What member of the Consolidation dimension represents the aggregated value before proportionalization and elimination?

- A. FCCS Entity Total
- B. FCCS Contribution
- C. FCCS Total Input And Adjusted
- **D. FCCS Entity Consolidation**

Answer: D

Explanation:

The member of the Consolidation dimension that represents the aggregated value before proportionalization and elimination is FCCS Entity Consolidation. This is the member that shows the data for each entity after currency translation but before applying ownership percentage, intercompany eliminations, or adjustments. It is also the member where input data for parent entities is stored. The other options are not members of the Consolidation dimension that represent the aggregated value before proportionalization and elimination. FCCS Entity Total is a member of the Account dimension, not the Consolidation dimension. It is used to aggregate data from all accounts in the application. FCCS Total Input And Adjusted is also a member of the Account dimension, not the Consolidation dimension. It is used to aggregate data from input accounts and adjustment accounts. FCCS Contribution is a member of the Consolidation dimension, but it represents the data for each entity after applying ownership percentage, not before.
