don't worry, once you realize economic freedom, nothing can disturb your life. Our NetSec-Pro exam questions can help you out. Learning is the best way to make money. So you need to learn our NetSec-Pro guide materials carefully after you have paid for them. And in fact, our NetSec-Pro Practice Braindumps are quite interesting and enjoyable for our professionals have compiled them carefully with the latest information and also designed them to different versions to your needs.

Palo Alto Networks NetSec-Pro Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• NGFW and SASE Solution Functionality: This part assesses the knowledge of firewall administrators and network architects on the functions of various Palo Alto Networks firewalls including Cloud NGFWs, PA-Series, CN-Series, and VM-Series. It covers perimeter and core security, zone security and segmentation, high availability, security and NAT policy implementation, as well as monitoring and logging. Additionally, it includes the functionality of Prisma SD-WAN with WAN optimization, path and NAT policies, zone-based firewall, and monitoring, plus Prisma Access features such as remote user and network configuration, application access, policy enforcement, and logging. It also evaluates options for managing Strata and SASE solutions through Panorama and Strata Cloud Manager.

Topic 2	<ul style="list-style-type: none"> • GFW and SASE Solution Maintenance and Configuration: This domain evaluates the skills of network security administrators in maintaining and configuring Palo Alto Networks hardware firewalls, VM-Series, CN-Series, and Cloud NGFWs. It includes managing security policies, profiles, updates, and upgrades. It also covers adding, configuring, and maintaining Prisma SD-WAN including initial setup, pathing, monitoring, and logging. Maintaining and configuring Prisma Access with security policies, profiles, updates, upgrades, and monitoring is also assessed.
Topic 3	<ul style="list-style-type: none"> • Connectivity and Security: This part measures the skills of network engineers and security analysts in maintaining and configuring network security across on-premises, cloud, and hybrid environments. It covers network segmentation, security and network policies, monitoring, logging, and certificate management. It also includes maintaining connectivity and security for remote users through remote access solutions, network segmentation, security policy tuning, monitoring, logging, and certificate usage to ensure secure and reliable remote connections.

Palo Alto Networks Network Security Professional Sample Questions (Q19-Q24):

NEW QUESTION # 19

After a firewall is associated with Strata Cloud Manager (SCM), which two additional actions are required to enable management of the firewall from SCM? (Choose two.)

- A. Deploy a service connection for each branch site and connect with SCM.
- B. Configure a Security policy allowing "stratacloudmanager.paloaltonetworks.com" for all users.
- **C. Install a device certificate.**
- **D. Configure NTP and DNS servers for the firewall.**

Answer: C,D

Explanation:

To fully manage a firewall from Strata Cloud Manager (SCM), it's essential to establish trust and ensure reliable connectivity: Configure NTP and DNS servers

The firewall must have accurate time (NTP) and name resolution (DNS) to securely communicate with SCM and related cloud services.

"To ensure successful management, configure the firewall's NTP and DNS settings to synchronize time and resolve domain names such as stratacloudmanager.paloaltonetworks.com." (Source: SCM Onboarding Requirements) Install a device certificate A device certificate authenticates the firewall's identity when connecting to SCM.

"The device certificate authenticates the firewall to Palo Alto Networks cloud services, including SCM. It's a fundamental requirement to establish secure connectivity." (Source: Device Certificates) These steps ensure trust, secure communication, and successful onboarding into SCM.

NEW QUESTION # 20

How are policies evaluated in the AWS management console when creating a Security policy for a Cloud NGFW?

- A. The administrator sets a rule priority to determine the order in which they are evaluated.
- **B. They must be created in the order they are intended to be evaluated.**
- C. They can be dragged up or down the stack as they are evaluated.
- D. The administrator sets a rule order to determine the order in which they are evaluated.

Answer: B

Explanation:

Cloud NGFW Security Policies in the AWS Console are evaluated in the exact creation order- they do not have explicit rule priority fields.

"In AWS, security rules are evaluated in the order they are created. To ensure the correct evaluation logic, create them in the desired order from top to bottom." (Source: Cloud NGFW for AWS Policy Evaluation) Unlike Panorama, AWS-native management of Cloud NGFWs uses creation order as the evaluation sequence.

NEW QUESTION # 21

A network security engineer needs to implement segmentation but is under strict compliance requirements to place security enforcement as close as possible to the private applications hosted in Azure. Which deployment style is valid and meets the requirements in this scenario?

- A. On a PA-Series NGFW, configure several Layer 2 zones with Layer 2 interfaces assigned to logically segment the network.
- B. On a VM-Series NGFW, configure several Layer 2 zones with Layer 2 interfaces assigned to logically segment the network.
- **C. On a VM-Series NGFW, configure several Layer 3 zones with Layer 3 interfaces assigned to logically segment the network.**
- D. On a PA-Series NGFW, configure several Layer 3 zones with Layer 3 interfaces assigned to logically segment the network.

Answer: C

Explanation:

In cloud environments like Azure, the VM-Series NGFW is deployed to create Layer 3 segmentation zones closest to the application workloads.

"In Azure, deploy VM-Series firewalls in Layer 3 mode to enforce security policies closest to private applications, meeting strict compliance and segmentation requirements." (Source: VM-Series in Public Clouds) Layer 3 segmentation ensures security policies are enforced at the right boundary to isolate traffic within Azure's virtual networks.

NEW QUESTION # 22

How does a firewall behave when SSL Inbound Inspection is enabled?

- A. It decrypts traffic between the client and the external server.
- B. It decrypts inbound and outbound SSH connections.
- C. It acts transparently between the client and the internal server.
- **D. It acts as meddler-in-the-middle between the client and the internal server.**

Answer: D

Explanation:

SSL Inbound Inspection allows the firewall to decrypt incoming encrypted traffic to internal servers (e.g., web servers) by acting as a man-in-the-middle (MITM). The firewall uses the private key of the server to decrypt the session and apply security policies before re-encrypting the traffic.

"SSL Inbound Inspection requires you to import the server's private key and certificate into the firewall. The firewall then acts as a man-in-the-middle (MITM) to decrypt inbound sessions from external clients to internal servers for inspection." (Source: SSL Inbound Inspection)

NEW QUESTION # 23

Which NGFW function can be used to enhance visibility, protect, block, and log the use of Post- quantum Cryptography (PQC)?

- **A. Decryption policy**
- B. Decryption profile
- C. DNS Security profile
- D. Security policy

Answer: A

Explanation:

A decryption policy allows the firewall to inspect encrypted traffic and apply security controls to Post- quantum Cryptography (PQC) usage, as PQC algorithms are typically implemented within encrypted sessions.

"Decryption policies enable the firewall to see and control encrypted traffic. This visibility and control extend to new cryptographic algorithms, including PQC, to ensure that security measures are applied consistently." (Source: Palo Alto Networks Decryption Overview) By decrypting sessions, you ensure that even PQC traffic can be inspected, logged, and subject to security profiles for visibility and policy enforcement.

NEW QUESTION # 24

.....

Living in such a world where competitiveness is a necessity that can distinguish you from others, every one of us is trying our best to improve ourselves in every way. It has been widely recognized that the NetSec-Pro exam can better equip us with a newly gained personal skill, which is crucial to individual self-improvement in today's computer era. With the certified advantage admitted by the test NetSec-Pro Certification, you will have the competitive edge to get a favorable job in the global market. Here our NetSec-Pro exam braindumps are tailor-designed for you.
