Fortinet FCP—FortiAuthenticator 6.5 Administrator Sample Questions (Q61-Q66):

NEW QUESTION # 61

Which of the following services can be configured for remote authentication in FortiAuthenticator?

- A. Online shopping
- B. Social media integration
- C. Virtual reality gaming
- D. **Remote desktop access**

Answer: D

NEW QUESTION # 62

You want to monitor FortiAuthenticator system information and receive FortiAuthenticator traps through SNMP. Which two configurations must be performed after enabling SNMP access on the FortiAuthenticator interface? (Choose two.)

- A. Associate an ASN.1 mapping rule to the receiving host.
- B. Set the thresholds to trigger SNMP traps.
- C. Enable logging services.
- D. Upload management information base (MIB) files to SNMP server.

Answer: B,D

Explanation:

You must set thresholds that will trigger SNMP traps so FortiAuthenticator knows when to send alerts.

The SNMP server needs the appropriate MIB files uploaded to interpret FortiAuthenticator's SNMP data and traps correctly.

NEW QUESTION # 63

What are tokens commonly used for in authentication systems?

- A. Sending text messages
- B. Generating random security codes
- C. Storing biometric data
- D. Displaying the current time

Answer: B

NEW QUESTION # 64

What is the primary purpose of FortiAuthenticator portal services?

- A. To manage network firewalls
- B. To host gaming servers for multiplayer online games
- C. To create custom web portals for online shopping
- D. To authenticate and provide access to local and remote users

Answer: D

NEW QUESTION # 65

Which option correctly describes an SP-initiated SSO SAML packet flow for a host without a SAML assertion?

- A. Service provider contacts identity provider, identity provider validates principal for service provider, service provider establishes communication with principal
- B. Principal contacts service provider, service provider redirects principal to identity provider, after successful authentication identity provider redirects principal to service provider
- C. Principal contacts identity provider and is redirected to service provider, principal establishes connection with service provider, service provider validates authentication with identity provider
- D. Principal contacts identity provider and authenticates, identity provider relays principal to service provider after valid authentication

Answer: B

Explanation:

In SP-initiated SSO, the principal (user) first attempts to access the service provider. The service provider redirects the principal to the identity provider for authentication, and upon successful authentication, the identity provider redirects the principal back to the service provider with the SAML assertion.

NEW QUESTION # 66

.....
