Do you feel that you are always nervous in your actual 71301T exam and difficult to adapt yourself to the real exam? If you answer is yes, I think you can try to use the software version of our 71301T exam quiz. I believe the software version of our 71301T training guide will be best choice for you, because the software version can simulate real test environment, you can feel the atmosphere of the 71301T exam in advance by the software version.

Avaya Aura Communication Applications Implement Sample Questions (Q131-Q136):

NEW QUESTION # 131

In the context of Avaya Aura Presence Services 7.x, what is a Fetcher?

- A. It is a kind of watcher that requests a one-time view of the user's current presentity information, but does not get future presentity information for a user.
- B. It is the presence information about a user that the system reports.
- C. It is a watcher that is subscribing to current and future presentity information from another user.
- D. It is a user whose devices are sending status or presentity information on his behalf using a Publish message regarding his communication status.

Answer: A

Explanation:

Fetchers pull the value of presence information for a specific presentity from the presence service. If a fetcher is fetching information on a regular basis, it is called a poller. Subscribers, on the other hand, subscribe to presentity information on the presence service.

NEW QUESTION # 132

Which two configuration steps must be performed on the Avaya Aura Communication Manager (CM) for integrating it with the Application Enablement Services (AES), and enabling the TSAPI link? (Choose two.)

- A. Create a CTI link.
- B. Create a CTI user.
- C. Configure Switch Connection.
- D. Create a Signaling Group.
- E. Configure IP Services.

Answer: A,E

Explanation:

To successfully establish a TSAPI link between Communication Manager and AES, these two administrative steps within the CM SAT (System Administration Terminal) are mandatory:

Configure IP Services: You must define the service type as AESVCS (AES Services). This establishes the foundational IP-based communication channel between the CM and the AES server. You define the local node, the AES server's IP address, and the listening port (typically 8765) here.

Create a CTI Link: Once the IP service is established, you define the CTI link. This step links the AES application (the TSAPI provider) to the specific switch-side resources. You will configure the link type as ADJ-IP (Adjacent IP) and associate it with the previously configured AESVCS service.

NEW QUESTION # 133

From a remote worker's SIP Endpoint connected via Mobile Workspace, which tool is used to trace the successful way through Avaya Session Border Controller for Enterprise (SBCE) of an Invite message?

- A. traceRT
- B. traceSBC
- C. traceSM
- D. traceMW

Answer: C

Explanation:

traceSM is an interactive perl script that allows an administrator to capture, view, and save call processing activity on a Session Manager. While not as powerful or versatile as Wireshark, traceSM is absolutely essential when it comes to working with Avaya SIP. First off, it allows you to view SIP messages even if they have been encrypted with TLS.

NEW QUESTION # 134

In which two locations is the Switch Password configured?

- A. In 'cti-link' form on Avaya Aura Communication Manager (CM) and in 'TSAPI link' on Avaya Aura Application Enablement Services (AES)
- B. In 'cti-link' form on Avaya Aura Communication Manager (CM) and in 'Switch Connection' on Avaya Aura Application Enablement Services (AES)
- C. In 'ip-services' form on Avaya Aura Communication Manager (CM) and in 'TSAPI link' on Avaya Aura Application Enablement Services (AES)
- **D. In 'ip-services' form on Avaya Aura Communication Manager (CM) and in 'Switch Connection' on Avaya Aura Application Enablement Services (AES)**

Answer: D

Explanation:

Enabling AE Services refers to administering the transport link between Communication Manager and AE Services.

Procedure

1. Type change ip-services.

Communication Manager displays the IP SERVICES form

2. Complete Page 1 of the IP SERVICES form

3. Complete Page 3 of the IP SERVICES form as follows.

E. In the AE Services Server field, type the name of the AE Services server

F. In the Password field, create a password.

This is the password that the AE Services administrator must set on the AE Server (Communication Manager Interface > Switch Connections > Edit Connection > Switch Password).

The passwords must exactly match on both Communication Manager and the AE Services server.

NEW QUESTION # 135

Which three statements about Avaya Breeze are true? (Choose three.)

- A. It was formerly called Collaboration POD but has been renamed to Avaya Breeze.
- B. It does not require a license.
- **C. It is a development platform that enables rapid development for applications that are targeted to meet a customer's communications needs.**
- **D. It is used by Avaya, Partner, and Enterprise Developers.**
- **E. It allows application developers to quickly add new capabilities to their Avaya solutions.**

Answer: C,D,E

Explanation:

Avaya Breeze provides a virtualized and secure application platform where Java programmers can develop and dynamically deploy advanced collaboration capabilities that extend the power of Avaya Aura.

Customers, partners, and Avaya organizations can rapidly develop snap-ins and applications that are deployed on Avaya Breeze.

NEW QUESTION # 136

.....
