NEW QUESTION # 12

- A. EPGs contain endpoints that have common policy requirements such as security, virtual machine mobility, QoS, or Layer 4 to Layer 7 services.
- B. Endpoints have attributes and can only be virtual.
- C. Policies are applied to individual endpoints rather than EPGs for better efficiency.
- D. An EPG can be statically configured by an administrator in the Cisco APIC, or dynamically configured by an automated system such as vCenter or OpenStack.
- E. An EPG can only be configured statically by an administrator in the Cisco APIC.

NEW QUESTION # 13

- A. Configure IGMPv3 on the interfaces of IPN routers that face the Cisco ACI spine.
- B. Enable subinterfaces with dot1q tagging on all links between the IPN routers.
- C. Configure BGP as the underlay protocol in IPN.
- D. Enable DHCP relay on all links that are connected to Cisco ACI spines on IPN devices.

Answer: D

NEW QUESTION # 14
Refer to the exhibit.
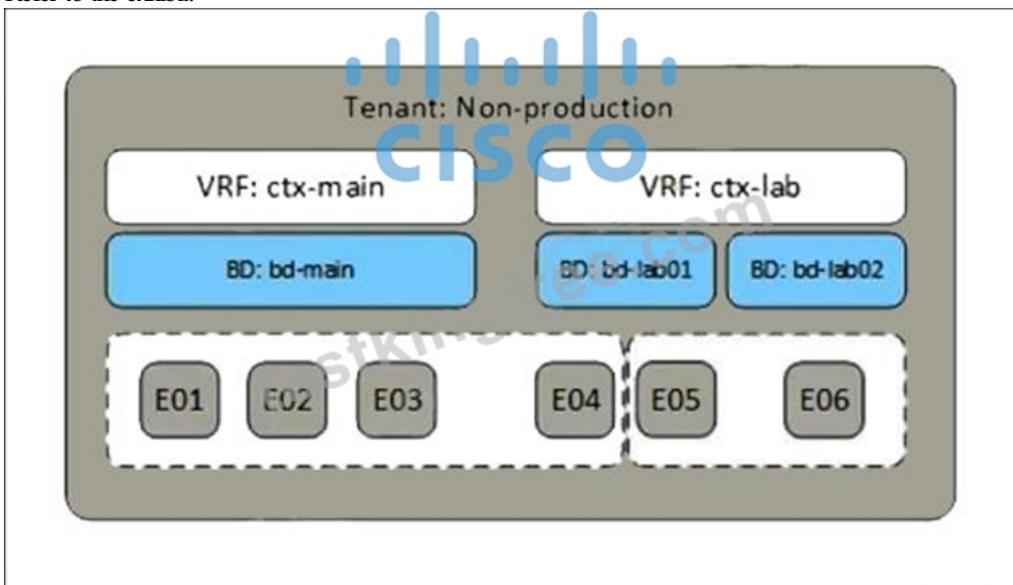

Refer to the exhibit. A network engineer must complete the Cisco ACI implementation based on the logical system design created by the systems architect. Which Cisco ACI object is required where the dotted line indicates to complete the task?

- A. attachable Access Entity Profile
- B. application profile
- C. contract
- D. context

Answer: C

Explanation:
In Cisco ACI, a contract is used to define the communication policy between EPGs (Endpoint Groups). It specifies which types of traffic are allowed to pass between EPGs and can include filters for protocols, ports, and other attributes. In the context of the logical system design, the contract would be the object that completes the communication requirements as indicated by the dotted line in the exhibit12.

NEW QUESTION # 16

Which method does the Cisco ACI fabric use to load-balance multidestination traffic?

- A. PIM routing
- B. spanning trees
- C. forwarding tag trees
  https://www.cisco.com/c/en/us/td/docs/switches/datacenter/aci/apic/sw/1-x/aci-fundamentals/b_ACI-Fundamentals/b_ACI-Fundamentals_chapter_010010.html

  The ACI fabric uses Forwarding Tag (FTAG) trees to load balance multi-destination traffic. All multi-destination traffic is forwarded in the form of encapsulated IP multicast traffic within the fabric. The ingress leaf assigns an FTAG to the traffic when forwarding it to the spine. The FTAG is assigned in the packet as part of the destination multicast address. In the fabric, the traffic is forwarded along the specified FTAG tree. Spine and any intermediate leaf switches forward traffic based on the FTAG ID. One forwarding tree is built per FTAG ID. Between any two nodes, only one link forwards per FTAG. Because of the use of multiple FTAGs, parallel links can be used with each FTAG choosing a different link for forwarding. The larger the number of FTAG trees in the fabric means the better the load balancing potential is. The ACI fabric supports up to 12 FTAGs.

- D. shortest-path trees

Answer: C
