## 合格的なプロバイダー

最初の試行でJPNTest最短時間で220-1102認定を取得したい場合、効果的で便利な220-1102質問バンクほど刺激的なものはありません。220-1102トレーニング資料を早くCompTIA使用するほど、220-1102試験に合格する可能性が高くなり、220-1102証明書を早く取得できます。私たちの220-1102試験問題を必ず試してみる必要があります。間違いなく満足するでしょう。それに加えて、有効かつ正確な220-1102学習教材だけでなく、CompTIA A+ Certification Exam: Core 2優れたサービスも世界中のお客様から高く評価されています。

### CompTIA A+ Certification Exam: Core 2 認定 220-1102 試験問題 (Q832-Q837):

#### 質問 # 832

Users report that they can log in to the web application during business hours, but none of the application's functions are working properly. Company policy does not allow for the server to be rebooted during business hours. Which of the following should a technician do to fix the web application and follow company policy?

- A. Perform a Windows repair.
- **B. Restart services.**
- C. Add RAM to the server.
- D. Roll back Windows updates.

正解: B

解説:

Restarting services can resolve issues with web applications without requiring a full server reboot, which aligns with the company policy.

\* Restart services: Likely to resolve issues with the web application by refreshing the necessary services.

\* Roll back Windows updates: Unnecessary if the issue is with the application services.

\* Perform a Windows repair: More disruptive and not typically needed for application service issues.

\* Add RAM to the server: Would require a reboot and is not immediately necessary for troubleshooting application issues.

Reference: CompTIA A+ Exam Objectives [220-1102] - 3.1: Given a scenario, troubleshoot common Windows OS problems.

#### 質問 # 833

A customer recently experienced a power outage at a SOHO. The customer does not think the components are connected properly. A print job continued running for several minutes after the power failed, but the customer was not able to interact with the computer. Once the UPS stopped beeping, all functioning devices also turned off. In case of a future power failure, the customer wants to have the most time available to save cloud documents and shut down the computer without losing any data.

正解:

解説:

□ Explanation:

UPS > Surge protector = Computer, wifi router, cable modem

Surge protector = wallOutlet, printer and scanner

#### 質問 # 834

A user rotates a cell phone horizontally to read emails, but the display remains vertical, even though the settings indicate autorotate is on. Which of the following will MOST likely resolve the issue?

- A. Recalibrating the digitizer
- B. Recalibrating the compass
- C. Recalibrating the magnetometer
- **D. Recalibrating the accelerometer**

正解: D

解説:

When a user rotates a cell phone horizontally to read emails and the display remains vertical, even though the settings indicate

autorotate is on, this is typically due to a problem with the phone's accelerometer. The accelerometer is the sensor that detects changes in the phone's orientation and adjusts the display accordingly. If the accelerometer is not calibrated correctly, the display may not rotate as expected.

Recalibrating the accelerometer is the most likely solution to this issue. The process for recalibrating the accelerometer can vary depending on the specific device and operating system, but it typically involves going to the device's settings and finding the option to calibrate or reset the sensor. Users may need to search their device's documentation or online resources to find specific instructions for their device.

#### 質問 # 835

A user reports that a device with a statically defined IP is unable to connect to the internet. The technician runs the `ipconfig /all` command and sees the following output:

```
IPv4 Address..... 192.168.0.74
Subnet Mask.....255.255.255.255
Default Gateway..... 192.168.0.1
```

Which of the following is most likely the reason for the issue?

- A. The IP address is on the wrong subnet
- B. The user has an APIPA IP address.
- **C. The subnet mask is incorrect.**
- D. The default gateway is up.

正解: C

解説:

The `ipconfig /all` output shows the following:

```
IPv4 Address..... 192.168.0.74Subnet Mask..... 255.255.255.255Default Gateway..... 192.168.0.1
```

The issue with the subnet mask being set to 255.255.255.255 is that it specifies a single host subnet, meaning the device cannot communicate with other devices on the network or access the internet. The correct subnet mask for a typical home network should be:

\* Subnet mask of 255.255.255.0: This allows for communication within the same local network (192.168.0.0/24).

\* Default gateway 192.168.0.1: Correct, this is the typical address for the router.

\* IPv4 Address 192.168.0.74: Correct, within the correct subnet range.

Changing the subnet mask to 255.255.255.0 will resolve the connectivity issue.

Reference:

CompTIA A+ 220-1102 Exam Objectives, Section 2.5: Given a scenario, install and configure basic wired /wireless small office/home office (SOHO) networks.

IP addressing and subnetting documentation.

#### 質問 # 836

Which of the following environmental factors are most important to consider when planning the configuration of a data center? (Select two).

- **A. Temperature levels**
- B. Noise levels
- C. Cable management
- **D. Humidity levels**
- E. Lighting levels
- F. Location of the servers

正解: A、D

解説:

Temperature and humidity levels are the most important environmental factors to consider when planning the configuration of a data center, as they directly affect the performance, reliability, and energy efficiency of the IT equipment. Excessive heat or moisture can cause overheating, corrosion, condensation, or static electricity, which can damage the hardware and lead to data loss or service disruption. Therefore, data centers need to monitor and control the temperature and humidity levels within the recommended ranges by using various cooling systems, airflow management, and sensors<sup>12</sup>.
