Salesforce Certified B2C Commerce Architect Sample Questions (Q52-Q57):

NEW QUESTION # 52

A third party survey provider offers both an API endpoint for individual survey data and an SFTP server endpoint that can accept batch survey data. The initial implementation of the integration includes

1. Marking the order as requiring a survey before order placement
2. On the order confirmation page, the survey form is displayed for the customer to fill
3. The data is sent to the survey provider API, and the order it marked as not requiring a survey Later it was identified that this solution is not fit for purpose as the following issues and additional requirements were identified:
 1. If the API call fails, the corresponding survey data is lost. The Business requires to avoid data loss.
 2. Some customers skipped the form. The Business require sending a survey email to such customers.
 3. The Order Management System (OMS) uses a non-standard XML parser it did not manage to parse orders with the survey, until the survey attribute was manually removed from the xml.

How should the Architect address the issues and requirements described above?

- A. Create a custom object when the survey is required Send to the API endpoint in real-time. On success, remove the object. On failure, capture the survey data in the custom object and later reprocess with a job. Use the custom object to send emails for the cases when survey was skipped.
- B. Send the survey data to the API endpoint in real-time until the survey data is successfully captured. Instruct the OMS development team to update their XML parser, use the Order survey attribute to send emails for the cases when the survey was skipped.
- C. Create a custom object to store the survey data. Send to the API endpoint using a job. On success, remove the custom object. On failure, send the survey data with API from the next execution of the same job. Use the custom object to send emails for the cases when the survey was skipped.
- D. Create a custom session attribute when the survey is required. Send to the API endpoint in real-time. On failure, capture the survey data in the session and reprocess, use me session attribute to send emails for the cases when survey was skipped.

Answer: A

NEW QUESTION # 53

A client has just pushed a new site live to Production. However during smoke testing. It's found that some customers are not seeing the correct pricing on the Product Detail Page.

What three places would the Architect begin to look for the cause of this Issue?

Choose 3 answers

- A. Check the Global Preferences to be sure the settings are correct.
- B. Check that the cache is set correctly
- C. Check the Quota Status page.
- D. Check Log Center
- E. Check that there was not an error during replication.

Answer: B,C,D

NEW QUESTION # 54

An Order Management System (OMS) handles orders from multiple brandspecific sites, as part of the processing, the OMS sends the processing detail to be added at notes to the orders in B2C Commerce. These processing details are captured temporarily in custom objects, and are later processed by a batch Job that:

* Processes the custom object to extract the orderid and note data.

* Tries to load the order.

* If the order is not found, it deletes the custom object and moves on.

* If the order is found, it updates notes In the Order, upon successful update of this order, it deletes the custom object.

There is an Issue reported that the job is constantly failing and custom objects are growing in number. On investigating the production look the message below is being logged on each failure:

```
Processing of custom object 1xoskncjdw687769 failed for order 1000000001 and has an associated replacement order 1000000001. Exception details:
com.demandware.core.quota.QuotaLimitExceededException: Limit for quota 'object.OrderPO.relation.notes' exceeded. Limit is 1000, actual is 1001. at
com.demandware.core.quota.QuotaExceededException.throwLimitExceed(QuotaExceededException.java:21) at
com.demandware.core.quota.QuotaImpl.handleHardLimitViolation(QuotaImpl.java:333) at
```

What are three solution The Architect can take to fix this issue without losing meaningful data?

Choose 3 answers

- A. Using BM site import/export, softenthe<quota id="object.orderPo.relation.notes"> <custom- action>warn<custom- action> </quots>to make sure that neither order notes are lost and custom object is processed.
- B. Take the backup of the custom object and delete the custom object to ensure on the next job run the custom objects are getting processed.
- C. Engage B2C Commerce Support Team to soften the quota limit for "object.OrderPO.relation.notes"
- D. Take the backup of the Order as XML and delete the notes from Order to ensure on the next jobrun the custom objects are getting processed.
- E. Take the backup of the Order as XML and delete the Order to ensure on the next job run, the custom objects are getting processed.

Answer: B,C,D

Explanation:

When facing an issue with a growing number of custom objects due to the exceeded quota limit for order notes, effective solutions include:

* Option C (Take the backup of the custom object and delete the custom object): This ensures that the data is preserved while freeing up space for new processes and reducing the load, allowing the job to continue running without the impediment of quota limits.

* Option D (Engage B2C Commerce Support Team to soften the quota limit for 'object.OrderPO.relation.notes'): Increasing the quota limit can resolve the root cause of the issue by accommodating the actual business needs without compromising the integrity of order processing and note addition.

* Option E (Take the backup of the Order as XML and delete the notes from Order): This allows the job to process the custom objects as intended in subsequent runs by clearing out space while ensuring the order data remains intact for business needs. These steps address the quota limit issue effectively without losing valuable order or note data, ensuring continuity and integrity of business operations.

NEW QUESTION # 55

Given a website launched to production, the Architect can rely on several SFCC Business Manager tools that provide an automatic notification feature.

Which three tools have such a feature and do not require to be monitored manually?

Choose 3 answers

- A. Analytics Conversion Reports
- B. Quota Status
- C. Job Schedules
- D. Pipeline Profiler
- E. Custom Log Settings

Answer: A,B,C

NEW QUESTION # 56

Our company is planning an integration with a 3rd party provider to get information about product rating. As an architect you're in charge of the Interface Specification Document so, you requested all needed information to the rating provider.

A few days later you receive an email with the desired information:

URL: `http://ratingservice.com/rating/{productID}`

User: ratingprovider

Pass: r\$aff2!_dA

Select 2 correct answers you should do as an architect after receiving this information:

- A. Use `dw.net.HTTPClient` to open connection and `setProtocol('secure')`
- B. Use service Framework and select service type HTTPS to make connection secure.
- C. Contact service provider and ask to for a URL over HTTPS protocol
- D. Use service Framework and verify service mode is live.

Answer: C,D

NEW QUESTION # 57

.....
