## ISTQB Certified Tester Advanced Level - Test Manager Sample Questions (Q148-Q153):

### NEW QUESTION # 148

Which of the following statements is true regarding documentation standards?

- A. Agile projects consistently use level test plans and documentation standards.
- B. Documentation standards are a lower priority than testing standards.
- C. Documentation standards are determined by the Project Manager.
- D. Documentation standards can vary depending on the test level.

**Answer: D**

#### Explanation:

Documentation standards are not uniform across all test levels; they can differ based on the specific requirements of each level. For instance, unit testing may have different documentation needs compared to system testing. The ISTQB documentation standards recognize this variability and allow for flexibility to suit the context of the test level. This ensures that the documentation is appropriate for the objectives and constraints of each test level, providing clarity and efficiency in the testing process.

References: The ISTQB Advanced Level Test Manager syllabus and the ISTQB Glossary provide detailed information on documentation standards and their application across different test levels. These resources are essential for understanding the principles and practices of effective test documentation in various testing scenarios.

#### NEW QUESTION # 149

You are the Test Manager for a software house (SoftTech), who provide a core banking product to retail banks around the world to enable their customers to process payments via the Internet and telephone banking.

Your current project is to integrate SoftTech's core banking product with Welsh Bank's existing bank systems.

However, Welsh Bank's systems are maintained by experienced developers and are poorly documented.

Welsh Bank has stated that this project must comply with Financial Conduct Authority (FCA) regulatory banking standards.

A specification for the 10 interfaces to Welsh Bank's existing systems has been produced by SoftTech's development team.

You have been asked to plan and conduct reviews for the system integration and support documentation of all the systems. Which of the following is the BEST approach for this project?

SELECT ONE OPTION

- A. Conduct a management review to assess progress of the integration features.
- B. **Conduct Inspections to verify that all documentation conforms to a set standard.**
- C. Conduct an informal review of the integration documentation before the systems are integrated.
- D. Conduct an audit to verify that all test deliverables have been produced and signed off.

#### Answer: B

#### NEW QUESTION # 150

Test results are reported as "Requirements tested, passed, and failed".

What test strategy are you using? [1]

- A. Exploratory
- B. Reactive
- C. **Analytical**
- D. Model-based

#### Answer: C

#### Explanation:

An analytical test strategy is a test strategy that is based on the analysis of the factors that affect the quality of the software under test, such as the requirements, the risks, the complexity, or the criticality<sup>1</sup>. An analytical test strategy uses these factors to define the test objectives, scope, approach, and techniques, as well as to prioritize and allocate the test resources<sup>2</sup>. Reporting the test results as "Requirements tested, passed, and failed" implies that the testing is driven by the requirements, which are the specifications of the desired features and functions of the software under test. Testing based on the requirements is an example of an analytical test strategy, as it uses the requirements as the main factor to guide the testing activities. Therefore, option C is the correct answer.

Option A is incorrect because a model-based test strategy is a test strategy that uses models to represent the desired behavior and structure of the software under test, and to derive test cases, test data, test procedures, and test oracles. A model-based test strategy does not necessarily report the test results as "Requirements tested, passed, and failed", as it may use other types of models, such as state diagrams, data flow diagrams, or decision tables, to generate and execute the tests. Option B is incorrect because an exploratory test strategy is a test strategy that uses the tester's knowledge, skills, and creativity to design and execute tests dynamically, without predefined test cases or test procedures. An exploratory test strategy does not report the test results as "Requirements tested, passed, and failed", as it does not follow a formal or structured testing process, but rather relies on the tester's intuition, experience, and feedback. Option D is incorrect because a reactive test strategy is a test strategy that uses the actual behavior and results of the software under test to design and execute tests, without prior knowledge or documentation of the software. A reactive test strategy does not report the test results as "Requirements tested, passed, and failed", as it does not have any requirements or specifications to compare the software against, but rather uses the software itself as the test basis. ### NEW QUESTION # 151

Comparing TMMi and TPI, which is not a valid reason for choosing either TPI or TMMi? 2 credits

- A. TMMi can only be used with the traditional V model, whereas TPI can be used with all types of software life cycles.
- B. If the scope of test performance improvement covers all test levels, TMMi is preferred since TPI focusses mainly on black-box testing.
- C. If the organization is already applying CMMI, TMMi may be preferred since it has the same structure and uses the same terminology. TMMi addresses management commitment very strongly and is therefore more suitable to support a top-down improvement process.
- D. TPI is much more a bottom-up model that is suitable for addressing test topics for a specific (test) project.

**Answer: A**

### NEW QUESTION # 152

What is the purpose of tracking efficiency metrics for a formal review? [1]

- A. These metrics can be used to determine who participated in the review.
- B. These metrics can be used to determine if the review was a good use of resources.
- C. These metrics can be used to determine the quality of the reviewed object.
- D. These metrics can be used to determine the speed with which defects were fixed.

**Answer: B**

Explanation:

Efficiency metrics for a formal review are used to measure the cost-effectiveness of the review process, such as the time spent on the review, the number of defects found, and the return on investment. These metrics can help to evaluate if the review was a good use of resources, such as human effort, money, and tools.

Therefore, option B is the correct answer. Option A is incorrect because efficiency metrics do not track who participated in the review, but rather how they performed. Option C is incorrect because efficiency metrics do not measure the quality of the reviewed object, but rather the quality of the review process. Option D is incorrect because efficiency metrics do not measure the speed with which defects were fixed, but rather the speed with which defects were detected.
