As for the C_BW4H_2505 study materials themselves, they boost multiple functions to assist the learners to learn the C_BW4H_2505 learning dumps efficiently from different angles. For example, the function to stimulate the exam can help the exam candidates be familiar with the atmosphere and the pace of the Real C_BW4H_2505 Exam and avoid some unexpected problem occur such as the clients answer the questions in a slow speed and with a very anxious mood which is caused by the reason of lacking confidence.

SAP Certified Associate - Data Engineer - SAP BW/4HANA Sample Questions (Q80-Q85):

NEW QUESTION # 80

You are allowed to run a BW query, but the data selection is only partially covered by your authorizations. What happens related to the BW query in this scenario?

- A. The BW query starts and only the authorized data is displayed.
- B. The BW query starts and shows an error message.
- C. The BW query starts and the unauthorized values are 0.
- D. The BW query does not start running.

Answer: A

NEW QUESTION # 81

Which SAP BW/4HANA objects support the feature of generating an external SAP HANA View? Note: There are 2 correct answers to this question.

- A. BW query
- B. Composite Provider
- C. Open ODS view
- D. Semantic group object

Answer: A,B

NEW QUESTION # 82

You created an Open ODS View on an SAP HANA database table to virtually consume the data in SAP BW/4HANA. Real-time reporting requirements have now changed you are asked to persist the data in SAP BW/4HANA.

Which objects are created when using the "Generate Data Flow" function in the Open ODS View editor?

Note: There are 3 correct answers to this question.

- A. CompositeProvider
- B. Transformation
- C. SAP HANA calculation view
- D. DataStore object (advanced)
- E. Data source

Answer: B,D,E

Explanation:

* Open ODS View: An Open ODS View in SAP BW/4HANA allows virtual consumption of data from external sources (e.g., SAP HANA tables). It does not persist data but provides real-time access to the underlying source.

* Generate Data Flow Function: When using the "Generate Data Flow" function in the Open ODS View editor, SAP BW/4HANA creates objects to persist the data for reporting purposes. This involves transforming the virtual data into a persistent format within the BW system.

* Generated Objects:

* DataStore Object (Advanced): Used to persist the data extracted from the Open ODS View.

* Transformation: Defines how data is transformed and loaded into the DataStore Object (Advanced).

* Data Source: Represents the source of the data being persisted.

Key Concepts: Objects Created by "Generate Data Flow": When you use the "Generate Data Flow" function in the Open ODS View editor, the following objects are created:

* DataStore Object (Advanced): This is the primary object where the data is persisted. It serves as the storage layer for the data extracted from the Open ODS View.

* Transformation: A transformation is automatically generated to map the fields from the Open ODS View to the DataStore Object (Advanced). This ensures that the data is correctly structured and transformed during the loading process.

* Data Source: A data source is created to represent the Open ODS View as the source of the data. This allows the BW system to extract data from the virtual view and load it into the DataStore Object (Advanced).

* B. SAP HANA Calculation View: While Open ODS Views may be based on SAP HANA calculation views, the "Generate Data Flow" function does not create additional calculation views. It focuses on persisting data within the BW system.

* E. CompositeProvider: A CompositeProvider is used to combine data from multiple sources for reporting. It is not automatically created by the "Generate Data Flow" function.

References: SAP BW/4HANA Documentation on Open ODS Views: The official documentation explains the "Generate Data Flow" function and its role in persisting data.

SAP Note on Open ODS Views: Notes such as 2608998 provide details on how Open ODS Views interact with persistent storage objects.

SAP BW/4HANA Best Practices for Data Modeling: These guidelines recommend using transformations and DataStore Objects (Advanced) for persisting data from virtual sources.

By using the "Generate Data Flow" function, you can seamlessly transition from virtual data consumption to persistent storage, ensuring compliance with real-time reporting requirements.

NEW QUESTION # 83

Which are purposes of the Open Operational Data Store layer in the layered scalable architecture (LSA++) of SAP BW/4HANA?

Note: There are 2 correct answers to this question.

- A. Transformations of data based on business logic
- B. Initial staging of source system data
- C. Harmonization of data from several source systems
- D. Real-time reporting on source system data without staging

Answer: A,C

NEW QUESTION # 84

What foundation is necessary to use SAP S/4HANA embedded analytics?

- A. SAP HANA optimized business content
- B. Generated external SAP HANA Calculation Views
- C. ABAP CDS view based virtual data model
- D. SAP Agile Data Preparation

Answer: C

NEW QUESTION # 85
