

NSE6_SDW_AD-7.6최신업데이트인증시험자료, NSE6_SDW_AD-7.6높은통과율덤프샘플다운

그 외, DumpTOP NSE6_SDW_AD-7.6 시험 문제집 일부가 지금은 무료입니다: <https://drive.google.com/open?id=16IXTqDWwBH-oAxxv3ushXprchoevRCYhn>

DumpTOP Fortinet NSE6_SDW_AD-7.6덤프 구매전 혹은 구매후 의문나는 점이 있으시면 한국어로 온라인서비스 혹은 메일로 상담 받으실수 있습니다. 기술 질문들에 관련된 문제들을 해결 하기 위하여 최선을 다 할것입니다. 고객님이 DumpTOP Fortinet NSE6_SDW_AD-7.6덤프와 서비스에 만족 할 수 있도록 저희는 계속 개발해 나갈 것입니다.

Fortinet NSE6_SDW_AD-7.6 시험요강:

주제	소개
주제 1	Centralized management: This domain focuses on deploying and managing SD-WAN using FortiManager for centralized control. It includes implementing branch configuration deployment and using SD-WAN Manager with overlay orchestration to simplify large-scale network management.
주제 2	Advanced IPsec: This section covers the deployment of advanced IPsec configurations within SD-WAN environments. It includes implementing hub-and-spoke IPsec topologies, configuring ADVPN, and supporting multihub, multiregion, and large-scale secure SD-WAN deployments.
주제 3	Rules and routing: This section explains how to design and apply SD-WAN rules to control traffic steering across multiple WAN links. It also includes configuring SD-WAN routing to ensure proper path selection and connectivity between networks.
주제 4	SD-WAN troubleshooting: This domain explains how to diagnose and resolve issues related to SD-WAN operation. It includes troubleshooting SD-WAN rules, session behavior, routing problems, and ADVPN connectivity to maintain reliable network performance.
주제 5	SD-WAN setup: This domain covers how to deploy an enterprise SD-WAN environment by designing SD-WAN members and zones and configuring them for efficient traffic management. It also focuses on implementing Performance SLAs to monitor link quality and ensure applications use the best available path.

What conclusions can you draw about the traffic received by FortiGate originating from the source LAN device 10.0.1.133 and destined for the company's SMTP mail server at 10.66.0.125?

- A. FortiGate steers the traffic from the LAN device 10.0.1.133 to the company SMTP mail server 10.66.0.125 through port2.
- B. FortiGate steers the traffic from the LAN device 10.0.1.133 to the company SMTP mail server 10.66.0.125 through the SD-WAN member ID 4.
- C. FortiGate steers the traffic from the LAN device 10.0.1.133 to the company SMTP mail server 10.66.0.125 through port3.
- D. FortiGate steers the traffic from the LAN device 10.0.1.133 to the SMTP mail server 10.66.0.125 through the SD-WAN member ID 1 or 2.

정답: C

You are using FortiManager to manage the branch devices and configure the SD-WAN template.

You update the configuration to address new user requirements and set the firewall policies shown in the second exhibit.

Then, when you use the install wizard to install the updated configuration and firewall policy package on the branch devices, FortiManager reports the error shown in the third exhibit.

Why can't FortiManager install the configuration on the branch devices?

- A. You must direct traffic with the default security profile to a VPN tunnel.
- **B. You cannot install firewall policies that reference an SD-WAN member.**
- C. You cannot install firewall policies that reference an SD-WAN zone.
- D. You cannot install firewall policies for HTTPS traffic with no SSL inspection.

정답: B

설명:

FortiManager SD-WAN templates require firewall policies to reference SD-WAN zones (or the virtual-wan-link abstraction), not individual SD-WAN member interfaces. In the exhibit, one of the policies directly uses a member interface (port1) instead of an SD-WAN zone, which causes validation and installation failure during the policy package deployment. FortiManager therefore rejects the installation because SD-WAN member-level references in policies are not supported in managed SD-WAN deployments.

질문 # 43

Which two features must you configure before FortiGate can steer traffic according to SD-WAN rules? (Choose two.)

- A. Firewall policies
- B. Security profiles
- C. Overlay links
- D. Traffic shaping
- E. Underlay links

정답: A,E

설명:

SD-WAN rule-based steering depends on having usable WAN paths defined in the SD-WAN fabric and a policy framework that allows traffic to be evaluated and redirected accordingly.

Underlay links must be configured so FortiGate has reachable physical or logical WAN interfaces to build SD-WAN paths and perform path selection. Firewall policies are also required because SD-WAN rules are evaluated within policy processing, and without an appropriate policy, traffic cannot be matched and steered through SD-WAN logic.

질문 # 44

You configured an SD-WAN rule with the best quality strategy and selected the predefined health check, Default_FortiGuard, to check the link performances against FortiGuard servers.

For the quality criteria, you selected Custom-profile-1.

Which factors does FortiGate use, and in which order, to determine the link that it should use to steer the traffic?

- A. Links that meet the SLA targets - Member configuration order - Member local cost
- B. Latency - Member configuration order - Link cost threshold
- C. Link quality index - Member configuration order - Link cost threshold
- D. Latency - Jitter - Packet loss - Bandwidth - Member configuration order

정답: C

설명:

FortiGate determines the member with the best quality using three factors: member configuration order, the link-cost-threshold setting, and the value of the metric measured for the member.

질문 # 45

You want FortiGate to use SD-WAN rules to steer local-out traffic.

Which two constraints should you consider? (Choose two.)

- A. You can steer local-out traffic only with SD-WAN rules that use the manual strategy.
- B. You must configure each local-out feature individually to use SD-WAN.
- C. By default, local-out traffic does not use SD-WAN.
- D. By default, FortiGate uses SD-WAN rules only for local-out traffic that corresponds to ping and traceroute.

정답: B,C

설명:

By default, local-out traffic does not use SD-WAN → FortiGate normally sends local-out traffic (e.g., DNS, NTP, FortiGuard updates) directly through its interfaces without applying SD-WAN rules.

You must configure each local-out feature individually to use SD-WAN → To steer local-out traffic via SD-WAN, you must explicitly configure the desired local-out features (e.g., DNS, FortiGuard, CAPWAP) to use SD-WAN rules.
