Free PDF 2026 Splunk SPLK-3002: Splunk IT Service Intelligence Certified Admin –Unparalleled Study Guide Pdf

If you are having the same challenging problem, do not worry, Itcertking is here to help. Our direct and dependable Splunk IT Service Intelligence Certified Admin Exam Questions in three formats will surely help you pass the Splunk SPLK-3002 Certification Exam. Because this is a defining moment in your career, do not undervalue the importance of our Splunk SPLK-3002 exam dumps.

Splunk IT Service Intelligence Certified Admin Sample Questions (Q61-Q66):

NEW QUESTION # 61

How do you automatically restrict a KPI to only the entities in its service, and generate KPI values for each entity?

- A. Select "Yes" for both "Split by Entity" and "Filter to Entities in Service".
- B. Select "No" for "Split by Entity" and "Yes" for "Filter to Entities in Service".
- C. Select "No" for both "Split by Entity" and "Filter to Entities in Service".
- D. Select "Yes" for "Split by Entity" and "No" for "Filter to Entities in Service".

Answer: A

NEW QUESTION # 62

Where are KPI search results stored?

- A. KV Store.
- **B. The itsi_summary index.**
- C. The default index.
- D. Output to a CSV lookup.

Answer: B

Explanation:

Search results are processed, created, and written to the itsi_summary index via an alert action.

Reference: <https://docs.splunk.com/Documentation/ITSI/4.10.2/SI/BaseSearch> D is the correct answer because KPI search results are stored in the itsi_summary index in ITSI. This index is an events index that stores the results of scheduled KPI searches. Summary indexing lets you run fast searches over large data sets by spreading out the cost of a computationally expensive report over time.

References: Overview of ITSI indexes

NEW QUESTION # 63

What are valid ITSI Glass Table editor capabilities? (Choose all that apply.)

- **A. Adding KPI metric lanes to glass tables.**
- **B. Service swapping configuration.**
- **C. Creating glass tables.**
- D. Correlation search creation.

Answer: A,B,C

Explanation:

Create a glass table to visualize and monitor the interrelationships and dependencies across your IT and business services.

The service swapping settings are saved and apply the next time you open the glass table.

You can add metrics like KPIs, ad hoc searches, and service health scores that update in real time against a background that you design. Glass tables show real-time data generated by KPIs and services.

Reference:

The glass table editor is a tool that allows you to create and edit glass tables in ITSI. Some of the capabilities of the glass table editor are:

Creating glass tables from scratch or from existing templates.

Configuring service swapping on widgets to toggle displaying metrics from different services.

Adding KPI metric lanes to glass tables to show historical trends of KPI values.

The glass table editor does not support correlation search creation, which is a separate feature in ITSI that allows you to create searches that look for relationships between data points and generate notable events. Reference: Overview of the glass table editor in ITSI, [Configure service swapping on glass tables], [Add KPI metric lanes to glass tables], [Overview of correlation searches in ITSI]

NEW QUESTION # 64

When must a service define entity rules?

- A. If some or all of the KPIs in the service will be split by entity.
- **B. If the intention is for the KPIs in the service to filter to only entities assigned to the service.**
- C. If the intention is for the KPIs in the service to have different aggregate vs. entity KPI values.
- D. To enable entity cohesion anomaly detection.

Answer: B

Explanation:

Provide a value to filter the service to a specific set of entities. These entity rule values are meant to be custom for each service.

Reference: <https://docs.splunk.com/Documentation/ITSI/4.10.2/SI/EntityRules> A is the correct answer because a service must define entity rules if the intention is for the KPIs in the service to filter to only entities assigned to the service. Entity rules are filters that match entities to services based on entity aliases or entity metadata. If you enable the Filter to Entities in Service option for a KPI, you need to define entity rules for the service to ensure that the KPI search results only include the relevant entities for the

service. Otherwise, the KPI search results might include entities that are not part of the service or exclude entities that are part of the service. References: [Define entities for a service in ITSI], [Configure KPI settings in ITSI]

NEW QUESTION # 65

When changing a service template, which of the following will be added to linked services by default?

- **A. New KPIs.**
- B. Health score.
- C. Entity Rules.
- D. Thresholds.

Answer: A

Explanation:

C) New KPIs. This is true because when you add new KPIs to a service template, they will be automatically added to all the services that are linked to that template. This helps you keep your services consistent and up-to-date with the latest KPI definitions. The other options will not be added to linked services by default because:

A) Thresholds. This is not true because when you change thresholds in a service template, they will not affect the existing thresholds in the linked services. You need to manually apply the threshold changes to each linked service if you want them to inherit the new thresholds from the template.

B) Entity rules. This is not true because when you change entity rules in a service template, they will not affect the existing entity rules in the linked services. You need to manually apply the entity rule changes to each linked service if you want them to inherit the new entity rules from the template.

D) Health score. This is not true because when you change health score settings in a service template, they will not affect the existing health score settings in the linked services. You need to manually apply the health score changes to each linked service if you want them to inherit the new health score settings from the template.

NEW QUESTION # 66

.....

If you are looking to be Splunk SPLK-3002 certified. Itcertking is here to provide you with the best Splunk IT Service Intelligence Certified Admin (SPLK-3002) exam dumps through which you can clear your Splunk IT Service Intelligence Certified Admin (SPLK-3002) certification exam.
