

# Free PDF JN0-481 - High Pass-Rate Latest Data Center, Specialist (JNCIS-DC) Test Prep

2026 Latest Itexamguide JN0-481 PDF Dumps and JN0-481 Exam Engine Free Share: <https://drive.google.com/open?id=18RB6RgobckS-LFWK4RacIdddoUFVnJdd>

Juniper certification is very helpful, especially the JN0-481 which is recognized as a valid qualification in this industry. So far, JN0-481 free download pdf has been the popular study material many candidates prefer. JN0-481 questions & answers can assist you to make a detail study plan with the comprehensive and detail knowledge. Besides, we have money refund policy to ensure your interest in case of your failure in JN0-481 Actual Test. Additional, if you have any needs and questions about the Juniper test dump, our 24/7 will always be here to answer you.

To choose our Itexamguide to is to choose success! Itexamguide provide you Juniper certification JN0-481 exam practice questions and answers, which enable you to pass the exam successfully. Simulation tests before the formal Juniper certification JN0-481 examination are necessary, and also very effective. If you choose Itexamguide, you can 100% pass the exam

## JN0-481 New Study Materials & JN0-481 Real Exam Answers

The pass rate is 98% for JN0-481 training materials, and our exam materials have gained popularity in the international for its high pass rate. If you choose us, we can ensure that you can pass your exam just one time. In addition, JN0-481 exam dumps are high-quality, and you can use it with ease. You can obtain JN0-481 exam materials within ten minutes, and if you don't receive, you can email to us, and we will solve this problem for you immediately. You can enjoy the free update for 365 days after purchasing, and the update version for JN0-481 Exam Braindumps will be sent to you automatically, you just need to exam your email and change your practicing ways according to the new changes.

## Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q29-Q34):

### NEW QUESTION # 29

In the case of IP Clos data center five-stage fabric design, what are two roles of the super spines? (Choose two.)

- A. Super spines are always connected to an external data center gateway.
- **B. Super spines connect to all spine devices within the five-stage architecture.**
- C. Super spines are used to connect leaf nodes within a data center pod.
- **D. Super spines are used to interconnect two different data center pods.**

**Answer: B,D**

Explanation:

In the case of IP Clos data center five-stage fabric design, the super spines are the devices that provide the highest level of aggregation in the network. They have two main roles:

Super spines are used to interconnect two different data center pods. A pod is a cluster of leaf and spine devices that form a 3-stage Clos topology. A 5-stage Clos topology consists of multiple pods that are connected by the super spines. This allows for scaling the network to support more devices and bandwidth.

Super spines connect to all spine devices within the five-stage architecture. The spine devices are the devices that provide the second level of aggregation in the network. They connect to the leaf devices, which are the devices that provide access to the end hosts. The super spines connect to all the spine devices in the network, regardless of which pod they belong to. This provides any-to-any connectivity between the pods and enables optimal routing and load balancing.

### NEW QUESTION # 30

Which protocol is used to advertise EVPN routes?

- A. OSPF
- B. IS-IS
- **C. BGP**
- D. RIP

**Answer: C**

Explanation:

BGP is the protocol used to advertise EVPN routes. EVPN routes are a new type of BGP network layer reachability information (NLRI) that carry MAC address and IP prefix information for Ethernet VPNs. EVPN routes are exchanged between PEs using BGP multiprotocol extensions (MP-BGP) over MPLS, VXLAN, SR, or SRv6 tunnels. EVPN routes enable PEs to learn the reachability of MAC addresses and IP prefixes of different sites within the same EVPN instance.

EVPN routes also support various features such as fast convergence, redundancy, aliasing, and inter-subnet routing.

### NEW QUESTION # 31

What are two system-defined user roles that are available in Juniper Apstra? (Choose two.)

- **A. viewer**
- B. root
- C. authorized
- **D. user**

**Answer: A,D**

Explanation:

Juniper Apstra provides four system-defined user roles that are available in the Apstra GUI environment. They are: administrator, device\_ztp, viewer, and user. Based on the web search results, we can infer the following statements:

viewer: This role includes permissions to only view various elements in the Apstra system, such as blueprints, devices, design, resources, external systems, platform, and others. Users with this role cannot create, edit, or delete any element.

user: This role includes permissions to view and edit various elements in the Apstra system, such as blueprints, devices, design, resources, external systems, platform, and others. Users with this role cannot create or delete any element.

authorized: This is not a system-defined user role in Juniper Apstra. It is a term used to describe users who have been authenticated by an external system, such as LDAP, Active Directory, TACACS+, or RADIUS.

root: This is not a system-defined user role in Juniper Apstra. It is a term used to describe the superuser account on a Linux system, which has full access to all commands and files. Creating a user in the Apstra GUI does not provide that user access to the Apstra platform via SSH. To access the Apstra platform via SSH, you must create a local Linux system user.

### NEW QUESTION # 32

You have recently committed a change after creating a new blueprint in Juniper Apstra. In the main dashboard, you see a number of anomalies related to BGP. What is a likely cause of these anomalies?

- A. Spine-leaf links are incorrectly set.
- B. You have misconfigured ASNs.
- C. A generic system has not been configured.
- **D. The fabric has not converged yet.**

**Answer: D**

Explanation:

In Juniper Apstra, a blueprint is a logical representation of the network design and configuration.

When you create a new blueprint, you need to commit the changes to apply them to the network devices. However, committing the changes does not mean that the network is immediately updated and operational. It may take some time for the network to converge and reflect the new state of the blueprint. During this time, you may see some anomalies related to BGP in the main dashboard, which indicate that the BGP sessions are not established or stable between the devices. These anomalies are usually temporary and will disappear once the network converges and the BGP sessions are up and running.

### NEW QUESTION # 33

Referring to the exhibit, what is the minimum information you must add to create a new routing zone?

The screenshot shows the 'Create Routing Zone' form in the Juniper Apstra interface. The form has the following fields and sections:

- VRF Name\***: A text input field.
- VLAN ID\***: A text input field.
- VNI**: A text input field.
- Routing Policies**: A dropdown menu with 'Select...' as the current selection.
- Route Target Policies**: A section with two sub-sections:
  - Import Route Targets**: A button labeled 'Add Import Route Target'.
  - Export Route Targets**: A button labeled 'Add Export Route Target'.

At the bottom right of the form, there are two buttons: 'Create Another?' and 'Create'.

- A. VRF Name and Routing policies
- B. VRF Name, VLAN ID, VNI, Routing Policies
- C. VRF Name only
- **D. VRF Name, VLAN ID. And VNI**

**Answer: D**

Explanation:

To create a new routing zone, you must specify the VRF Name, VLAN ID, and VNI for the routing zone. These are the mandatory fields in the user interface shown in the exhibit. The VRF Name is the name of the L3 domain that isolates the IP traffic of the routing zone from other routing zones.

The VLAN ID is the identifier for the VLAN tagged Layer 3 links on external connections. The VNI is the VxLAN Network Identifier associated with the routing zone. The Routing Policies are optional fields that allow you to configure import and export route targets for the routing zone.
