2026 CheckPoint Professional 156-315.81: Check Point Certified Security Expert R81 Study Test

Our 156-315.81 exam braindumps are famous for the advantage of high-efficiency and high-effective. And it is proved by the high pass rate. The 99% pass rate is a very proud result for us. If you join, you will become one of the 99% to pass the 156-315.81 Exam and achieve the certification. Believe in yourself, you can do it! Buy 156-315.81 study guide now and we will help you. Believe it won't be long before, you are the one who succeeded!

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q527-Q532):

NEW QUESTION # 527
Which type of Endpoint Identity Agent includes packet tagging and computer authentication?

- A. Light
- B. Complete
- C. Custom
- D. Full

Answer: D

Explanation:
Explanation
The type of Endpoint Identity Agent that includes packet tagging and computer authentication is Full. Packet tagging is a feature that allows the Endpoint Identity Agent to add a tag to the packets sent by the user's device, which contains the user's identity information. This way, the Security Gateway can identify the user without requiring additional authentication methods. Computer authentication is a feature that allows the Endpoint Identity Agent to authenticate the user's device using a certificate, which ensures that only authorized devices can access the network resources. The Full Endpoint Identity Agent supports both packet tagging and computer authentication, as well as other features such as Single Sign-On (SSO), Multi-Factor Authentication (MFA), and VPN. The references are:

NEW QUESTION # 528
Bob needs to know if Alice was configuring the new virtual cluster interface correctly. Which of the following Check Point commands is true?

- A. cphaprob list
- B. cp hap rob state
- C. probcpha -a if
- D. cphaprob-aif

Answer: D

Explanation:
You can use the cphaprob -a if command to check the status of the virtual cluster interface1. This command displays the state, virtual IP address, and physical IP address of each cluster interface2. It also shows the load balancing method, the load on each interface, and the active member for each interface2. This command can help you verify that Alice configured the virtual cluster interface correctly and that it is working properly. To run this command, you need to access the cluster member in Clish and run cphaprob -a if1.

NEW QUESTION # 529
What is the recommended way to have a redundant Sync connection between the cluster nodes?

- A. Use a group of bonded interfaces. In the SmartConsole / Gateways & Servers -> select Cluster Properties / Network Management and define a Virtual IP for the Sync interface.
- B. In the SmartConsole / Gateways & Servers -> select Cluster Properties / Network Management and define two Sync interfaces per node. Connect both Sync interfaces without using a switch.
- C. In the SmartConsole / Gateways & Servers -> select Cluster Properties / Network Management and define two Sync interfaces per node. Use two different Switches to connect both Sync interfaces.
- D. Use a group of bonded interfaces connected to different switches. Define a dedicated sync interface, only one interface per node using the SmartConsole / Gateways & Servers -> select Cluster Properties / Network Management.

Answer: D

Explanation:
The recommended way to have a redundant Sync connection between the cluster nodes is to use a group of bonded interfaces connected to different switches. In the SmartConsole / Gateways & Servers -> select Cluster Properties / Network Management, you should define a dedicated sync interface, only one interface per node.

NEW QUESTION # 530
Which statement is most correct regarding about "CoreXL Dynamic Dispatcher"?

- A. The CoreXL FW instanxces assignment mechanism is based on Source MAC addresses, Destination MAC addresses
- B. The CoreXL FW instances assignment mechanism is based on the utilization of CPU cores
- C. The CoreXL FW instances assignment mechanism is based on IP Protocol type

- D. The CoreXl FW instances assignment mechanism is based on Source IP addresses, Destination IP addresses, and the IP 'Protocol' type

Answer: B

NEW QUESTION # 531

What is the minimum number of CPU cores required to enable CoreXL?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:
Explanation
Default number of CoreXL IPv4 FW instances:
Note: The real number of CoreXL FW instances depends on the current CoreXL license.
Number of
CPU cores Default number of
CoreXL IPv4
FW instances Default number of
Secure Network Distributors
(SNDs)
1 1
Note: CoreXL is disabled 0
Note: CoreXL is disabled
2 2 2
4 3 1
6 - 20 [Number of CPU cores] - 2 2
More than 20 (1) [Number of CPU cores] - 4 4

NEW QUESTION # 532

......

The cost of registering a CheckPoint 156-315.81 certification is quite expensive, ranging between $100 and $1000. After paying such an amount, the candidate is sure to be on a tight budget. SurePassExams provides CheckPoint 156-315.81 preparation material at very low prices compared to other platforms. We also assure you that the amount will not be wasted and you will not have to pay for the certification a second time. For added reassurance, we also provide up to 1 year of free updates. Free demo version of the actual product is also available so that you can verify its validity before purchasing. The key to passing the 156-315.81 Exam on the first try is vigorous practice. And that's exactly what you'll get when you prepare from our material. Each format excels in its own way and helps you get success on the first attempt.
